From: Tim Rapps
Topic: 1645 Message: 1651

Got it done, thanks again. Problem is, my Pro-96 is not nearly as sensitive (apparently), as my AOR AR3000. With an outdoor antenna connected, the 3000 picks up several control channels in the 774 to 776 freq. range. The Pro-96, however, only picks up one, and very faintly at that. The sensitivity level is not very good on the "out of band" frequencies on the Pro-96. I was kind of figuring it wouldn't be.

Rich Carlson <rich.n9jig@...> wrote: There is a check box that says something like "Enable extended frequencies". Click that and write to the radio. You can do this with the demo version and the radio will stay that way afterwards.

Yahoo group: StarCom21
Date: 2007-08-10 01:20:53 UTC
From: jburgess1974
Topic: 1657 Message: 1657

Evening all,

Today I was listening to my scanner at work and was picking up transmissions on ISP SpEvnt Z2A (TG13063) and ISP SpEvnt Z2B (TG13064). Sounds like these will be the channels for the State Fair in Springfield. Instead of using just HF-4 in previous years for all communication, know 13063 will be Fairground State Police Dispatch and 13064 will be used as Fairgrounds c2c.

On the State of Illinois issued Starcom 21 base radios if you press the #1
key it indicates the site the radio is currently affiliated with. It also
lists the RSSI (received signal strength indicator) on a number scale from 0 to
255. The higher the number the better the signal. I do not know what the
individual numbers relate to in actual signal strength. Currently (as of 1950
Hours today) the radio at my place of employment shows site 2 (Cook County,
south) with an RSSI of 27. It appears the Cook County north and Lake County sites
are still out of service. Normally this radio shows site 15 with an RSSI in
the upper 50's.

Remember there is no such thing as an ignorant question...

1678. TG 13106

Yahoo group: StarCom21
Date: 2007-08-13 15:48:57 UTC
From: Kevin
Topic: 1678 Message: 1678

I've heard a couple of voice transmissions on TG 13106 in the past week but I believe they were both due to a user having selected the wrong "channel" - one was a D18 trooper calling Litchfield and the other was a D22 trooper calling Ullin. Neither transmission was followed by further traffic on this TG. If nothing else, it indicates to me that this is a TG that is available in troopers' radios (at least in Zone 3) and that it might be a statewide TG (I'm hearing this from the Chicago burbs). Anyone else have more concrete info on the ID of this TG? FWIW, this is one TG above the statewide ISP Air Ops TG (13105).

Kevin

1679. Dist 10

Yahoo group: StarCom21
Date: 2007-08-13 19:55:48 UTC
From: Mike
Topic: 1679 Message: 1679

I heard a few cars coming on at 1500 hours today, they were calling in 10-41 and 10-42, there are some of them, that with every transmission ID which talkgroup they are on, for example. X-81 10-41, Talkgroup A.

I like the way Dist 19 goes 10-41/ 10-42. The dispatcher says, attention units 10-42 check, and then goes through the units, and they say they are 10-42 or they will need some overtime, it relieves the stress of waiting on everyone one by one, it sets the officers up on the dispatchers schedule, instead of burying the dispatcher when they are busy... but anyways...

All.....

To reduce rising costs of living, I am eliminating many email addresses and the web server that has been used the last 6 years to host ScanIl.com, W9VEY.net and I-WARN.org.

I plan on putting these websites back online, either at a free geocities-type site or if anyone has space available to host my pages.

My new and only email addresses will be:
- terry.weatherford@...
- iwarn@...
- tweatherford@... (Preferred)

No longer will be using (will be deactivating account in the next month or so):
terry.weatherford@... (and webmaster@)
terry.weatherford@... (and webmaster@)
terry.weatherford@... (and webmaster@)
terry.weatherford@... (and webmaster@)
terry.weatherford@... (and webmaster@)

In addition, any other email address "@" those accounts will go away too.

Please remove any of these email addresses from your address books.

Thanks for everything and all the support through the years and the continued future with RadioReference.com

Topic: 1680 Message: 1683

Jason,
Keep a listen on 42.36 at 6:00AM, 2:00PM, and 10:00PM at shift change when the dispather broadcast messages to all the cars. You will most likely hear a message telling the cars when they go 401/402 the next day to do so on Starcom. I know nothing was said at 10:00PM tonite on 8/13/07, so listen to the 6:00AM or 2:00PM shift change for the District 8 broadcast to all of the cars on Tuesday to see if anything is said.

Heard Dist 6 on T125 (Grundy) and T113 (Will) as well while out and about with some EMER button testing then what sounded like routine traffic. Also heard an ISPERN patch come up on 13032 during this time with very lousy audio.

Subject: [StarCom21] District 6 Pontiac now online

Now hearing Dist. 6 Pontiac full time on Starcom, the switch over schedule showed Aug. 13th and it appears they switched over today on TG 13000. Audio is kind of low but coming in clear on Peoria Simulcast Tower. Also hearing Dist. 10 Champaign TG 13007 on Peoria tower, I know they've been full time but today is first day i've been able to hear them.

Heard during road trip to State Fair today, 8/14/07 (I-55 Glen Carbon to I-55 Springfield)

20 Motorola Demo Group

9083 encrypted - Illinois State Police: Internal Investigations - Zone 1B
9089 Illinois State Police: Special Event - Zone 1A -- Talk about Admin Bldg @ State Fair

13004 D9 Dispatch A (one unit was traffic stop in Jacksonville-Morgan County)
13005 D9 Dispatch B
13006 D9 Dispatch C - Mary Units (12,13V,33,37,38,
***Couldn't tell any particular differences between A, B, C except as noted
13007 D10 Dispatch A (Xray K9 1)
13011 D20 Dispatch A
13034 D9 ISPERN Patch
13035 D10 ISPERN Patch
13046 D9 Car-to-Car
13063 Illinois State Police: Special Event - Zone 2A
13064 Illinois State Police: Special Event - Zone 2B
17003 D12 Dispatch A
17009 D18 Dispatch A
17052 D18 C2C
17076 encrypted Illinois State Police: Operational Services Command - Zone 3A

I just wonder if a lot of troopers don't turn off their home dispatch channels, they would overload the local site?
Mary 13 Victor was heard telling dispatcher that he is on his motorcycle, not in his car..... so wouldn't he be Mary 13 then?

Conventional Still in use
154.935 67.0 PL D9 dispatch to 8F13 and other units
151.25 151.4 PL 3J8 "Investigative Duties" with D9 dispatcher, 3J29
151.25 CSQ WYMJ295? 4J12 with Dispatcher on Edwardsville tower
155.505 146.2 PL sounded like car-to-car comms, not a Mobile Extender, but not sure (at fair)
42.66 D9 Dispatch, heard traffic

Sites
Did not detect any control channel on:

312

D18 Macoupin (Mount Olive)

774.33125*

774.58125*

or any activity on 774-774 MHz at all.
D18 Macoupin Nilwood -- add 775.05625 voice - could hear this site fine at the Mount Olive tower area.

Other
173.5875 CSQ talk about fire station .....probably Air National Guard - Ground Springfield

Misc updates to unid LTR-Spfld, PEC LTR and United Comm LTR will be done tomorrow.

AmerenIP

007

Mount Olive (Macoupin)

854.01250*

854.86250

855.73750

Detected that 855.7375 is now the control channel (or alternating?)

Will be returning to fair Saturday afternoon and evening for more monitoring.

Today, hearing 17018 as D11 dispatch with "Mary" units.

This has been listed to be D12 Detail A.... but appears to be D11 Detail C, although it sounds just like a dispatch channel, the same way that D9 Dispatch C was being used for Mary units. So this is going to shift numbers down, possibly D13 or D22 not having a detail C, which would make more sense anyway.

From: Andrew Perley
Topic: 1689 Message: 1689

Listed on RR:

13037 32ed D D20-ISPERN⋆P Illinois State Police: District 20 -
ISPERN Patch (heard 7/07)

Hearing traffic coordinating a landing zone with AirEvac, ambulance,
and state police-Maybe county. I think I heard a unit ID as "9062"

AirEvac was calling the channel "Long Mutual Aid (or something
sounding similar)" Also sounds like a Base station Identifying as
Monroe county

Traffic heard on Macomb Tower (224)
I'm wondering if this is actually an IREACH patch? I haven't heard
this traffic before on ISPERN. Not too familar with the area also, so
just going off of what I heard.

Any thoughts?

As long as we seem to have a number of other states coming in on these patches let me post the names that various states around us use for 155.4750. All are carrier squelch.

Illinois of course is ISPERN (Illinois State Police Emergency Radio Network)
Iowa is Mutual aid, or more commonly just plain old AID
Minnesota is MNSEF (Minnesota State Emergency Frequency)
Missouri is Mutual Aid or just plain AID
Wisconisn is WISPERN (Wisconsin Police Emergency Radio Net)

Jason McDowell <jasonpeoria911@...> wrote:

The "Long Mutual Aid" probably was "Law Mutual Aid." I have heard it referred to this in some areas, as to differentiate from fire mutual aid, etc.

The ISPERN patch on the Macomb tower picks up a lot of stuff from eastern Iowa. I heard Washington County, Iowa, (south of Iowa City) yesterday and have heard other southeast Iowa counties, too, on ISPERN through Starcom21 in Macomb.

UPDATES:

--District 20 seems to be patched into the Macomb tower full-time as I hear most District 20 stuff. District 20 seems to be full-time on Starcom now. I also hear a lot of thr Springfield groups on the Ellisville tower in Fulton County.

--I have heard both District 14 on the Macomb tower and District 7 on the Monmouth and Joy towers testing the radio alarms the past two days. I am guessing they are gearing up to go live next week with Starcom.

--Saw the Rockford ISPERN patch come through on the Macomb tower this morning.

D18 Disp A, announcing a severe thunderstorm warning until 10:30am for Greene County (@ 9:30),
was unable to tell if 42.5 was still used too.

D11 Disp B may also be BOLO such as it is for D9 Disp B (sounds like ISPERNs, but just the BOLOs they may give at the beginning of new shifts.

D11 ISPERN Patch --- Heard patch of District 22/Alexander County broadcast

1695. Ogle County S.O. on Starcom 21

Yahoo group: StarCom21
Date: 2007-08-16 19:23:56 UTC
From: Kevin
Topic: 1695 Message: 1695

Early this afternoon I heard (Ogle County S.O.?) unit "Adam 1" contact "Ogle County" on "Control 4" (SC21 TG 1026 via site 102) from a location in the Chicago burbs. I looked at both the Radio Reference SC21 page and the CARMA SC21 profile but didn't find Ogle County or this TG listed.

Is anyone familiar with Ogle County S.O. comms? Curious to know if the above unit identifier might be consistant with their radio numbering system. Also wondering if they assign "control" numbers to their conventional radio channels - if so, I'm guessing that "control 4" might be Starcom 21.

It depends on the tower....

Jasper County IL I can Dist 10, and Dist 12, with the Clay County Tower I can get I think Dist 19 and Dist 12, I get Wayne County tower Dist 19, and Dist 13.

So in total I can monitor 10, 12, 13, and 19, at times 11 and 22

1699. Dist. 8 Peoria now full time

Yahoo group: StarCom21
Date: 2007-08-16 23:02:39 UTC
From: Jason McDowell
Topic: 1699 Message: 1699

Just FYI, Peoria State Dist. 8 has gone full time on Starcom as of 9am this morning. TG's 13002 and 13003 for dispatches and 13045 for car to car. Not exactly sure how they have the 2 dispatch groups setup but heard a couple dispatches on the E side of the river for 13002 and couple dispatches for the W side of the river for 13003 and nothing on mixed sides so maybe thats how they have it setup. Currently Districts 6, 8 and 9 are full time on Peoria simulcast tower since they've gone full time. I heard Dist. 14 and Dist. 7 loud and clear testing handheld emergency buttons few days ago, so those should both be monitorable on the Peoria tower also. Golly, I might have to get a 396T just for starcom monitoring lol.

1703. District 20 on STARCOM

Yahoo group: StarCom21
Date: 2007-08-17 02:07:33 UTC
From: Jesse Risley
Topic: 1703 Message: 1703

District 20 has been operating on STARCOM for the past week or so. Most of their traffic has just utilized TG 13011 on the Macomb and Augusta towers. I also heard District 9 (TG 13004) from the Pittsfield and Mt. Sterling towers the past few days.

All of the older District 14 cars that I've seen the past two days have suddenly been missing the old lowband whips, with the black plug as the only remnant of the old lightning rods. There has been less traffic on District 14 lowband frequencies and more traffic on the HF channel - but they have yet to complete the switch to STARCOM 21.

"There is only one difference between a long life and a good dinner: that, in the dinner, the sweets come last."

1704. SC21 Traffic

Yahoo group: StarCom21
Date: 2007-08-17 01:32:40 UTC
From: tweatherford@RadioReference.com
Topic: 1686 Message: 1704

Hearing traffic on 17040 D18 ISPERN now, calling the channel "Mutual Aid", could not identify units.

Band appears to be open after the storm that just went in...

Also picking up 153.755R 114.8 PL Sheriff/Rural Law Dispatch for "xxx County" sounds like Clinton, but can't really tell.
Units 982, "Signal 8", also sound like another unit calling "City" (instead of county) and was a different dispatcher

Also, just heard district 11 come through on 155.505 CSQ (Mobile Extenders) while dispatch on 155.475.

Now hearing District 11 talk to Fairview Heights PD on 155.475, can not hear mobile.
Can hear both on D11 ISPERN patch and momentarily heard the FH PD unit on 17040 D18 ISPERN.

also just picked up Carlinville Police on 155.52 D351

1706. Starcom21 site frequencies on Radioreference

Yahoo group: StarCom21
Date: 2007-08-17 02:55:12 UTC
From: citrus801
Topic: 1706 Message: 1706

Terry,

How do you list the frequencies for the Starcom21 sites on Radiorefererence.com: by license or confirmed usage?

For example, the Starcom21 Radioreference page shows the following for site 203 (Champaign)...
854.96250
866.41250
866.51250*
866.93750*
867.21250
867.46250*
867.98750

But pro96com today shows only 5 frequencies currently active...
"00-0633","vi",854.96250
"00-2549","c",866.93750
"00-2633","av",867.46250
"00-2665","",867.66250
"00-2717","vi",867.98750

Pro96com doesn't show 866.5125 as an active freq in the system yet Radioreference.com shows it as a control channel. Is the purpose of the control channel indicator on Radioreference.com to be representative of the current control channels used at that site? If we see freqs listed as control channels that Pro96com doesn't show as active or alternate control channels, should we submit that as an update/correction? If so, I'll take a look at the sites I can receive and see if some submissions are in order.

Thanks for everyone's reports on the system.

1710. Today's Traffic

Yahoo group: StarCom21
Date: 2007-08-18 01:55:30 UTC
From: tweatherford@RadioReference.com
Topic: 1694 Message: 1710

17018, previously listed as Dist 12 detail A, was in major use this morning by D11, dispatcher and mobiles.
I previously noted I believe it may be D11 Detail C (as it is right after 17017 detail B)

Question... "What is Detail" wouldn't it be units assigned to "a detail" so all traffic on the frequency would be the same thing like a speed/radar trap/detail on the interstate or a DUI checkpoint?

17102 Radio Techs -- casual talk, plus talk of a site somewhere that has problem been shot out by rifle, pieces disintegrated all over the ground, have to order new parts for most of the electronics, not a lightning strike.
7142 encrypted (St. Clair County unid)

So for District 11 Collinsville
17000 Disp A - General Dispatch - Troopers
17001 Disp B - BOLO's/General Dispatch
17002 Disp C - General Dispatch - Investigations/Motorcycle (6-Ida, 35-Ida-, Mary xx, AV-xxx)
17016 Detail A - heard in use
17017 Detail B - heard in use
17018 Detail C OR Disp D

District 18
17009 Disp A - All Dispatch including "SC" Scale Units

Here in the center of Illinis, they also operate out of Lincoln, Springfield, and fly into Peoria, has anyone heard any radio traffic from Life Flight or AMT (Advanced Medical Transport ?
Just curious, still wonder if Fulton, Mason, Peoria or Tazewell Sheriffs Dept. will ever sign on to the SC21 system, or even have it in the cars. Heard some comments from a couple of the departments, but its not something to put on the post.

1717. What scanner for StarCom21 system in D11

Yahoo group: StarCom21
Date: 2007-08-19 19:23:32 UTC
From: robtsn4
Topic: 1717 Message: 1717

Hello,

I currently live in Edwardsville, IL, and don't hear much (over the airwaves) in the way of public safety lately. I have come to find out that many of the local Police have changed over to the StarCom21 system.

I have two BC785's currently and understand they are not capable of monitoring the new system? Please verify.

Is the BCD996T fully capable for this system?

Thanks!

Brian Robertson.

The 785 will not TRACK any Starcom21 site but can hear the audio of
800 MHz. sites as long as you have the digital card installed.

1721. StarCom21 Updates

Yahoo group: StarCom21
Date: 2007-08-20 01:14:06 UTC
From: n9jig
Topic: 1721 Message: 1721

1) I finally got around to comparing the sites listed in McHenry County's FCC licenses (Special Temporary Authorities actually, known as STA's) WQGZ352 and WQGZ353.

Each site lines up with existing McHenry County Simulcast (Starcom21 Site 120) sites, except for one, which lines up with a site in the Kane County Simulcast set (126C).

I added them to the latest StarCom21 Profile, duplicating 126C as 120G.

At this time we don't know if Site number 120 will remain on the McHenry County Simulcast or if it will get a different number.

2) Has anyone ever actually heard Site 120 on the air? I don't think I ever have.

3) I have updated the StarCom21 Profile with recent reports of confirmations and changes, as well as some frequency updates. I also rebuilt the Master Talkgroup List.

4) I would like to hear if people want to have the Voice Only channels for StarCom21 sites listed. The Profile currently lists only the data channels as all StarCom21 capable scanners support Control Channel Only trunking, so the voice channels are not needed to program your radio.

5) Look for Districts 14 and 7 to changeover to StarCom21 this week and 17 and 5 next week. If all goes well, look for Districts 1, 16 and 21 after Labor Day and then finally the Chicago area (2, Chgo, 15) for Mid September.

6) Sites 108 and 115 (Lake and North Cook) are still down as I write this. It is unknown when they will be back up.

I hope to have the latest CARMA StarCom21 Profile posted this evening.

1722. Traffic / State Fair Stuff

Topic: 1722 Message: 1722

Yesterday at the state fair....

have better identified the Zone 2 Special Detail groups

13063

3307

D

ISP S/E Z2A Disp

Illinois State Police: Special Event - Zone 2A -- Dispatch / State Fair 2007

13064

3308

D

ISP S/E Z2B C2C

Illinois State Police: Special Event - Zone 2B -- Car-to-Car / State Fair 2007

Multiple references to 13064 being "Car-to-Car" .... dispatch is usually on 13063 for Operations

Assuming this may also be the case for the other zones too.

Also, it would be apparent that the Troopers have all 3 zone TG's in their radio for events such as the fair, as the units are from all over the state, not just from Zone 2.

Close call hits on 823.375, 821.425 and 822.475, P25 voice was heard. These are input frequencies. Heard dispatcher on all three as if she was on an FX1. Weird thing is 821.425 & 822.475 are for the Menard (Atterberry) site.... which is in NW Menard County, not even close to Springfield.

Heard District 11 Disp A multiple times

151.28R 151.4 PL repeater in use southern Sangamon, possibly Sangcris Lake in Taylorville
172.275 mobile extenders CSQ output, 127.3 PL on handheld transmit - Conservation

154.985 BM CSQ Macon County Fire (still CSQ)

453.30000

KTK260

Corrections - Concordia Court (@ Springfield)

was repeater, 103.5 PL

155.055 M I-REACH, heard mobile unit calling someone, had a courtesy beep on end of tx, (was not answered)

State Fair Finds

Greetings Brian,
The Edwardsville (SIUE Campus) tower for
Starcom 21 is in fact a 700Mhz Trunk site. So you
will certainly want either bcd-396t, bcd-996t,
or one of those new GRECOM scanners coming out this
October. The 700Mhz EDW site covers a large stretch
of I-55 NB from I-270 and points beyond. Its coverage
to the South is aweful. It can barely be detected at
ISP D11 HQ in Collinsville, Il. Directional antennas
being used ; obviously.

1724. Re: [StarCom21] StarCom21 Updates

Yahoo group: StarCom21
Date: 2007-08-20 02:31:48 UTC
From: David Hudik
Topic: 1721 Message: 1724

I have been told the following about Starcom 21:

The Northern Zone is being "optomized" now thru September. So sites will be up and down depending on what is being optomized. The Starcom Sites in McHenry Co were only up briefly after install and then taken down due to interference with the ISP Chiacgo EDACS system, as well as the Kane Co Simulcast sites. The McHenry Co system is a separate system that is on the Starcom sites and are interconnected for redundancy. So if the McHenry Co system fails, subsriber units automatically switch over to teh Starcom system and visa versa.

Hope this helps

Dave Hudik

n9jig <rich.n9jig@...> wrote:
1) I finally got around to comparing the sites listed in McHenry County's FCC licenses (Special Temporary Authorities actually, known as STA's) WQGZ352 and WQGZ353.

Each site lines up with existing McHenry County Simulcast (Starcom21 Site 120) sites, except for one, which lines up with a site in the Kane County Simulcast set (126C).

I added them to the latest StarCom21 Profile, duplicating 126C as 120G.

At this time we don't know if Site number 120 will remain on the McHenry County Simulcast or if it will get a different number.

2) Has anyone ever actually heard Site 120 on the air? I don't think I ever have.

3) I have updated the StarCom21 Profile with recent reports of confirmations and changes, as well as some frequency updates. I also rebuilt the Master Talkgroup List.

4) I would like to hear if people want to have the Voice Only channels for StarCom21 sites listed. The Profile currently lists only the data channels as all StarCom21 capable scanners support Control Channel Only trunking, so the voice channels are not needed to program your radio.

5) Look for Districts 14 and 7 to changeover to StarCom21 this week and 17 and 5 next week. If all goes well, look for Districts 1, 16 and 21 after Labor Day and then finally the Chicago area (2, Chgo, 15) for Mid September.

6) Sites 108 and 115 (Lake and North Cook) are still down as I write this. It is unknown when they will be back up.

I hope to have the latest CARMA StarCom21 Profile posted this evening.

Ron,

Air Evac does NOT fly out of Springfield. However Air Evac DOES fly out of Pawnee, at least for now.

For those who do not know the Air Evac Headquarters was raided a few months ago by the FBI as part of an investigation.

Knowing that any air irregularities would be handled by the FAA, and that medical issues would be handled by the local EMS system I'll leave it up to the readers devices to read between the lines.

We assume everyone innocent of course, until proven guilty by a court of competent jurisdiction.

Rich,

Two comments:
1.? Thanks for all the good work you and others have done to keep the SC21 data updated.
2.? Regarding your question about whether or not to keep listing the voice only frequencies, here's one man's (possibly mis-informed) opinion: I programmed all the frequencies into my BCD396T with the thought being that since the system was in a dynamic start-up situation, then even if the control channels were juggled between licensed frequencies, I would still be able to hear the system.? In other words, if nothing prevents the system operators from changing control channels, then I thought I wanted to have all the frequencies loaded so as not to miss anything.? I also thought this would save me from having to go in and maintain the data if control channels changed from time to time.

However, maybe all I did was waste memory in the scanner.
?
I guess the?issue is this: if all control channels are known and are for some reason thought to be a stable list, then we'd all save time and memory by maintaining only the control channels and setting the scanner to control channel monitoring.? But how good are those two assumptions: a) that all control channels are known, and b) that they won't change unexpectedly?

Bill E.

Regarding #4. According to the software I have installed on my computer it looks like any system that utilizes P25 you have to have ALL frequencies for each tower. I don't see under trunk system parameters accoding to ARC396Pro software, under BCD996T_uasd software from Uniden if you have P25 tower there is no option for control channels only. With that being said I would think you would almost have to have ALL frequencies listed.

Topic: 1722 Message: 1731

D11 Collinsville

It appears now that Disp A is used by all "11" troopers going 10-41. They are then assigned "B" if they are to use that channel, it appears nothing is said if they are to stay on Disp A. BOLO's are run on both channels. Disp C is definitely used for Ida & Mary units. Have not heard any "SC" (Scale) units on this

Sites.....
WOW.... I thought I could put (and have had it that way for 3 weeks) all the control channels in one "System" on the BCD396.
That is obviously wrong. It will only track the tower with the best signal.
Creating systems for the other sites brings much more traffic into the scanner. The big problem with this is you must upload all the TG info into each site and therefore taking up more memory in the scanner.

Again the coverage areas for these sites is very odd.... as Todd has always said, very directional antennas being used.

Edw 700 mhz seems to be really bad south of Edwardsville.
East St. Louis 700 mhz is REALLY good directly to the east.
East St. Louis 800 mhz appears to be pointing more south east?

Also, since the new tower arrangement in the scanner, while at work in Collinsville I am actually picking up the St. Clair County Simulcast System.
Besides St Clair County units, I am also noticing the ISP TG's showing up on these towers, even though they have their own still in the county. Last night observed D11 Disp A and D13 Disp A both on Site 359.

30331 10:10am Monday morning "Radio Check please respond" "This is Coles, your loud and clear"

Questions...
1) Am I correct on different towers must be in different systems?

x) Does anyone know what a "Jacket Number" is? I've heard this over the years, but had not heard it referred to again until tonight when a trooper was working a 10-50 PI... and mention a "Jacket Number for Missouri"

Those of you with a 396, what do you all have your optimization settings at for starcom? The best I seem to get is what sounds like a distorted cell phone call - completely readable, but wondering if it can get better...I have decode set @ 8 Auto, Res time @ -5, rf gain @ +2. Typically get error rates less then 10.

Back on the topic of D14, SC is being used more and more with car to car. Also been hearing a lot of emergency tests, on ISPERN and Dispatch A. Lot more frequent radio checks on Dsp A as well.

1737. District 14

Yahoo group: StarCom21
Date: 2007-08-22 13:17:23 UTC
From: N2DUP@aol.com
Topic: 1737 Message: 1737

Yes, District 14 Macomb now is full-time on Starcom21. I heard cars all day using it, and low band now seems to be dead.

There were some bad spots cars encountered during the day when the digi-sigs got choppy, but everyone seems to be getting into the system.

I am hearing D14 on the Macomb, Monmouth and Joy (Mercer County) towers so far.

I did not hear District 7 Rock Island on the Joy tower last night, so I am guessing D7 has not gone full-time on Starcom21 yet. D7 and D14 were expected to switch over the same day.

Funny thing is that the D14 dispatchers still say "KSA775" on Starcom. It's kinda like they got used to saying it as an acknowledgement on VHF low band.

The talkgroup information for ISP Zone 1 (9000-series TGs) seems to differ slightly from what has been confirmed via listening and what is listed in the RR and CARMA profiles. Somewhere after TG 9013 but before TG 9044 it seems that we're missing a talkgroup, which has the effect of shifting everything down one number after that (unknown) point. For example, 9044 is listed as IREACH 07, but it appears to be IREACH 05. This has been more concretely confirmed in the "car-to-car" TGs - 9066 is Car to Car 02, 9067 is Car to Car Chicago, and 9068 is Car to Car 05. The challenge will be to determine "where the train jumps the tracks" and get an accurate list of TGs for ISP Zone 1.

One of the oddest license applications I've seen.

Looks like a statewide license for "low power" temporary repeaters for all SC21 sites and input stations.

Application with FCC, currently in "Returned" status

Haven't completely reviewed it yet, but may have two simplex frequencies of 821.3123 and 814.2125.

Attention: STA REQUEST
Dear Sirs:
The state of Illinois is submitting the attached STA application requesting authorization to
operate mobiles, portables, control stations, and on an emergency basis, temporary mobile relays
on the newly implemented statewide trunked radio system known as StarCom21. This
application requests authorization to transmit on the pre-rebanding public safety and NPSPAC
frequencies until such time as rebanding is completed and an authorization can be applied for on
the new frequencies.
It should be pointed out that we are working diligently to complete a Frequency Relocation
Agreement with Nextel and this application will have no negative impact on that process. If you
have any questions regarding this matter, please feel free to contact me at (217) 782-7347.
Respectfully,
Jeff Sexton

Re: Letter of Concurrence
Dear Sir or Madam:
Sprint Nextel Corporation, on behalf of its wholly-owned subsidiary Nextel License Holdings 1, Inc., (collectively “Sprint Nextel”) hereby submits this letter of concurrence with the associated application for a new or modified station, filed by the State of Illinois (“State”).
The State is currently in the middle of the construction of its statewide 800 MHz digital, trunked, voice radio network and requires changes in their 800 MHz NPSPAC frequencies currently allocated in the 866-869.0 band, as well as relocations of some sites and a few new sites to fill in where there would be gaps in their coverage area. The State will utilize this new robust system to fully support the communication of its first responders including police, fire and ambulance services throughout the state, with plans for cutover to the new system by first quarter 2007.
Subsequently, Sprint Nextel and the State are in discussions concerning the reconfiguration of their 800 MHz NPSPAC system currently in the 866-869.0 band. Sprint Nextel fully supports the grant of the associated request to further assist in finalizing the Frequency Reconfiguration Agreement (“Agreement”), which is fully consistent with the Federal Communications Commission (“Commission”) Report and Order, as modified by subsequent errata and orders that have been issued by the Commission.1 Sprint Nextel also understands the 800 MHz Transition Administrator (“TA”) has agreed to these changes, subject to full cooperation by the State to complete the Agreement in a timely manner. Therefore, based on Sprint Nextel’s understanding of the TA’s concurrence, as well as our ongoing discussions with the State pursuant to the reconfiguration Agreement, we hereby concur to the State’s request.

1746. Heard on Jasper County, Dist 10 Broadcast....

Yahoo group: StarCom21
Date: 2007-08-23 21:09:46 UTC
From: Mike
Topic: 1746 Message: 1746

Just heard tones like hit tones/ ISPERN tones on Dist 10 Dispatch, stated that CAD system will be down statewide until further notice in the next few minutes. Requested all officers run 10-27's and 28's through county or cities. They said, it was due to a malfunctioning generator in District Chicago.

So District Chicago controls the CAD system for the whole state? There is no redundancy? OUCH!

Anyone monitoring the EDW site with the PRO96COM
program that can help? I am in Missouri (SW), and too
far away from the EDW Directional antennas.

Knowing that T359 just recently changed one of its
ALTERNATE control channels, I am not surprised that
other sites have some changes too.

Just an FYI, the Starcom system performed with an A+ in Dist. 14, 6 and 7 during the worst storms of the summer today. Galesburg & Warren County area got hit very very hard. Everything stayed loud and clear from the Peoria simulcast tower.

Would this be another reason to actually program in ALL frequencies licensed to a tower, rather than just the current active control channel

(CarmaProfile people?)

Not that it matters with 700 MHz, no actual license!

District 14 is getting a good test of Starcom21 this afternoon. Seems like a major storm has gone through the Kirkwood area in central Warren County and there are many state troopers in the Kirkwood area (west of Monmouth) at this time.

Troopers not on the Kirkwood detail have switched to Dispatch-B, while those in Kirkwood are using Dispatch-A and car-to-car.

Hi David. I'm actually in the process of trying to figure out how to program StarCom into my 396 via ARC196, however, I'm rather familiar with St. Louis City's Motorolla II Trunked system. It is a simple analog trunked syetem, and the info can be found here: http://radioreference.com/modules.php?name=RR&sid=629. Not sure if you know how to program these or not, but all you need to do is make sure your making a Motorola Type II Smartnet trunked system, and enter the primary control channels (the ones listed in red on the RadioReference page). Then, enter the talkgroups you want. Feel free to email me at jkreeg@... if you need any further assistance.

I was out last evening covering the storm. My story and a photo that I used in our newspaper can be found at:

_http://ghns.ghnewsroom.com/regional_news/midwest/illinois/news/x225123209_ (http://ghns.ghnewsroom.com/regional_news/midwest/illinois/news/x225123209)

I drove around the west side of Monmouth and there were a lot of trees and branches down ... parking lots littered with brush and branches ... a lot of standing corn down just south of Monmouth along U.S. 67 ... and lots of debris all around on rooftops and yards. It was even worse in Kirkwood. The town has been sealed off to outsiders.

Thing I noticed here....

all my local sites have to be a separate "system" can't be all bunched together in the same one.

Subject: [StarCom21] Re: Storm damage in Warren County

I was out last evening covering the storm. My story and a photo that I used in our newspaper can be found at:

http://ghns.ghnewsroom.com/regional_news/midwest/illinois/news/x225123209

I drove around the west side of Monmouth and there were a lot of trees and branches down ... parking lots littered with brush and branches ... a lot of standing corn down just south of Monmouth along U.S. 67 ... and lots of debris all around on rooftops and yards. It was even worse in Kirkwood. The town has been sealed off to outsiders.

Subject: [StarCom21] Storm damage in Warren County

District 14 is getting a good test of Starcom21 this afternoon. Seems like a major storm has gone through the Kirkwood area in central Warren County and there are many state troopers in the Kirkwood area (west of Monmouth) at this time.

Troopers not on the Kirkwood detail have switched to Dispatch-B, while those in Kirkwood are using Dispatch-A and car-to-car.

Greetings all,
The whole issue of bunching all of the DATA channel frequencies together or seperating them ; I think comes down to one single decision. If you are wanting to hear talkgroups that are usually only available on one TOWER, then yes. Bunching the DATA channels of that TOWER into the main STARCOM21 system may not be the best choice.

But...

If you do not care about County-Specific talkgroups, and are only interested in District-Wide talkgroups, then bunching the DATA channels is not a problem.

Here is my solution. Figure out which County-Specific talkgroups you want. Program-in the TOWER that those County-Specific talkgroups are usually found on. Put it in its own SYSTEM.

Then, for EVERYTHING ELSE, minus the County-Specific talkgroups and DATA channels ; put those into a SYSTEM where the DATA channels & talkgroups for ALL-OTHER Starcom21 towers are all bundled together.

In the St Louis Metro Area...
This is only an issue with the St Clair Cnty T359.
And with the Madison Cnty talkgroups on the EDW site.

On my BCD-396T, I programmed in the St Clair T359 as a seperate system. And then in my primary Starcom 21 SYSTEM, I L/O the DATA channels for the St Clair T359. This is the way my bcd-396t has been programmed since I originally purchased the radio.

Its a simple solution. Now that the Madison Cnty talkgroups and EDW are operational, I have been pondering the idea of putting the Madison Cnty talkgroups and the EDW site into its own SYSTEM, and deleting it from the main STARCOM 21 system in my bcd-396t. I have not yet done it, because I do not travel to EDW or that area enough for it to become a scanning problem.

But, if I did put the EDW site into its own system and the Madison Cnty talkgroups, then this would make listening to that specific site easier. And keep my

bcd-396t from trying other Towers, where those
talkgroups would not be available.

So there ya go. Simple solution to the problem. I
have been doing it since I purchased my bcd-396t. And
it works. If you do not care about site-specific
talkgroups, then the issue of seperating the DATA
channels to their own SYSTEM is a null-void issue.
It does NOT matter at all, in that case. The
District-Wide talkgroups will be on all TOWERS where
there is at least 1 trunk radio tuned into that
talkgroup.

For those that are in areas where County-Wide
talkgroups are being used, yes, seperate that from the
rest of the STARCOM21 system. But you certainly do
not need to seperate each-and-every TOWER into its own
system. That is a TOTAL-AND-COMPLETE-WASTE of the
memory space of the bcd-396t or bcd-996t. If you did
that, you would have to duplicate the talkgroup list
in every single system (tower site). A total waste of
memory space.

The solution I mentioned is simple, and effective.
Keep most of the STARCOM21 sites and talkgroups
together in one system/file. Then, segergate ONLY the
county-wide systems from the main STARCOM21 system.
Remove the DATA channels and talkgroups
for those few unique TOWERS.

In my bcd-396t, I left the 3 T359 DATA channels
programmed into the main STARCOM21 system/file.
But, I used the L/O feature on those 3 frequencies.

From: todd hartzel
Topic: 1743 Message: 1766

Greetings all,
I found the T358 (700Mhz) tower operating on a
brand new control channel: 775.31875Mhz. I decided
to monitor it again with PRO96COM. Some big changes
have taken place since my last monitoring on this
tower. Here is my RAW T358 file from the PRO96COM
program (Pay special attention to the new FREQUENCIES
and that there are NOW 2 primary CONTROL channels, and
2 ALTERNATE CONTROL channels. Also note there are now
5 voice repeaters. Somebody realized that T358 gets
alot of talkgroup use:

```
Greetings all,
I wanted to pass along some additions to T353 in
East Saint Louis, Il. Though it is still UNPLUGGED
from STARCOM21, here is my latest PRO96COM RAW DUMP:

FileVersion:4
-TowerInfo
#This section is here for information only. With the
exception
#of the Call Sign(s), This data is not Read back into
the program at all.
System ID : 140
System Name : Starcom 21
WACN : bee00
Tower Number (Decimal): 353
Tower Number (Hex) : T0335
Tower Description : D11 - East Saint Louis
Control Capabilities : Voice,Registration
Call Sign(s) : WQBV730
Timestamp : Mon Aug 27 19:42:59 2007

-Tables
#Format: Table ID,Base Freq,Spacing,Input
Offset,Assumed/Confirmed,BandWidth
00,851.00625,0.00625,-45.00000,"Confirmed",0.00625
01,762.00625,0.00625,30.00000,"Confirmed",0.00625

-Frequencies
#Format: Channel,Usage,Frequency,Input Frequency
"01-1924","i",774.03125,804.03125
"01-1964","c",774.28125,804.28125
"01-2004","",774.53125,804.53125
"01-2014","a",774.59375,804.59375
"01-2044","",774.78125,804.78125
"01-2050","a",774.81875,804.81875

Notice, that 2 frequencies have NO designations.
Kinda weird, huh? Also no NEIGHBORS being broadcast
by T353. Its still UNPLUGGED from STARCOM21 for
some reason. But is up and operating as a
single-site. I'm sure someone at ISP or motorola will
take notice of this ROGUE site in the network.

Who knows, there might be other TOWERS in the network
that have a similar status.

Yep, it appears that D17 is live on starcom or at least simulcasting.
I'm picking them up on the Peoria simulcast tower on TG 9019 Disp. A.
However this evening I heard the dispatcher tell a unit that he was
echoing because he was coming across both low band and starcom, so not
sure if its just a simulcast test thing for now.

1776. District 7 on Stacom21

Yahoo group: StarCom21
Date: 2007-08-27 09:30:40 UTC
From: Michael W. Scheel
Topic: 1776 Message: 1776

Finally (!) found a location in the house where I can hear a starcom site in East Moline. No bars, and sometimes I can barely understand the transmission it is so garbled.

Dispatch A seems to be all district operations except when B is used for special details and some units coming on or off duty checks in on B for some reason (most use A). The storm damage detail last week in Galesburg/Knox County and DUI enforcement detail also in the same area saturday night used B.

I have heard D7 ISPERN on 9053. But no car to car talkgroups. But considering I have only one site I can hear. I should expect that I did hear D7 Local in use, but I could not hear the dispatcher direct on HF2 (but if they use the tx site at Sheffield (Bureau Co) I don't always hear that site. Also hear a couple of statewide tgs (one of the mobiles command posts in contact with DuPage EOC on ISEMA)

I should post a photo of where I have to set the scanner to hear the site. It is right in front of a San Francisco PD Taurus photograph. Maybe the lowband whip affects reception?

"T134" is short for "Tower 134" which, in this case, is the tower in Ottawa. For a complete list of towers and frequencies, go to http://radioreference.com/modules.php?name=RR&sid=2324. To fully track

all of the sites you'll need a Uniden 396 or 996. The 800 MHz towers
can also be tracked by the Uniden 296 and 796 as well as the Radio Shack
Pro 96 and 2096 but they won't work on the 700 MHz towers.

Meeting Minutes
June 4, 2007
Members Present: Paul Maplethorpe, Round Lake; Dave Dato, Wauconda; Steve Rauter, WESCOM; John Lozar, Ducomm; Bill Bouma, Mt. Pleasant; Larry Matkaitis,
OSFM; John Lozar, and Gregg Riddle, IFCA.
Guests Present: Alan Choutka, IL EMnet Coordinator; Carl Guse, WI Highway Patrol
Agenda Item:
Call to Order
Approve Minutes
EMNET System
Brainstorming
Discussion/Decision:
Co-Chair Paul Maplethorpe welcomed everyone and called the meeting to order at 1005 hours at Lisle-Woodridge Station 1.
Chief Maplethorpe reported that the minutes from the April meeting were not available at this time. Approval was tabled until June 25th.
Mr. Choutka provided the following status report on the EMnet installations for fire departments in Illinois:
☐ 100 Fire Departments are currently released for installation.
☐ Installation survey responses from fire departments have been slow.
☐ 42 departments have been scheduled or already installed.
☐ 20 departments refused a terminal because they are co-located with their PSAP or EMA terminal.
☐ 30+ departments have not responded to Comlabs survey or telephone calls.
☐ Second batch of 100 fire departments will be released to Comlabs in June.
☐ The initial 283 fire departments should be installed by the end of 2007.
☐ IDPH EMS Region 9 is using HERSA funding to install EMnet terminals in all 12 hospitals within the region for use during bypass and mass casualty situations.
Other EMnet related discussions included:
☐ Adding a bullet point that EMnet is to be used for secured message system for deployed technical rescue teams, etc.
☐ Using EMnet for secured communications for transportation systems between Gary and Milwaukee.
☐ EMnet is beta testing the ENAWAS system.
☐ The need for representation from RED Center was discussed.

Green Fireground
Bases on MABAS
Channels
800 MHz Tactical

Channels
The need for a MABAS Advocacy Statement addressing the EMnet system for the fire service was again discussed. Messer's Rauter and Choutka agreed to prepare a draft for the June 25th meeting.
Mr. Guse questioned the history of the frequency 150.790 MHz being identified as "Green Fireground". Mr. Rauter and Chief Maplethorpe related that this was a frequency identified by Lake & McHenry counties prior to the MABAS Communications Plan being developed. It cannot be used statewide in Illinois or Wisconsin due to repeater input conflicts. Mr. Guse related that Wisconsin has the same issues with the frequency, although MABAS members in southern Wisconsin are using the frequency anyway.
Chief Maplethorpe agreed to contact MABAS-WI president Paul Gilbert to inform him of the restrictions on the use of this frequency. He also agreed to contact Flight-for-Life to inform them of the restrictions outside of Lake & McHenry counties in IL.
Mr. Guse reported that Milwaukee area UASI is looking to invest grant funds in VHF/800 overlays. They desire to install VHF base stations on up to five frequencies and patch them into the Milwaukee area trunking systems. Mr. Guse related that patches were being considered for both IFERN and BLUE Fireground. A discussion ensued and the following points were presented:
☐ Chief Dato suggested that patches be installed between the V_Tac, U-Tac and I-Tac frequencies. Narrowband and programming issues could be a current issue, however.
☐ Chief Maplethorpe raised concerns over the proposed patches on IFERN & BLUE Fireground. The use of high antennas will cause harmful interference well beyond the area of the emergency.
☐ Mr. Rauter suggested the better solution was incident scene patches sing low-power mobile radios.
Mr. Guse asked that the MABAS Comms Committee provide guidance. As a result, the following consensus was reached:
☐ No base radios should ever be allowed on RED or WHITE fireground.
☐ Base radios on BLUE fireground in WI should be discouraged.
☐ IFERN patches should be limited to a rule of thumb of 25 watts of power with antennas not exceeding 25 feet, or otherwise be engineered to only cover a limited area.
☐ An advocacy statement should be developed to address these issues.
Mr. Guse related that he is preparing to license statewide 800 MHz frequencies for simplex tactical communications. He also encouraged the licensing of 700 MHz frequencies for the same purpose.

See prior notes.
No report.
Chief Maplethorpe reported that MABAS President Reardon has authorized the Comms Committee to proceed with the licensing of additional frequencies for statewide operation on the MABAS FCC authorization.
No report.
Chief Dato reported that the SIEC is making progress. The SIEC will be the governance component for interoperability programs.
Chief Dato reported that delays continue and that the State of Illinois has yet to accept the system from Motorola.
Chief Bouma reported that as of June 1st, the Milwaukee County patch between BLUE Fireground and their 800 trunking system has been permanently disabled.
Chief Dato reported that the US Department of Commerce is developing rules for the grant program. IEMA will be the lead agency for this grant program in Illinois.
A brief discussion was held concerning Cook County UASI plans to develop a public safety trunking system for all police and fire departments in the County piggy backed on the Sheriff's trunked system. The new Cook County Sheriff is not agreeable to the proposed plan.

FCC Proposed
Rulemaking – VHF
Paging Ban
Adjournment
Next Meeting
Mr. Matkaitis reported that CMS will award Thermal Imaging Camera bids to both MSA and Bullard. MSA will be awarded the bid for both fire and law enforcement. Bullard will also be awarded a bid for fire service. Cost for the TIC cameras will range from $4700 to $7300 each.
Chief Dato reported on Chicago's new satellite communications vehicle and related equipment. Highlights of the vehicle include:
☐ Tents and Equipment for 100 person dispatch center.
☐ Laptop Computers
☐ VOIP Capability
☐ Cellular COW
☐ High capacity up and down satellite capacity, including video capabilities to send

news feeds to networks.
☐ Ability to remote the Chicago 9-1-1 center to anywhere in the country.
Chief Dato also related that Chicago is willing to make the truck and its services available to suburban communities to assist with a major disaster.
Mr. Lozar discussed a proposed rulemaking by the FCC that would limit, or eliminate, one-way paging on all VHF frequencies, including fire and mutual aid channels. The deadline for comments is July 13th. Proposed language will be developed for the June 25th meeting.
Mr. Rauter moved to adjourn the meeting. Second by Chief Dato. All AYES; the meeting adjourned at 1222 hours.
The next meeting will be held on Monday, June 25, 2007 at Lisle-Woodridge Station 1 beginning at 1000 hours.
Minutes taken by Paul Maplethorpe.

1779. BCT8

I have a BCT8 with 800 MHz TrunkTracker III. Will this work with the new ISP system?

1780. Issues Receiving Transmissions

Yahoo group: StarCom21
Date: 2007-08-30 03:47:58 UTC
From: tweatherford@RadioReference.com
Topic: 1780 Message: 1780

Using my BCD-396T, I've been having some (un)obvious issues receiving transmissions.

Towers will be full signal, decoding the site.
The tx's I get, which are limited, are broken up and garbled, although sometimes it will continue to show the active TG.

In addition to the multiple changes in towers around here, and it's also appearing that Edwardsville may be using alternating control channels now. (Today and Mondays control channel is/was 774.34375, Tuesday was 774.84375. Will see if it alternates again tonight.

Also, while in scan and/or hold mode, I sometimes have this display in the upper right hand corner (same place the low battery light appears) -- what the hell is this? I don't see anything in the manual referring to this. It, which makes sense, almost seems like it is referring to a battery level? Usually shows some where from 3.60 to 4.25 or so???? Currently was on 3.91, unplugged the power supply and now down to 3.88 after a few transmissions.

I've tried the "Adjusting the P25 Threshold" thing, transmission won't even come in clear enough to stabilize the error rate.

Everything was going good for weeks until these control channels changed.

Now suddenly at 10:46 pm D11 Disp A I am hearing Disp with 11-37 and other units nearly clearly, with error rate of 3 down to zero.

Ugh......!!!

Terry

As the last thing mentioned....

Everything has started to come in now suddenly..
(Band has also picked up and now receiving tx from the Godfrey tower)

So then I just thought to turn it off and back on... now the "3.93" is gone and nothing showing, so just must be assuming it is now charging 'correctly?'

I don't know what the issue was.... but UGH, Total UGH for one evening.

Also to receive everything you need to be able to trunk on 700 Mhz, which I don't think the TT3s will do.

Thanks Todd. I bought a BCD996T - now what do I do? Do you recommend a specific software package to enter the frequencies into? Does the Edwardsville tower cover all the local agencies such as Dist. 11, Glen Carbon, Madison Co., etc?

What tower is supposed to cover the Collinsville and further south areas?

Thanks!

From: todd hartzel
Topic: 1717 Message: 1789

Greetings Brian,
I use UASD on both my BCT15 & BCD-396T.
I have no real complaints about UASD, except
that I wish that UASD would have a sub-menu
or MANAGER that would display a complete listing of
all of the unassigned-assigned QUICK-KEYS used
on all of systems for each CONFIG in the radio.

It is a headache to remember what each and every
system's QUICK-KEY is. This is especially true if
you have MULTI-SYSTEMS sharing the same QUICK-KEY.

I think that the ARC396/ARC996 program has a rather
nifty solution to it. On the far left hand of screen
it displays all of the systems in your 396/996 and
shows their: Q1-Q99 next to each system. It will
display each system in their QUICK-KEY numeric order.
When you display TALKGROUP lists and CHANNEL
(conventional) lists, it will display their unique
TALKGROUP/CHANNEL QUICK-KEY order too.

Other than that, I like both ARC396/996 and UASD.
I recommend either, or both. UASD is mostly FREE
with the 396t/996t and some of the other undien
scanners. Some like the BCT15 UASD program requires a
small FEE to unlock all features.

Btw, I posted numerous .USD files to starcom21 and
several of the other yahoo group sites. My
Starcom21.usd file is the South (Area III) talkgroups.
And is actually still incomplete. I did not yet add
D19 to the South file.

Oh, forgot to mention. The ARC396/996 program will
import any and all .USD files. USD is the SYSTEM
files for all Uniden scanners that use the UASD
program.

I have found that .USD files can be univerally
interchanged among all of the various versions of the
UASD program. So it does not matter which uniden
scanner 'UASD' program you are using. It does not
matter if the files was created on a SC230, bcd-396t,
bcd-996t, BCT15, or any other uniden that uses USAD.
The files are all universal. And is fully compatible
with all other Uniden UASD programs.

Personally, I like both UASD & ARC396/996 equally.
They both have their strengths, and weaknesses.

> Carbon, Madison Co., etc?

Nope, not ALL. Most agencies are NOT on Starcom 21 yet. Only a select few. Glen Carbon, Madison Cnty SO (Sheriff's Office), then yes. Most other cities, nope. Its a work-in-progress to convince more Madison Cnty agencies to make the switch. The St Clair Cnty group has been alittle successful at getting more of the St Clair Agencies onboard. Plus, don't forget the St Clair Cnty Group was the FIRST KID ON THE BLOCK as far as P25 Trunk Radio in Illinois ; that I am aware of.

But as time marches on, more will join the system.

> What tower is supposed to cover the Collinsville and
> further south areas?

Well, because I keep hearing the Madison Cnty Sherriff's Office talkgroup on T305 quite abit, I'm guessing that T305 makes up for the lack of EDW coverage in Madison Cnty. The Godfrey site might also have the Madison Cnty Sherriff's talkgroup on their too. My guess is that the EDW site does not provide much coverage into the Alton, Godfrey, Grafton areas. My guess is EDW site probably keeps most of its RF aimed NE and E of the site from SIUE. I can not yet verify its coverage into Godfrey, Alton & Grafton. But that is my guess.
I already know EDW has next to NO coverage into E. St Louis, Cahokia, Fairmount City areas (which was a surprise to me). Along with poor signal at ISP HQ, which is not that far from the SIUE campus. Those in St Louis Metro Area know how close the SIUE campus is to the ISP HQ.

So T305 is probably a good choice for Collinsville. And perhaps T353 if they get it reconnected to the network. T359 has good signals in Collinsville. In all of the areas I frequent there: Belt Line at Hwy 157, Belt Line at Keebler, Belt Line at Hwy 159 and at my Brother's house near the W. Juda & Virginia St area of Collinsville. Of course that is helped by the fact that the 805 E. Ofallon Dr (aka Caseyville) Tower is just a few very short miles from his house.

But T359 does not usually have the Madison Cnty talkgroups on it. Just EDW & T305 only that I am aware of ; again, Godfrey probably has the Madison Cnty groups too. That is, unless the Godfrey tower AIMS its antennas due-north into D18 territory. Anyone on here done a check of the RF contours of the Godfrey tower?

Topic: 1788 Message: 1791

I logged a short conversation between a couple Dist 17 units and ISP dispatch on 9037 this afternoon. I didn't hear a designation for the channel, but given the usage pattern, this group makes more sense as Detail A rather than Detail B.

From: carmachicago@yahoogroups.com [mailto:carmachicago@yahoogroups.com]
On Behalf Of Rich Carlson
Sent: Thursday, August 30, 2007 7:04 PM
To: CARMA List; Scan Illinois; STARCOM21-yahoogroups.com
Subject: (CARMA) Zone 1 (North) Talkgroup Assignments

We seem to have a discrepancy in the Talkgroups some place for the Zone 1
(North) StarCom21 list. We need to be able to pin down where the sequence
drops off.

My guess is that it may be 9029, listed as Detail C for District Chicago, if
this is the case then 9029 would actually be D5 Detail A and each of the
ones following 9029 would be high by 1 number.

We need to have our friends in the Will county area monitor closely and try
to confirm the Detail talkgroups for D5 and see if we can confirm or deny
what we have in the Profile.

Please refer to the Starcom21 Profile at http://www/carmachicago.com and see
if you can help us firm up these TG assignments.

1794. St. Clair Co. 359 sites woes

Yahoo group: StarCom21
Date: 2007-09-02 04:16:56 UTC
From: Patrick Gauen
Topic: 1717 Message: 1794

As I suspected, the BC796D and 296D radios (which of course will not receive 700 MHz) will track Starcom21 just fine when in range of the 800 MHz towers. I'm getting heavy ISP/11 and MadCo SD traffic in downtown StL even off the rubber duck antenna.

Now my question. I cannot get the St. Clair County system to work at all, even though it is all 800 MHz. I'm in range. I programmed in control channels (and voice channels just in case). I've tried control channel tracking on and off, all plans. I've got talk groups in. I obviously know how to get a digital trunked system work, since I've got Starcom going fine. But I cannot make the radio even detect the St Clair County system.

I show control channels of 866.2250, 866.5625, 866.7000 and 867.1625

Any advice?.

You've got the right frequencies. I would like to add that the E. St Louis T359 site is designed to cover into downtown E. St Louis. As far as I know, it was not mean't to cover downtown St Louis in Missouri. Even though E. St Louis & St Louis's downtown are right there almost together on the riverfront.

St Louis City's downtown is very URBAN. The skyscrapers probably are wrecking havoc with your reception. Signals bouncing around, perhaps even cancelling itself OUT altogether in some parts.
I would not be surprised if a more distant T359 site is also being reflected or bounced into your radio causing the 'famous' RF Cancellation effect of simulcasting systems.

I live in South City of St Louis, near Kingshighway & Fyler. And the Cancellation of RF signals from the '''OTHER''' T359 sites is very very heavy here.
T359 is HIT-AND-MISS at my QTH because of this.

RF Cancellation is one of the short-comings of simulcasting systems (receiving multiple TOWERS on the same frequency with equal signal strength). The FM capture effect in our radios is not suffient to work

well when all of the RF carriers are of equal or
almost equal signal strength.

Aha, I remember back in the early days of T359, when
there were just 2 or 3 sites turned 'ON'. Reception
was fantastic over here in Missouri. But when the
other sites got turned 'ON', the reception went bad.
When ALL sites went on, reception has almost
disappeared in most places in Missouri.

I'm sure that the Motorola Trunk Radios used on T359
have much better FM Capture circuits then our radios.

There is a solution: use a beam antenna to target the
desired Site of T359. Or you could try various
low-gain antennas to see if you can drop the signal
level of the OFFENDING Sites from being received and
mixed together inside of your radio. The last thing
to try is use an antenna with some modest RF Gain, but
switch ON the Attenuator of the radio.

1799. RE: [StarCom21] RE: Zone 1 (North) Talkgroup Assignments

Yahoo group: StarCom21
Date: 2007-09-02 15:31:56 UTC
From: Mike Curtis (KC)
Topic: 1788 Message: 1799

Something also to keep in mind -

I've heard no Dist 17 ISPERN broadcasts (listed as 9054), but regularly hear 9055 (listed as Dist 21 ISPERN). The same with Dist 5 ISPERN (listed as 9051), but also regularly hear 9052 (listed as Dist 7 ISPERN). Based on the reception of ground units through the ISPERN patch, I think that 9052 is Dist 5 ISPERN.

Now let's hope they add more frequencies to T134 (Ottawa). There's only 3 active (though the database lists 4) and with all the traffic between Dist 17 and Dist 5 plus the random other groups (from Lee County to Plainfield and like 4 ISP districts), the tower fills up quickly sometimes J

That would make sense, I am hoping to figure out where the list breaks down at, if it is indeed at the 9029 location this would fit in.

Thanks!

On 8/31/07, Mike Curtis (KC) <mike@...> wrote:

I logged a short conversation between a couple Dist 17 units and ISP dispatch on 9037 this afternoon. I didn't hear a designation for the channel, but given the usage pattern, this group makes more sense as Detail A rather than Detail B.

To: CARMA List; Scan Illinois; STARCOM21-yahoogroups.com
Subject: (CARMA) Zone 1 (North) Talkgroup Assignments

We seem to have a discrepancy in the Talkgroups some place for the Zone 1
(North) StarCom21 list. We need to be able to pin down where the sequence
drops off.

My guess is that it may be 9029, listed as Detail C for District Chicago, if
this is the case then 9029 would actually be D5 Detail A and each of the

ones following 9029 would be high by 1 number.

We need to have our friends in the Will county area monitor closely and try
to confirm the Detail talkgroups for D5 and see if we can confirm or deny
what we have in the Profile.

Please refer to the Starcom21 Profile at http://www/carmachicago.com and see
if you can help us firm up these TG assignments.

1804. Re: [StarCom21] StarCom21 MetroEast Traffic

Yahoo group: StarCom21
Date: 2007-09-03 01:43:03 UTC
From: tweatherford@RadioReference.com
Topic: 1801 Message: 1804

Sorry, Loud & Clear.... should have known better than to abbreviate that around here, lol.

Maybe it wasn't the best thing to do, but I bought a Philips 12 dB Amplifier (made for video/antenna) and using in on my antenna feed for my StarCom21/BCD396. (sorry, yes it came from Wal-Mart)

WOW.... what a difference it makes. All the surrounding towers come in stronger and the ones that have a weak unreadable control channel actually becomes readable by the 396t (with Squelch on one).

site with amp without (on S Meter)
353 4 0
325 Full Scale 5
323 4-5 2
305 0 (hear data) 0 (can't hear)
312 0 (hear data) 0 (can't hear)
355 1 0 (can't hear)
359 0/1 (DAT) 0 (DAT)

158.205, slight difference (slightly better)

Will let you know how everything else goes.

Other Notes,
While INSIDE the St. Louis Mills Mall in Hazelwood, MO area (I-370 near I-270), using BCD396 on handheld antenna, picking up D18 DISP-A on Calhoun County Tower 356 (866.325v). Picked up in numerous places throughout the mall.

I've got an idea, but this may be too big of a project. Since apparently the towers in the MetroEast are confirmed to be VERY directional.... how about we start a list/database to eventually create a map of what areas of what counties you can receive a tower in. Then you of course have the difference between handheld and base antennas. How do we start and where do we go?

St. Louis - Hazelwood - Handheld - T356
Sangamon County - Springfield - Handheld - T217, 230 (and probably others)
Montgomery County - Litchfield - Handheld - T304, 307, 312

Madison County - Collinsville - Handheld - T305, T353, T359 (T301,325 fringe)
Madison County - Granite City area - Handheld - T305, 353 (others....?)
Madison County - Glen/Edwardsville - Base - T323, 325, 353, 355
Madison County - Glen/Edwardsville - Handheld - T323, 325, 353
(as you notice, just with these three areas, just miles apart, T305 comes in on handheld in Granite but not Glen Ed on base/handheld. Also, just 7 miles south of Glen Carbon on Handheld T305 comes in fine too)
Directional NOTES (Todd, you can correct me, since your much more in on the St Clair County sites)

***307 Beaver Dam - Central Macoupin County
***312
***325 Edwardsville - Only covers slight areas south of the tower and probably most of NE Madison County ???
***355 Godfrey - Covers down to 270 @ 157, but probably not much further (NW Madison County)

Beyond the obvious coverage area, the point would be to note how far a coverage area is for a particular site.

See next email

Just heard a CW-ID on 155.055, assuming CSQ, but not sure... the only area use is in Missouri, but not a repeater.

--- End of Terry's message

Terry, that is an excellant idea. I was going to say
thank you for posting that reception data on your 396t
at those various locations. I see you got an AMP,
what antenna do you use on it (I assume the AMP is on
the Base Antenna) ?

Your Reception at the Mills Mall further verifies just
how DIRECTIONAL all of the SC21 towers really are.
Let no one have any more doubts about it now.
I know I have said it previously, but just in case
there were still disbelievers out there.

1809. New Talkgroups?

Yahoo group: StarCom21
Date: 2007-09-03 15:52:56 UTC
From: u2concerttrade
Topic: 1809 Message: 1809

Yesderday, on the way to the Cubs game, I picked up a few new talkgroups but I can't find who they are. I know they were working on the tower in South Cook because comm's were coming on and off all day. I also noticed Dist. 15 is no longer being broadcasted on StarCom. Here are the talk group IDs:

3123
3203
3310
1217
4088

I captured them on my 396T by pushing the enter button. There was talking on each of the groups but nothing that I could pick up as to who it was. I noticed there was nothing on Radio Reference about the groups. Please let me know if you have any info on them.

Thanks,
Paul

Subject: [StarCom21] New Talkgroups?

Yesderday, on the way to the Cubs game, I picked up a few new talkgroups but I can't find who they are. I know they were working on the tower in South Cook because comm's were coming on and off all day. I also noticed Dist. 15 is no longer being broadcasted on StarCom. Here are the talk group IDs:

3123
3203
3310
1217
4088

I captured them on my 396T by pushing the enter button. There was talking on each of the groups but nothing that I could pick up as to who it was. I noticed there was nothing on Radio Reference about the groups. Please let me know if you have any info on them.

Thanks,
Paul

Jason,

You might try eham.net or QRZ.com for online practice tests for your license. I would also recommend the ARRL Study Guide. I used both the online practice tests & study guide a little over a year ago to get my license. The test questions aren't really all that difficult. It's a 35 question, multiple choice test. Hope this info. is of some help to you. Once you become a ham, you'll find it very enjoyable and meet alot of nice people.

Good luck on your venture.

1818. SC21 activity in Madison / St. Clair County

Yahoo group: StarCom21
Date: 2007-09-04 18:56:21 UTC
From: Terry Weatherford
Topic: 1818 Message: 1818

Some kind of either practice or real detail occurring in the St. Clair County area.

87-Co Call 1 has been VERY active the last 2-3 hours with activity. A lot of talk of boats and the river and some other stuff.

Latest talk was about "does your portable have the long or short rubber duckie on it" Also, said to switch off of "This channel" (co call 1) because it is going out across all radios in the county, said switch to "SD", ETSB-1 noted that this is NOT "Special Detail 1,2" but "Special Dispatch". He also noted that New Athens units also have that channel. The responder then asked if he knew where the channel was, in A, B, or C ???'

Also noted that this is a channel that has never been used.

As of yet, have not heard activity on any new channel.

As reported before, when units going 401/10-41 in district 11, the dispatcher will assign them the channel to use (A or B).

Today, she was actually saying "Talkgroup A" "Talkgroup B"

Heard 87-CO Call 1, ETSB-1 attempting to contact CENCOM or Fairview Heights PD, CENCOM answered, but ETSB-1 could not hear.

Also, last week it was reported that 1 more city police and more fire department were added to the system in St. Clair County.

4:30pm 13105 Air Ops, 2 units were talking about clearing the Hanger

Well I tried to put the 996T on a setting of 9 for P25 and have got something that mystifies me. I can see the towers incidently Terry the GRE preamp really works well also but the audio does not come through. I have the Radio Shack model with just the channels in it and it works so cannot figure out what hold the audio back. It was working fine before that and had the same problem before and then one day it took off by itself so am really stuck. It is not the squelch. I called Bearcat and talked to them with no help but did a reset holding 2 9 and Hold and turning on to put it back where it was. Any ideas?

1831. SC21 Mobile Extender

Yahoo group: StarCom21
Date: 2007-09-05 20:09:17 UTC
From: tweatherford@RadioReference.com
Topic: 1831 Message: 1831

heard on 17102, what appears to be the southern Radio Tech channel----

(didn't hear the first part of the convo...)
"repeater is not allowed to repeat ISPERN or Car-to-Car, and after the radio gets off of scan, it re-enables the repeater every time."

So I guess they are talking about some kind of issue (whether a beep or ??) every time ISPERN/Car-to-Car is monitored on the mobile radio and the "mobile extender" (called "repeater") is sending tx to the portable.

"The only way to stop this, would be to take ISPERN and car-to-car out of the radio, but that probably wouldn't fly"
The other tech noted "From what I've heard the troopers wouldn't mind because they can still here ISPERN on the VHF radio and have the 1/2 second delay between the Legacy and the 800"

They wanted to talk more, but decided to go to telephone instead of "putting in on the air"

Well I mainly can pick up the Peoria Simulcast tower very strong but the Congerville tower is rather weak and I havn't bothered to find the new Metamora 700 mhz frequency lol. Wasn't much different on it than simulcaste tower when it was up before. Anyways here's what I hear...

Congerville Tower-
ISP D8
McLean Co Shf, very garbled though. Used to come in clear couple months ago but they must of changed the tower directional.

Peoria Simulcast Tower- All districts loud and clear
ISP D6
ISP D7
ISP D8
ISP D9
ISP D14
ISP D17
And any other districts that happen to pop up from time to time with an Officer or tech monitoring in this area. Usually Dist. 15 Tollway has been up sporadicly that last couple weeks.

Jason

I logged a couple "encrypted" hits on 9076 (which should work out to be Dist 5 DCI). Hopefully that's all they were talking about J

Subject: Re: [StarCom21] Activity here on Starcom

One can only hope that the encryption keys that they are talking about are for detective units or internal affairs, not the mainstream comm's.

Although, I am in South St Louis City, and located
where coverage is NOT intended (in the land of
Missouri), it seems that me & Terry get some of the
same towers from SC21. Here is my list of Towers
from S. Kingshighway & Fyler in South St Louis City
listed in numerical order:

- Site #305 - Belleville
ISP D11
Madison Cnty talkgroups too

- Site #333 - Evansville, IL (low signals)
ISP D13

- Site #353 - Caseyville/E St Louis
No talkgroups (disconnected from SC21)

- Site #358 - Waterloo
ISP D11
ISP D13

- Site #359 - St Clair Cnty Simulcast
ISP D11
ISP D13
St Clair Cnty talkgroups

I can get T333 day-or-night on my PRO-96 if I use a
Cellular phone antenna mounted in my Apt window.
Although, signals are still weak. If I place that
Cellular Phone antenna in the right spot, I can also
get T355 from Godfrey. But signals from T355 are
even weaker than T333 at my QTH. This is why I did
NOT include T355 in my list of towers I can monitor.
T333 has a barely good enough signal to qualify always
transmitting on the primary data channel of
866.9375Mhz. I have never found T333 to be on any
other control channel. T333 is way down south in
Randolph Cnty, IL. Chester, IL is 60-80 miles away.
Evansville is around 50 miles away, I guess.

I personally, have no special settings, as I really can not figure out how to get that to work properly. (Error correction, etc.)

Not sure what to say... .everything has been good here except for a few days previously mentioned.

1844. P25 Audio settings

Yahoo group: StarCom21
Date: 2007-09-06 20:33:14 UTC
From: mws72@qconline.com
Topic: 1844 Message: 1844

Today on my 396T I switched from auto to default on the P25 audio setting and it is like night and day in readility. Unless I have a really weak tower the audio is nearly perfect. I wish I had done it sooner. Even the one tower I can get at home is clear.

Clay County Tower- Flora

I hear Dist 12, Dist 19, ITTF talkgroups,such as Health Department
nets

Wayne County Tower- I hear Dist 19, Dist 12, Dist 13

Jasper County Tower- I hear Dist 12, and Dist 9 (at times)

KSB235 is constantly being used here, BUT D11 is still simulcasting many broadcasts on high band.
Still hear KYW825 on some District 18 broadcasts.

Have heard District 18 ONLY do severe weather broadcasts on ISPERN.
Have not had the chance to check Tuesday 10am for Weather Tests.

New Finds
7095 unid voice (St. Clair County)
7319 hit (Madison County Sheriff)

Updates
7071 "Admin" heard unit 160 calling dispatch to say check Fairview Heights RGPS for some info
(may be a FH unit calling CENCOM???)

7220 heard units 121, 126, 128, 131, said: in service, Bond in Lobby, "131 out at District 3? House 7??" Was thinking it may be a St. Clair County jail channel, but 5pm NOW, have heard unit 145. Also, a unit saying Mall Security (St. Clair Square) stopped me about a problem in the Food Court, so now again sounding like a Fairview Heights Police Channel. (I believe there is a substation in the mall for FH PD or St Clair County Sheriff)

I'm thinking now that this is a FH PD Supervisors channel. Have also confirmed that these unit numbers also match up with FH PD numbers. Most traffic is unit to unit, but units do advise dispatcher when out on a call, etc.

Yesterday, heard a St. Clair County unit "87" accidentally set up his Emergency Button and traffic comms were then heard on that TG discussing the situation.

ISP D11 "Dispatch C" as previously said, this is for Investigations only it appears.
--Types heard "6-Ida-xx", "Victor-xx", "Adam Victor-xx" (St Louis Auto Task Force)
"Henry 50" heard on D11 Disp A, saying disposition 43 ???

Have heard MABAS S/W multiple times today. Just heard "Truck the on Westbound 24 from I-57"
---"3400", "UC-13" heard
---1/2 mile from 55 on 47

87-Co Call-1, heard CENCOM calling E St. Louis PD to tell them they were sending MedStar to the scene of a robbery

Just confirmed, still in use in District 11
42.5 136.5 PL Severe Weather Broadcast for (by D11)

I live in Virden and usually get towers 217 and 230 regularly with 217 little better signal. I have received towers 226, 227, 307, 312 occassionally and in the beginning was able to get 324 regularly.

On 217
D09
D18
statewide

On 230
D09
D18
statewide

If there is a trooper on this discussion group, could you please let us know if you can or send me message off discussion group of what are the channels in portables and mobiles? Just curious

I also have the Radio Shack 2096 with the proper software can you
download the CARMA files on it?

Changed to default on P25 and still the same I wonder if there is
something wrong as it had worked great and now changed even though I
improved the antenna with a preamp What you using for an antenna?

From: Chuck
Topic: 1845 Message: 1855

District 14 dispatchers at Macomb say "KSA775" often at the end of exchanges on Dispatch-A. Old habits are hard to break. To them, it's a form of acknowledgement.

1857. MetroEast Traffic - This morning

Yahoo group: StarCom21
Date: 2007-09-07 16:18:09 UTC
From: tweatherford@RadioReference.com
Topic: 1857 Message: 1857

Macoupin County 911
154.7475 D131 being used by 3I57 (Carlinville-Dunn's unit) for getting response times, etc.
--have previously heard traffic, but nothing for a confirmed use
--this repeater system is narrowband, located on the Beaver Dam State Park tower in Palmyra (same location as SC21 tower) and IS NOT used countywide as a dispatch channel (158.205 is)
As far as I know, it does not have any receive sites, but because of its location, gets in and out very well, just most agencies in Macoupin County do not have narrowband radios.

-note, both repeater systems (and remote tx towers on 158.205) have been broadcasting CW-ID for about 2 months now.

ISP Legacy
155.445 now in use by District 18, heard dispatcher conversing with 18-34.
So assuming that low band 42.34 is probably GONE.
FYI... this is a first for D18, having an HF-2 Dispatch channel.
--assuming it has a 67.0 PL transmit tone, but have only heard a couple Tx's and haven't not been able to verify

StarCom21 New Finds
7321 sounded like Madison County Sheriff Dispatcher, something about go to channel 3 with Charles 87, then heard C87 on 7316 (C2C 3) requesting a marked car to help out with a situation near the admin building (County Courthouse?)
-"Charles" units are Captains/Administrators so this is possibly the ADMIN channel.
7222 - possibly a Fairview Heights Fire Channel, heard some brief unit-to-unit voice comms

Updates
7226 confirmed as Fairview Heights Fire Dept - Inspectors.

Have heard multiple TG's and confirmed current descriptions for many St. Clair County TGs.
Band wide open this morning and site 359 coming in full scale at home.

Others Notes
Air 13105 mobile units "111 near Airport - East Alton"
Air 13106 mobile units "111 by Gateway Center"

Demo20 in use by some agency for testing for the weekend.
30335 ITTF16 had a brief key up and later a stuck key (on 355 Godfrey Tower)

Site 353 - East St. Louis - did have D

1858. Help with 796D

Topic: 1858 Message: 1858

Hey all
I have been trying to get my 796D set up for StarCom, but I keep having issues with the control channels constantly flipping as it hits a site. I am using the uniden software that came with it and have the I-Call on and the trunking on as well. For some reason I can't get the channel to stay on one. It comes across as broken as it switches channels. Can someone help.

Tim

1863. Starcom - T101 Control Channel

Yahoo group: StarCom21
Date: 2007-09-08 15:58:18 UTC
From: Larry Schroeder
Topic: 1863 Message: 1863

Noticed that T101 (DuPage Simulcast) has recently been operating w/ a
different control channel.

Per RadioReference/starcom.com the control channels are:
774.03125* 775.03125*
CARMA profiles list the above as well.

While this has been generally true, in the past days recently
774.28125 is presently the control channel for T101.

Updates
7228 is not MEGSI or SD - it is Fairview Heights Fireground, units 100, 111, 113, all talking about on scene at a fire, also can contact dispatcher and asked for "French Village" to move their pumper up the the house. Earlier talked about a perimeter search, which is why it might have previously been thought of as a survellience type channel.
--NOW identified by users as "SP 1" or "SD 1??" Special Detail 1 ?? (a fireground w/ dispatcher)

Woah.. somehow I totally missed an email with updates of Fairview Heights TGs:

7219 Fairview Radio EMERGENCY Button (to FH PSAP)
7220 Police Dispatch
7221 Fire Dispatch
7229 Citywide
7230 Government
7231 Public Works (radios were borrowed to PD for a while)

also has 3 simplex CONVENTIONAL? 700 mhz channels in portable for firegound, called "Scene of Action 1,2,3"
IFERN will be duplexed on a TG and a MABAS Patch (frequency?)

Madison County Sheriff has a "Channel 2", unknown which TG ID it is....
Units 313, 345 said Secure Channel 2 for our traffic stop and dispatcher acknowledged/repeated, never heard them again and I have nothing locked out on those sites, so it may have been an already ID'd encrypted group.

This has been a very exciting week here in the MetroEast with the addition of the amplifier and ability to pick up more towers!!!

In order to speed up the validation process, many ISP units are using portables from their cars. Though not designed for portable use the STARCOM system is proving to work moderately well even in southern Illinois. There appears to be little in the way of "hard" schedules for the installation of the mobile units---generally as they can get them scheduled into the shop.

Please take a few minutes to take a look at the new FCC General Menu Reports 3.1.00 test version, at the location http://selafoss.fcc.gov/General_Menu_Reports/index.cfm.

This new version of the application combines some of the best aspects of the original text/table based application and the current production application http://fjallfoss.fcc.gov/reports7/.

The new Test version adds Site and Frequency Engineering data searches to the previous version 3.0.0 application.

The Actuate reporting services have been removed, and therefore some of the more advanced search and download functionality has been lost. However, user feedback we've received has indicated that these features are rarely used, and simple text based tables are preferable to the complicated "brochure quality" presentations served up by Actuate. Also, Actuate has some incompatibilities with certain internet Web Browsers and hand-held internet devices, which will no longer be a problem moving forward. Printing, as with most web-based text applications, will be dependant on many factors, such as which browser you are using, operating system, printer, etc.

The test application features the following changes / upgrades:

* As with version 3.0.0, there are no detail pages built in to the General Menu Reports application. All records contain links to the appropriate FCC bureau native web page(s).
* A new Site / Frequency search replaces the "State / Service / Radio Service", "State / County", "State / County / Frequency (Range)", “Frequency (Range)”, “Frequency (Range) / State”, “Location” and " Location / Frequency (Range)" queries from the old system. All of these data elements and any combination of them can be used as selectors in the powerful

new query. This allows for a good deal more flexibility than the existing application.
* As with version 3.0.0, data on pending, cancelled, etc. applications is now available in the Site / Frequency queries for all databases for whatever information is publicly available as per individual FCC Bureau policies. In the past only pending data was searchable in only the ULS database.
* In addition to the previous selectors, you can now select licenses based on Grant Date, Expiration Date, or both. You can also add Licensee name to the Frequency/Site searches if you wish.

The data reported by the test application was copied from the live production data on August 22, 2007 and is accurate to that date.

Please email phil.hamm@... with any questions or comments regarding the new Site and Frequency searches.

You are receiving this email because you have registered as a user of the FCC General Menu Reports application. If you do not wish to receive mail regarding this online web application, please email phil.hamm@... to be removed from this list.

1871. District 16

Yahoo group: StarCom21
Date: 2007-09-10 16:38:01 UTC
From: John Marx
Topic: 1871 Message: 1871

District 16 tower at Pecatonica (site 135) is carrying TG 9000 with District 1 troopers and Sterling dispatch. Also Sterling IREACH patch 9054 is on this tower with IREACH heard from D1, D2, Lake County sheriff and some others that are a little garbled. No traffic from District 16 itself heard. This is from monitoring D16 control channel 868.0625, which displays 140h-135, so it must be D1 traffic on a D16 tower.

Will TG 9000 continue on this tower after D16 switches to Starcom or is this temporary for testing? Or is this what a simulcast site does?

1872. SC21 Coverage area - Future "Map"

1873. Motorla MTX8000

Yahoo group: StarCom21
Date: 2007-09-10 21:27:46 UTC
From: Matthew
Topic: 1873 Message: 1873

Hi There, just was wondering if the Motorola MTX8000 will support Starcom 21 or does it have to be a P25 radio or scanner such as the XTS5000 or BCD396T?

Thanks
Matt

talkgroups (at least what is thought to be for those not fully operational added by guessing) are available on www.radioreference.com then click get to the database, then to Illinois and click on statewide.

And just next time before you post something which makes you sound like you haven't paid attention, you might do a little searching on the yahoogroup I know Terry mentions alot that he has updated RR (radioreference.com) He has good information as to what scanners can cover the system and about the system which you could probably use too!

Mike

Okay, I just opened my BCD996T. I have tried to read the manual and understand it. I will give you an example of what I want. I am willing to learn how to set it up, so I don't want any freebie! Let's say I want D17(Lasalle ISP). So how do I actually get it all. I know there is system, groups, sites. I guess I just a little confused.

I would suggest joining the BCD996T yahoo group. Just search for it on the yahoo groups homepage. I know for the 396T, they have a FAQ or some webpage to the likes of "BCD396T for dummies". Basicly a easier to read form of the manual. I'm sure the 996T has one somewhere on the net.

Jason

Illinois distributes 300 radios to colleges (http://www.sj-r.com/News/stories/16284.asp)
The State Journal-Register Fri, 14 Sep 2007 4:50 AM PDT
The state of Illinois says it’s wrapping up the distribution of more than 300 radios to 70 of the state’s colleges and universities. The STARCOM 21 radios are designed to improve communication for campus security officials during emergency situations.

Illinois distributes 300 radios to colleges

THE ASSOCIATED PRESS

Published Friday, September 14, 2007

The state of Illinois says it’s wrapping up the distribution of more than 300 radios to 70 of the state’s colleges and universities.

(http://www.sj-r.com/adnow2/redirect/CSANV2_redirect.asp?D=9/14/2007&File=666&round=533361)
The STARCOM 21 radios are designed to improve communication for campus security officials during emergency situations.
STARCOM is a statewide communications system created in a partnership between the state and Schaumburg-based Motorola.

The state of Illinois has provided schools with both the radios and training in how to use them.

Gov. Rod Blagojevich said tragedies such as the shootings at Virginia Tech earlier this year show how critical communications are during emergencies.

FOR IMMEDIATE RELEASE
September 13, 2007

Governor Blagojevich announces distribution of STARCOM21 radios to colleges for state’s campus security effort

More than 300 radios distributed to nearly 70 colleges will increase emergency communications capabilities between campus security forces and other response organizations

SPRINGFIELD – Officials from Governor Rod R. Blagojevich's administration today announced that the State will complete the distribution of more than 300 radios to 70 Illinois colleges and universities as part of his initiative to strengthen safety for students, faculty, staff and visitors at Illinois institutions of higher education. The STARCOM 21 radios will help campus security officials communicate with other response agencies during emergencies on or near their campuses. Representatives from more than 20 colleges are meeting at the State Emergency Operations Center (SEOC) in Springfield today to pick up their radios and receive training on how to operate them. Forty-six colleges have already received their STARCOM radios and completed hands-on training during a similar session on August 28 at the University of Illinois-Chicago.

"The Virginia Tech tragedy showed us how critical communications are to enhance campus security. These radios will provide campus security with a critical communications link to law enforcement and other first responders whenever an emergency arises," Gov. Blagojevich said. "The Illinois Campus Security Task Force will continue their work to ensure the safety of our college students, faculty and visitors."

On April 29, Gov. Blagojevich announced three college campus security initiatives, including $330,000 in grants from the Illinois Terrorism Task Force (ITTF) that was used to purchase 171 STARCOM21 radios. Schaumburg-based Motorola, Inc., developer of the network, agreed to contribute an additional 132 radios, valued at $294,000. Altogether, the State was able to purchase more than 300 radios for distribution to college campuses. The radios will provide colleges with the capability to access the interoperable communications network used by other responders during emergencies.

"STARCOM21 is a key component of our interoperable communications plan in Illinois, and we are very pleased that so many colleges and universities are receiving these radios, which will dramatically improve their emergency communications capabilities," said Andrew Velasquez III, director of the Illinois Emergency Management Agency, who made the announcement on behalf of the Governor at the SEOC headquarters in Springfield.

"This STARCOM21 distribution to college campuses not only will provide secure interoperable communications on campuses, but because we already had distributed these radios to more than 1,800 public safety agencies, it will also link them with their local law enforcement, fire, emergency management and public health responders," said Col. Jill Morgenthaler, deputy chief of staff for public safety.

STARCOM21 is a statewide communications system deployed in a public-private partnership between the State of Illinois and Motorola. This network allows emergency management, law enforcement, fire and public health agencies to talk to each other from nearly anywhere within the state. STARCOM21 is one of several statewide interoperable networks developed by Motorola for first responders in the United States.

The ITTF made STARCOM21 radios available to every public safety agency throughout the state, including law enforcement, fire, emergency management and public health departments. A total of $10.7 million has been dedicated to the procurement of STARCOM21 radios for state and local public safety agencies in Illinois.

The Illinois Campus Law Enforcement Administrators worked with the ITTF on allocation of the radios.

In addition to the STARCOM radios, the Governor's other college security initiatives include:

- Creation of an Illinois Campus Security Task Force with members representing community colleges, public and private colleges and universities, proprietary institutions, the ITTF, the Illinois Emergency Management Agency (IEMA), the Illinois State Police (ISP), the Illinois Law Enforcement Alarm System (ILEAS), and the Illinois Campus Law Enforcement Administrators. The Governor directed the task force to identify training needs and implement programs that will help campus security officials prepare for, respond to and recover from security incidents on their campuses.

- Appointing the Illinois Board of Higher Education (IBHE), the Illinois Community College Board (ICCB) and the Illinois Campus Law Enforcement Administrators to the ITTF. The participation of these groups in the ITTF will also allow other public safety bodies to gain additional insight into the security issues and incidence response requirements unique to college campuses. The ITTF currently has more than 70 member organizations representing state and local agencies, public safety organizations, municipalities with populations over 100,000 and the business community

CTA accepts Governor Blagojevich's offer to avert doomsday scenario

The Chicago Transit Authority today accepted Governor Blagojevich's offer of immediate relief to avert service cuts and fare hikes. The State will accelerate this year's RTA Fare Subsidy to provide an immediate $37 million to the RTA this month – that's an additional $24 million in immediate funding for the CTA. This will allow the Authority to continue to meet the needs of commuters while the General Assembly finalizes and passes a longer-term funding plan.

The RTA Board must now act on the proposal.

From: n9jig
Topic: 813 Message: 1886

I have uploaded the latest version of the CARMA StarCom21 Profile to http://www.carmachicago.com/profiles. This has the known Voice channels added. We decided to add the voice channels since some sites have been changing control channels recently to freqs that had been voice only up to now.

I think I solved our North Zone 1 TG error. It appears that District Chicago has 7 Dispatch groups, not the 8 we had listed. Please check your Zone 1 districts to see if the numbers listed line up with what you have.

I also went thru several sets of Pro96Com files to update control and voice channels. This is probably the most accurate way to retrieve system frequencies around. If you have a Pro96 or a Pro2096 then you should try this free program. Go to http://groups.yahoo.com/group/PRO96COM/ and join up to get the latest versions.

Please take a few minutes and check the file for accuracy and send any corrections to the address listed.

1887. SIUE gets 6 radios to deal with crises

SIUE gets 6 radios to deal with crises

(http://media.belleville.com/smedia/2007/09/14/16/106-091407snSIUEradios.standalone.prod_affiliate.98.jpg)

Steve Nagy/BND

SIUE police captain Tony Bennett witht the department's six new Starcom radios given to SIUE by the state.

- What is Starcom 21? (http://www.bnd.com/ntm/story/128936.html)

Campus emergencies are growing problem

BY MARIA BARAN

News-Democrat

EDWARDSVILLE --
Southern Illinois University Edwardsville received six new police radios Thursday, following the state's announcement that 300 of the radios, intended to improve communication for campus security, were distributed to 70 colleges and universities statewide.
The radios, part of the Starcom 21 800 MHz radio system, allow for all public safety services to communicate and respond to emergency situations more effectively.

"This radio system was developed by Motorola," SIUE Police Capt. Tony Bennett said. "It's an endeavor with the state of Illinois to create a statewide radio system."

The radios, which are valued at more than $2,000 apiece, were funded from $330,000 worth of Illinois Terrorism Task Force grants and a donation of $294,000 worth of the radios from the system's developer, Schaumburg-based Motorola Inc.

"The Virginia Tech tragedy showed us how critical communications are to enhance campus security," Gov. Rod Blagojevich stated in a news release. "These radios will provide campus security with a critical communications link to law enforcement and other first responders whenever an emergency arises."

In July, SIUE had a scare when a student was arrested in connection with what police said was a threatening note found in an inoperable car. Olutosin O. Oduwole, 22, is awaiting trial on the felony charge of attempting to threaten a university, which carries a maximum sentence of 15 years in prison.

The threat of campus emergencies has Bennett voicing favor for the new technology: "Anything we can do to keep our population as safe as we possibly can."

The Starcom networks allow emergency management, law enforcement, fire and public health agencies to talk to each other from nearly anywhere within the state. The Illinois system is one of several statewide interoperable networks developed by Motorola for first responders in the United States.

The six new radios will remain at the university's police headquarters and be used in the event of a campus emergency, while officers continue to be equipped with their current radio system, Bennett said.

"We're fortunate that we have a system now that allows us to communicate with Edwardsville and Glen Carbon," Bennett said.

The police force currently uses more than 45 handheld and vehicle UHF radios, which require coverage in certain locations to ensure they work properly. The six new radios are individual units that require no equipment to be strategically placed and has a better back up power supply in the event of an emergency, Bennett said.

Blagojevich's other college and university security initiatives include appointing higher education officials to the state terrorism task force and creating the Illinois Campus Security Task Force, charged with identifying needs and implementing programs to aid campus security officers.

system."

The radios, whichare valued at more than $2,000
apiece, were funded from $330,000 worthof Illinois
Terrorism Task Force grants and a donation of

$294,000worth of the radios from the system's developer, Schaumburg-basedMotorola Inc.

"The Virginia Tech tragedy showed us how criticalcommunications are to enhance campus security," Gov. Rod Blagojevichstated in a news release. "These radios will provide campus securitywith a critical communications link to law enforcement and other firstresponders whenever an emergency arises."

In July, SIUE had ascare when a student was arrested in connection with what police saidwas a threatening note found in an inoperable car. Olutosin O. Oduwole,22, is awaiting trial on the felony charge of attempting to threaten auniversity, which carries a maximum sentence of 15 years in prison.

Thethreat of campus emergencies has Bennett voicing favor for the newtechnology: "Anything we can do to keep our population as safe as wepossibly can."

The Starcom networks allow emergency management,law enforcement, fire and public health agencies to talk to each otherfrom nearly anywhere within the state. The Illinois system is one ofseveral statewide interoperable networks developed by Motorola forfirst responders in the United States.

The six new radios willremain at the university's police headquarters and be used in the eventof a campus emergency, while officers continue to be equipped withtheir current radio system, Bennett said.

"We're fortunate that we have a system now that allows us tocommunicate with Edwardsville and Glen Carbon," Bennett said.

Thepolice force currently uses more than 45 handheld and vehicle UHFradios, which require coverage in certain locations to ensure they workproperly. The six new radios are individual units that require noequipment to be strategically placed and has a better back up powersupply in the event of an emergency, Bennett said.

Blagojevich'sother college and university security initiatives include appointinghigher education officials to the state terrorism task force andcreating the Illinois Campus Security Task Force, charged withidentifying needs and implementing programs to aid campus securityofficers.

They will be changing over on Tuesday South Cook in the morning (9 AM ?) then the South EDACS system will be turned off so that those freqs will be allocated to Starcom right away. North units will change in the afternoon (13:00 ?) and they will be reallocated. Also D2 & D15 are supposed to change also so they may be reallocating the D15 freqs at that time also. So sounds like we will have to run pro96com for all the changes that WILL happen at that time.

1899. New? Starcom 21 TGs logged

Yahoo group: StarCom21
Date: 2007-09-17 22:51:16 UTC
From: Kevin
Topic: 1899 Message: 1899

Just heard (unknown agency) units "302" and "104" with radio checks on the following TGs:

1005 - IDd as "TAC 1"
1006 - IDd as "TAC 2"

I believe that these might be Plainfield PD TGs, as they have already been confirmed as using TGs 1001 (dispatch by Wescom), 1002 ("Ch. 2") and 1003 (TG name unknown). I suppose that they might use TG 1004 as well, but I have no notes of activity there.

Kevin

I have recordings of it, there was a report at 1430 of a medical aircraft calling mayday it was going down in a field S. of Effingham,IL. No helicopter was found and according to radio traffic the Air Force had beacon hits SW of Vandalia as well as S. of Effingham, the search has been called off, no medical helicopters have been found to be missing from any companies in the area.

1907. Re: Chicago area SC21 observations

Yahoo group: StarCom21
Date: 2007-09-18 19:42:49 UTC
From: Kevin
Topic: 1907 Message: 1907

I've updated my observations below - TG 9006 appears to be North sector patrol. As "Radio99" mentioned earlier, 866.9375 is in use on Site 115 (North Cook Simulcast) as the control channel (new). Also seeing use of 866.4375 as a voice channel there (also new). With the death of the EDACS systems, I'd imagine that Site 115 might see use of more former EDACS 800 Mhz freqs. Have yet to find any sector (Nora/Mary/Sam) car-to-car TGs in use on SC21 - but it's early.

1908. Chicago area SC21 observations

Yahoo group: StarCom21
Date: 2007-09-18 19:01:23 UTC
From: Kevin
Topic: 1907 Message: 1908

Here are a few brief observations that I've made so far for "new"
Chicago-area SC21 TGs:

Tollway -

9098 - ISP D15 Patrol ops.
9099 - ISP D15 Patrol ops.
2006 - ISTHA Main't. ops.
2003 - encryption
9142 - ISTHA radio techs, mention of going "full encryption" on 9/25

A quick check of the ISTHA 800 Mhz conventional channels finds no analog
voice traffic, but rather what sounds like possible SC21 digital traffic.

ISP District Chicago -

9005 - "Dist Chgo A" - no traffic noted yet
9006 - "Dist Chgo B" - light traffic, use unknown
9007 - "Dist Chgo C" - appears to be Middle sector patrol TG
9008 - "Dist Chgo D" - appears to be South sector patrol TG
9009 - "Dist Chgo E" - appears to be "State North" TG
9010 - "Dist Chgo F" - appears to be "State South" TG
9067 - "Car to Car Chicago" - carrying D-Chicago c/c traffic

ISP District 2 -

9002 - Dist 2 A
9003 - Dist 2 B
9066 - Car to Car 02

Also heard encryption on TGs 4101 and 4104 - my '396 indicated that I
was listening to a SC21 system site, possible Michigan TGs???

More later I'm sure...

The new freq that was not on CARMA brought Mt. Olive up. So that is
now working Just noticed that the Nilwood site now working with the
new freq Nothing from Fayetteville and not really sure where it is.
An working on a deal for some old 800 base antennas that would be
good to mount outside.

Thanks

1927. FW: One Other Note of Interoperability

Yahoo group: StarCom21
Date: 2007-09-20 04:27:43 UTC
From: Terry Weatherford, WX9SAR
Topic: 1927 Message: 1927

12/06 -- Old, from the 911 director of st. clair county IL

In our region the City of St. Louis PD has picked Motorola to supply the regional radio switch. St. Clair and Metro (light rail and bus operation) are part of the regional group spear heading the project. As a result of this decision the possibility of increasing interoperability between the Illinois side of the river and the entire St. Louis region maybe even further has become a reality.

Question
Has anyone heard a "point-to-point" or HF-4 type conv from district to district since the Sc21 changeover.

155.46 was often used btwn D18,11,9 for quick comms where they didn't want to use computer, teleytpe or telephone...

Just heard a 18 unit ask dispatch to contact D11 and just thought about this...

I have updated the StarCom21 RadioReference.com "Info" window with the site coverage I have been working on....

it can also be accessed here: http://www.scanil.com/STARCOM21-info.htm

Also, need to update ALL districts, when did they switchover?

The following are ISP districts which are assigned to North, Central, South Zones:

North (Zone 1 - Sites 100-199)

Central (Zone 2 - 200-299)

South (Zone 3 - 300-399)

ISP District 01 - Sterling
---Online 9/07 using XTS5000 portables only
ISP District 02 - Elgin
---4/07 NO radios in cars; have heard testing
ISP District 03/04 - Chicago
--Reported to go online in August (or June?)
ISP District 05 - Joliet
---In use
ISP District 07 - East Moline
--Reported to go online 5/22/07
---Have heard some testing
ISP District 15 - Tollway
---Lots of Testing & Simulcasts/Patches
ISP District 16 - Rockford
ISP District 17 - LaSalle
ISP District 21 - Ashkum
---Have heard testing

ISP District 06 - Pontiac
ISP District 08 - Peoria
--ONLINE
ISP District 09 - Springfield
---ONLINE ??? heard testing
ISP District 10 - Pesotum

--Reported to go online in May
ISP District 14 - Macomb
--Reported to go online June 07
ISP District 20 - Pittsfield
---Only heard ISPERN Testing

ISP District 11 - Collinsville
--ONLINE 7/24/07
Disp A, B, C, Car-to-Car, Detail A,B
ISP District 12 - Effingham
---Car-to-Car heard in use
ISP District 13 - DuQuoin
---ONLINE 7/07
ISP District 18 - Litchfield
---ONLINE 7/31/07 Disp A, Car-to-Car
ISP District 19 - Carmi
ISP District 22 - Ullin
---ONLINE 7/07; Disp B in use

Thanks!

Date: 2007-09-21 02:03:25 UTC
From: Rich Carlson
Topic: 1936 Message: 1936

Confirmed the following today:

9005 is District Chicago A "Priority"
9006 is District Chicago B "North"
9007 is District Chicago C "Middle"
9008 is District Chicago D "South"

1937. Re: (CARMA) Starcom 21 Observations

Yahoo group: StarCom21
Date: 2007-09-20 22:02:54 UTC
From: Kevin
Topic: 1931 Message: 1937

9011 being the "Chicago" channel falls into my observations from the switch over on Tuesday. The "Paul Sam" units you heard are ISP's Protective Services Unit (formerly the CMS Police). I believe that 9009 and 9010 might be what were formerly known as the "State North" and "State South" channels on the EDACS system, but I'm wondering if there is still a need for these channels to be geographically separated now that SC21 is one big happy system (unlike with the EDACS north and south systems).

TG 13016 is still a mystery to me - I'm not convinced that it is an ISP Aviation TG (as listed in the SC21 profile), even though it is one number above the confirmed ISP "Air Ops" TG (13105). A few months ago (on different occasions) I heard southern IL troopers who thought they were calling their dispatchers on a district TG but whose radios were erroneously on this TG. I only heard the initial transmission here, never any second attempts or replies.

1938. Knox County testing

Yahoo group: StarCom21
Date: 2007-09-21 03:52:46 UTC
From: N2DUP@aol.com
Topic: 1938 Message: 1938

The Knox County Sheriff's Department was heard testing on Starcom21 this afternoon using the typical Talkgroup 20 for demo purposes. KN-4 and another unit were heard conversing with "Knox County" testing from various areas for radio signal reports.

From: Rich Carlson
Topic: 1941 Message: 1947

The bold (Control) channels are listed as known. Some sites have 4
known control channels. Since these control channels do not change
regularly like older systems a single channel might be the control
channel for months without changing.

Unless someone runs Pro96Com or Unitrunker on each site we won't know
about the other control channels until they become active. These
applications will indicate the current and alternate control channels.

It is also possible that sites may only have 3 or less designated
control channels, 4 is just the maximum.

Topic: 1949 Message: 1951

Still having some issues this morning. At one point "Finding Control Channel" was scrolling across the screen. I'm in a strong signal area for the South Cook Site so I know it's not an antenna issue. I'm beginning to wonder if the cutting out issue mentioned before wasn't the system briefly dropping the control channel ?

1962. ISP D-Chicago System

Yahoo group: StarCom21
Date: 2007-09-26 22:52:29 UTC
From: Bob Rehse
Topic: 1962 Message: 1962

I had a chuckle last night while working a wreck out on the Eisenhower that I had to share. One of the troopers was standing inside my ambulance while another one was talking on his portable outside the rig. She had the door open and could hear him talk and hear her radio at the same time. I'm tellin' ya', you could almost see her shudder.

I asked how she liked the new digital system and she told me that (in nice terms) it sucked. The delays and the audio modulation are driving them nuts from what she was saying.

Of course, it's only one opinion. Repeated many times, but still, only one opinion.

BTW, I've been trying to monitor the Cook North System and am hearing nothing. Which system would be better to monitor, if anyone is close, North or South.

1964. Re: ISP D-Chicago System

Yahoo group: StarCom21
Date: 2007-09-27 02:11:40 UTC
From: Mike
Topic: 1962 Message: 1964

Its not a site specific problem, I think the issue is that the system is Digital, and just as a digital cellphone provider needs towers every 10 miles or less for optimal coverage, so does STARCOM, and Motorola didn't plan this, I have a local tower within 5 miles or less, and still have broken audio. I don't think it is the 996, I agree it is tower issues, sometimes I get clear audio, then sometimes it has the tunnel sound, like the signal is fading. I would have thought they would have played with the system more than they did to get the wrinkles out before they switched over.

I think the state will get together with Moto, and see what will change and how to fix it. Of course that means either higher power towers or more, which either way means the FCC has to be involved.

Anyone heard if IDOT will be making the move to Starcom or staying on 40 mhz freqs?

Mike

1965. Starcom Audio

Yahoo group: StarCom21
Date: 2007-09-27 02:17:51 UTC
From: Rich Carlson
Topic: 1965 Message: 1965

The Starcom21 system itself has some issues with dropping audio that may or may not be related to signal strength. Obviously this affects actual users as well as scannists. I suspect however that it may be related to the simulcast nature used in the Chicago area. I notice that the signal strength meter on my radios fluctuate wildly and the drops are much more pronounced then. Sometimes the signal strength stays string and the system sounds great.

This weekend I will make a point of monitoring some non-simulcast sites as I attend the CFMC hamfest in Belvidere, with some railfanning side trips to Rochelle etc. I want to see if the system sounds better on single tower sites than simulcast ones.

I seem to recall there being a similar issue when the MPCSS system first installed simulcast sites in the Detroit area that was fixed with both system upgrades by Motorola and firmware updates by Uniden. I wonder if we are headed down this path as well.

Just wasn't sure you wanted your name on it, all over this yahoogroup with along with your telephone number and email address.

That's all....

Figured if you'd want to personally post it to the group, you would have done it.

Norm Forshee wrote:

Allan:

I guess I am an inside source for publicly disclosed information which had my name on it. I don’t know why he tries to make it sound so mysterious. I guess I should let everyone know there was no inside source and that the information was put on the INENA list server by me so that people would read it.

From an inside source at St. Clair County....

I am providing you all with an update on our radio system. We have added the following agencies to the system in the last few weeks:

Brooklyn Fire Lebanon Fire

Brooklyn PD Lebanon PD

Camp Jackson Fire Lenzburg FD

Church Road Fire Marissa FD

East Carondelet PD Midway FD

Fairmont City Fire New Athens FD

Fairmont City PD Prairie DuPont FD

Fayetteville FD St. Libory FD

French Village FD Villa Hills FD

Golden Garden FD

Our eighth channel will be on line effective the middle of October.

1967. St. Clair Co. testing (and testing) on the SC21 ILEAS TG

Yahoo group: StarCom21
Date: 2007-09-27 16:43:34 UTC
From: Kevin
Topic: 1967 Message: 1967

Has anyone else heard St. Clair County asking for "radio checks" on the SC21 ILEAS TG at least once a day over the past couple of days? He had multiple replies each day. Yesterday, Waukegan replied that St. Clair's signals were "STILL" loud and clear (leading me to believe that they've been making a regular practice of this). Today, St. Clair Co. made a point of telling one of the replying northern IL units that he was 15 miles SW of the St. Louis Arch. Isn't "statewide coverage" one of the main features of this system? I can just hear the St. Clair dispatcher telling his co-workers "Boy, this radio really gets out - watch this!"

Kinda like a kid with a new toy........

NEW

7100 unid - St. Clair County - possible new local PD TG
7147 unid - St. Clair County
7305 unid - Madison County, 1 hit (possibly Sheriff)

Updates
7046 lots of traffic on road construction detail
7056 87-SD Info, lots of use, still can't really tell its purpose, unless like a local ISPERN ?
7081 87-Events2, verified in use
7230 heard units 402 & 403 talking about BBQ Grill Cooker (87-FH Gvrnmnt)

Info/Hits
Been hearing TG 9005 (Chicago) a few times the last few days

9005, 9007, 9010, 9013, 9021
9083
13002 D8 dispatch, in use
13007 in use
13009 D14 dispatch heard in use
13011 D20 dispatch, 18V1?
13063 ISP S/E Z2A Disp, lots of use on 9/25/07, calling the dispatcher "Springfield"
17003 in use
17006 in use
17011 in use
17019 D12 Detail A - one hit
17042 D20 ISPERN patch, 1 hit
17068 ISP SpEv Z3A in use 9/26/07, with a dispatcher (in use 9/25-9/27)
30329 in use by St. Clair County (heard "waukegan")
30335 ITTF R16 "radio check"

154.785 D351 Macoupin County Sheriff, now has CW-ID (have not heard yet on 159.09)

1970. Site 115 Control Channel

Yahoo group: StarCom21
Date: 2007-09-29 02:14:37 UTC
From: Rich Carlson
Topic: 1970 Message: 1970

Site 115 (North Cook Simulcast) changed control channels at about 8:00 PM tonight from 854.9875 to 866.9375.

Interestingly, as the system control channel was changing it seemed to waver up and down on 854.9875 for a couple minutes before disappearing altogether.

1973. Metro East Traffic Updates (last couple days)

Yahoo group: StarCom21
Date: 2007-09-30 01:44:13 UTC
From: tweatherford@RadioReference.com
Topic: 1973 Message: 1973

NEW
7105 1 hit, no voice (St Clair County)
7145 1 hit, no voice (St Clair County)
7168 1 hit, voice saying "go ahead" -- possible law enforcement (St. Clair County)
7302 1 hit, said "xxx vehicle radio" (formerly used as 99-PPD-OPS2 Plainfield Police Operations 2)

Updates

7014 is ID'd as "Fire Common" on air (heard 1500 units, Camp Jackson FPD)
7020 IS NOT 87-MERCI 3 simulcast or patch
---heard today, paging on both TG & 155.28 CSQ for Mascoutah EMS, then heard dispatch traffic only on SC TG
7107 87-Fairmont City, citywide ???
7147 additional 4 hits, voice, possibly public works "plan on doing the contract"
7228 FH PD Spec Detail 1 - LOTS of use the last few days, with dispatcher and units, 10-28s, etc.
7229 87-FH Citywide --- heard in use by units 401,402 possibly Parks
7230 87-FH Gvrnmnt --- possibly same Parks units
7231 87-FH PW --- unit 403

7319 69-??? 1 additional hit, no voice

13063 appears to be in use in Springfield area, again, with "Srpingfield" dispatcher, w/ multiple different district unit numbers

17043 D11 Local Patch, 3 hits, 1 said "EPV, 11-84 Car-to-car" (would be IDOT vehicle)

17068 again multiple tx in last few days, district 11 ("Collinsville") as dispatcher, multiple traffic stops with ISP units C-233, 11-11, 14-24, 1-5, 2-71, 6-36, 12-60, 2-38, 2-42, 7-19, 15-121 and an X-unit. "Duty 2nd Division M(Mary)50" (possibly units with a motorcycle radar unit?

30335 ITTF Region 16 (Metro East) (*, possible partial encryption)

7021 87-Law Rural 3, used by:
2544, 2549, 2556 PD @ 2300 Antiquity (apartments)
660, 664, 668 (CFM-Convenience Food Mart 5th & Washington????) ("Patient being transported to Gateway Reg Med Ctr-Granite City")
David 1 from 64 (664?)
411 (6411?) 743 True Value Drive (BP Station)
Charles 1, Charles 2 - Brooklyn PD
5406 ??

TG17014 D22 Dispatch B, Ullin, still in use but have yet to hear Dispatch A in use???

30332 ITTF Inc-1 heard "Chicago OEMC" the other day

Info/Hits

867.0125R 156.7 PL in use for ??? "Team Leader 1", "Casualty Count" "2 suspects DOA", "do you have a test kit to determine what the substance is";" tested for Cocaine, if you can relay that to hazmat"

From: Jesse Risley
Topic: 1974 Message: 1975

While storm chasing this evening in W. Central IL and NE Missouri, I did hear District 20 put several warnings out over 42.500 MHz, in addition to simulcasting on the local STARCOM patch. They were also using 155.370 MHz to communicate with Adams County and Marion County, MO in reference to the tornado damage near Palmyra.

1977. CARMA Friday Nighter

Yahoo group: StarCom21
Date: 2007-10-03 10:40:29 UTC
From: n9jig
Topic: 1977 Message: 1977

The next CARMA Friday Nighter will be at the O'Hare Oasis above the Tri-State Tollway near Irving Park Road on Friday, October 5th, 7:00 PM.

It is likely that a lot of the discussion will center on StarCom21, and we will have a couple
radios listening to the system there. We may also discuss the reconstruction project at ORD.

We may well have some handouts available.

1978. Latest StarCom21 Profile posted

Yahoo group: StarCom21
Date: 2007-10-04 02:02:40 UTC
From: n9jig
Topic: 1978 Message: 1978

I have posted v6.2.2 of the StarCom21 Profile at http://www.carmachicago.com/profiles for your viewing pleasure.

Various talkgroups have been updated, several sites have had frequency updates and a few other corrections have been made.

I added a new section, a Decimal to Hex conversion chart, for our various PRO96 and PRO2096 users so that they can figure out the displayed Tower numbers easier.

We still need confirmation help for a few things:

Tower Locations:
There have been some changes and discrepancies about some of the tower locations. If you can help us by checking the towers in your area and see if they match with what we have. We think there are some differences with some of the simulcast sites in the Chicago area and the MetroEast areas specifically.

Talkgroups:
While active talkgroups are pretty easy to figure out, less active ones are difficult. If you
can, try to lock out all the "regular" talkgroups as you verify them and listen in for the more obscure ones.

Frequencies:
We have added voice freqs to the Profile. If you run Pro96Com or Unitrunker please try to note freqs logged. We are interested in knowing those listed as Control or Alternate Control channels versus just Voice channels.

As always, please let us know of any corrections!

1979. Tracking Question

Yahoo group: StarCom21
Date: 2007-10-04 02:23:15 UTC
From: Matt
Topic: 1979 Message: 1979

Hi, I am new to the group. I have a quick question. Can a Uniden BC898T and a Uniden BC245XLT able to track the StarCom21 System? If so, Can someone provide a basic tutorial on how to enter it into the scanner. Is it entered like a normal trunked system? Thank you for any help.

Matt

1980. Re: [StarCom21] Tracking Question

Topic: 1979 Message: 1980

Neither scanner is capable of tracking the StarCom21 system.

You need a digital capable scanner.

Check the archives, there have been dozens of discussions on the pro's
and cons of each of the scanners capable of the system.

Enjoy!

1982. Metro East Update (the past few days)

Yahoo group: StarCom21
Date: 2007-10-05 02:59:21 UTC
From: tweatherford@RadioReference.com
Topic: 1982 Message: 1982

Updates
7105 much more traffic today (10/2/07) --running plates ????
7137 unid Law - also heard encryption on here (Mascoutah Police: Car-to-Car ??? heard unit 5808)

Comments
ISP D9 Disp A & B -- could not tell any difference between the uses on the channels.
ISP D09 ISPERN*P was "Stuck" on 868.375, tower - springfield, but was not coming up on the other Springfield tower at all. Locked it out, but later heard a regular ISPERN broadcast on the other tower.

155.46 was used by District 18 to broadcast severe weather alert, along with SC21 disp.
D9 used Disp A to broadcast Tornado Warning in Cass County.

ISP D11 Local*P was, at 5:40pm 10/2/07, severe weather warning from D Pittsfield
ISP D11 Local*P was, at 5:46pm hard to understand, possible wx, District 10

42.5, Severe Wx Broadcast from District 18

3J24 (SOS) dispatch on D18 Disp1

heard 6-4 (black male) on TG9100 sounded like he said "on towaway channel" but assuming he must have said Tollway

1983. PRO 96 supposed to hear statewide?

Yahoo group: StarCom21

Topic: 1983 Message: 1984

You will only hear traffic on any talkgroup if a System radio is tuned
to that talkgroup and affiliated to the tower you are listening to.
The only way you would hear a Chicago talkgroup is if a radio is tuned
to that talkgroup in your area.

We have ID'd several talkgroups from 1278 thru 1285 as assigned to the Department of Natural Resources (DNR) (Formerly known as Conservation) ("F" cars) . There may well be others.

1284 is believed to be DNR Region 2 Detail A based on what we've heard.

As an aside, we also have ID'd 1226 thru 1237 as assigned to Secretary of State (SOS) units ("J" cars)

1989. New way to listen to S. Central Starcom21 Scanner

Yahoo group: StarCom21
Date: 2007-10-07 15:12:36 UTC
From: Mike
Topic: 1989 Message: 1989

I have joined another new area which allows me to broadcast my scanner still on Teamspeak but now using many other programs you will be able to listen.

Visit http://www.scanillinois.net for the scanner site.

My scanner covers Starcom 21 Digital Audio including Dist 12, 10, 13, and 19 ISP's as well as analog Clay County, Richland County, Wayne County, Marion County, and Effingham County's TRS.

Fun Details about the site....

> Audio is recorded and archived for 2 weeks for playback in 15 minute intervals

> Pick the program you want to use, Real Audio Player, Winamp, Windows Media Player or use the Webplayer

>No download required, no registration etc

> IT's free!

1990. 41 CARMA Profiles Updated!

Yahoo group: StarCom21
Date: 2007-10-07 21:36:03 UTC
From: n9jig
Topic: 1990 Message: 1990

The following CARMA Profiles have been updated, most with minor corrections:

Counties:
Bureau, Cass,Champaign, Christian, DeWitt, DuPage,Franklin, Grundy, Jersey, Kane,Lake, LaSalle, Lee, Logan,Macon, Macoupin, Marshal, Mason,Menard, Montgomery, Morgan, Ogle, Putnam, Sangamon, Scott, St Clair,Stark, Warren, Whiteside, Will,Winnebago

Metro:
Cook County Ops, Suburban Cook County, NWCD

Misc:
StarCom21, IL Airports Guide, Ham Radio, Rail Freqs

These have had major updates:
District 15 (Deletion of 800, replaced with StarCom21)
State Radio (Deletion of EDACS, replaced with StarCom21)
McHenry County (Added new TRS)

1991. Re:TG 1278 Active with "1F" Units

Yahoo group: StarCom21
Date: 2007-10-07 21:50:33 UTC
From: Kevin
Topic: 1985 Message: 1991

"1 Frank" units would be Illinois Department of Natural Resources (law enforcement?) units from the agency's Northwest Region (Region 1). You can view a couple of IL DNR region maps at http://www.dnr.state.il.us/Lands/Landmgt/Programs/gbhpa/RegionMap.htm .

In the Chicago area (IL DNR Region 2), DNR Law Enforcement units have been noted on SC 21 TGs 1282 (DNR Region 2 c/c?), 1283 (DNR Region 2 "Law" or "District 4"?) and 1284 (DNR Region 2 Detail A).

Does anyone else have notes on other SC21 DNR TGs in the upper 1200-series TGs??

1992. Starcom 21 TG 9143

Yahoo group: StarCom21
Date: 2007-10-08 19:23:33 UTC
From: Kevin
Topic: 1992 Message: 1992

Hearing unknown user on SC21 TG 9143 via Site 115 (North Cook Co.) this afternoon. The limited traffic I have heard consists of "Operations Desk" and "Guard xxx" units (xxx being the security guard's last name) with radio checks. I'm assuming that this is facility security operations. TG 9142 is Tollway radio techs, unknown if 9143 might be tollway-related or not.

1993. Re: [StarCom21] TG 1278 Active with "1F" Units

Yahoo group: StarCom21

1999. 16000 series TG

Yahoo group: StarCom21
Date: 2007-10-10 14:11:20 UTC
From: N2DUP@aol.com
Topic: 1999 Message: 1999

I wasn't able to write it down at the time, but while traveling through Adams County on Sunday, I saw 16056 or 16054 ... or a similar 16000-series TG pop up on SC21. Any ideas? Never heard the traffic ... just saw the TG while scanning.

Also, I don't have the time to compile it myself, but someone else might be interested in doing this: I travel around the western side of the state, and some of the control channels are duplicated from area to area. For instance, East Moline and Augusta use the same control channel, as I recollect. It might be interesting to make a list of control channels by frequency and then attach sites to them.

2000. More DNR Stuff + Lots of Encrypted Comms

Yahoo group: StarCom21
Date: 2007-10-10 11:44:07 UTC
From: Mike Curtis (KC)
Topic: 1985 Message: 2000

1281 was active yesterday with more DNR units (7F16, 2F25, and a couple 1F units) doing car-to-car type traffic. Also had affiliations show up with 1280, 1283, and 1285 with radios in the same range as the other DNR units. In addition, 9095 (listed as 'Forensic Services Z1') has been fairly busy with encrypted traffic since 10pm last night with many different radio affiliations, some falling into (what should be) the range of D17 and D5 radios.

2010. Re: [StarCom21] District 7

Yahoo group: StarCom21
Date: 2007-10-13 09:35:08 UTC
From: Michael W. Scheel
Topic: 1739 Message: 2010

Over the last three weeks usually late at night, because of my work schedule (3rd shift). These are just the District 7 sites, except for Monmouth.

Andover D1,7,8,14
East Moline T107 D1,5,7,14,17
East Moline T123 D7
Illinois City D7
Joy D7,14
Kewanee (700) D6,7,8,14
Monmouth D7,14
Moline D7
Moline (700) D7,8,14
Victoria D7,8,14

It's funny after all these years of only hearing the Dispatchers and the closest cars. Now that I can hear all the cars in the district, which I knew was out there. District 7 is busy!

Hearing them just fine here off the Peoria simulcast tower. Make sure you don't have the TG locked out lol.

From: jdbuller54
Topic: 2012 Message: 2012

Old isp d15 enforcement 800mhz working as a starcom

I just put the old 800 mhz frequencies (854.9875, 855.2375, 855.4875, 855.7375, 855.9625, 855.9625, 855.9625, 855.9625, 866.1625in a Motorola apco25 system in my bcd396t with dc and d15 talk groups and it is working.

I think I will try the old dc edacs systems also and the old d15 maint 800s

Anyone trying this?

I've been hearing D07-Disp A and D07-C2C on sites 107, 123 and 127. No problems up here. Did they change control channels on the Joy tower? I program ALL the assigned frequencies for each site, not just the known control channels. Just in case.

Has anybody ever tried the GRE Super Amplifier for there scanner? I was wondering how will it boosts the signal strength bars on the Starcom21 system?

2016. Re: [StarCom21] Old isp d15 enforcement 800mhz working as a starcom

Yahoo group: StarCom21
Date: 2007-10-14 06:44:12 UTC
From: Rich Carlson
Topic: 2012 Message: 2016

All the old District 15 and Tollway Maintenance channels have been reassigned to StarCom21, as were the 20 EDACS channels. They are being used at various locations in the Chicago area mostly as they had been previously coordinated there. In order to use them elsewhere in Illinois they would require coordination with other users if any.

Before StarCom21 was "Live" in the Chicago area 3 channels from each of the 2 EDACS networks were removed from service and assigned to the various StarCom21 sites in the area for testing, evaluation and "Pre-use".

Hey guys,

I was on Vacation down in the Oregon/Mount Morris area and I got some traffic from District 11 on my scanner.. the Trooper did not sound like he wasn't up in District 1 but doing a traffic stop in District 11.... could this be skip or something that I might be hearing more often on my scanner down there?

2020. New CARMA StarCom BCD996 Files

Yahoo group: StarCom21
Date: 2007-10-17 03:30:44 UTC
From: Rich Carlson
Topic: 2020 Message: 2020

I have finally completed the updated BCD996T Files for ARC996 and
UASD. They are available for download at
http://www.carmachicago.com/profiles/.

These include 7 files, an Intro page, as well as ARC996 and UASD files
for the North, Center and South Zones of StarCom21.

The file is a Zip archive that expands to a folder containing the data files.

Enjoy!

2021. Re: [StarCom21] District 11 heard all the way from District 01

Yahoo group: StarCom21
Date: 2007-10-17 04:13:42 UTC
From: Rich Carlson
Topic: 2019 Message: 2021

There must have been a System Radio affiliated with a District 11 talkgroup in the area of the tower you heard the traffic from. It is not unusual, sometimes local troopers will listen to other districts (Hey, the guy I was in the Academy with is working tonight, I want to listen to him...) or a District 11 guy was up in the area on his way someplace and listening to his home district.

2034. PSR500 in stock at ScannerMaster

Yahoo group: StarCom21
Date: 2007-10-18 09:15:24 UTC
From: Rich Carlson
Topic: 2034 Message: 2034

The new GRE PSR-500 is now in stock at ScannerMaster. This is the only scanner other than the Uniden BC396 and 996 that is fully StarCom21 compatible.

See http://www.scannermaster.com/PSR_500_p/30-501185.htm for details.

Basically it is an analog/digital handheld that covers VHF Low, High and Air, UHF Air, Low and High, as well as 700 and 800 MHz. ranges.

Price is $499.95.

Enjoy!

From: tweatherford@RadioReference.com
Topic: 2039 Message: 2039

Assuming you were talking about the StarCom feed.

Adjusted the audio card and listened through another computer on teamspeak and I believe it sounds great now.

Thanks
Terry

David Nordmann wrote:

Terry the audio cuts in and out and there is not
enough high frequencies. Sounds too low. David N.

From: Kevin
Topic: 2040 Message: 2040

I've been hearing intermittent radio checks, etc. on Starcom 21 TG 4085 (North and South Cook County sites) - but up until now have not been able to figure our who the user is. This afternoon, I heard one user say that they had a power outage at their location (9901 S. King Drive) - thanks to Google, I discovered that this is the location of the Secretary of State "Chicago South" Drivers Facility. The other user did not seem to be at this facility, which leads me to believe that this TG might be used for facility security at multiple Chicago-area SOS drivers facilities.

2044. SC21 4128 & other StarCom21 notes

Yahoo group: StarCom21
Date: 2007-10-21 22:03:18 UTC
From: n9jig
Topic: 2044 Message: 2044

Heard 2 units, one who said he was the "District 11 CPO" chatting casually on TG 4128 on the
Decatur tower as we drove thru there. Not sure what or who they were.

As we drove thru central Illinois we noticed that the non-simulcast StarCom towers sound just fine on both the 796 and 996, but when we were near Champaign listening to the MetCad simulcast system the same choppiness we hear int he Chicago area was present. We might go thru Peoria on the way home, I will see if that simulcast set has the same issues.

I also noticed that the District 9 towers seem to be simulcasting mobile ISPERN traffic, in the
Chicago area I only seem to hear base station traffic repeated. No traffic has been heard on
any IREACH or HF4 patches down here yet.

2047. Knox County

Yahoo group: StarCom21
Date: 2007-10-23 18:45:45 UTC
From: N2DUP@aol.com
Topic: 2047 Message: 2047

A story in the Galesburg Register Mail on Saturday says the Sheriff's Department is applying for a grant for 20 handheld Starcom21 portable radios. I posted recently that they were testing on the usual TG20, and apparently they discovered the SC21 radios fill in gaps in three places on their VHF high system (155.535, 136.5). Other agencies in Knox County are invited to apply under the sheriff's grant application and one community, Knoxville, says it will order one of 10 radio depending whether or not the county goes to StarCom21.

2048. Springfield StarCom21 Notes

Yahoo group: StarCom21
Date: 2007-10-24 01:54:13 UTC
From: n9jig
Topic: 2048 Message: 2048

From Springfield I was able to copy the following sites on my Pro96:
201 Argenta
214 Lincoln
217 Springfield South
227 Taylorville
228 Decatur (IP)
230 Springfield (Hilton)
232 Atterberry
238 Decatur (WXFM)

Had fun listening to the RAT patrol on 13040, the D-9 Local Patch channel. No corresponding traffic was heard on 155.460 though, so I don't know if they were using a Patch or not.

Heard District 5 Dispatch A on a few sites here, must have been a D5 car in the area.

When I get home tomorrow I will go thru my Pro96Com logs to add any new freqs or talkgroups.

2051. New Starcom21 Profile

Yahoo group: StarCom21
Date: 2007-10-27 12:24:03 UTC
From: n9jig
Topic: 1941 Message: 2051

Version 6.2.0 is now available at http://www.carmachicago.com/profiles.

I added the following:
1) Change Log
2) Hex Tower ID/s in the Sites table (For Pro96/2096 and GRE users)
3) Site Callsigns as reported by PRO96COM for some sites.

I updated the following:
1) Several sites had frequencies added as a result of a trip downstate last week and logging
with PRO96COM and direct monitoring.
2) Several TGID's added as a result of this trip, user reports and other sources.
3) Modified table formatting to accommodate above changes.

Please continue to send any updates and corrections!

2052. Listening in District 7

Yahoo group: StarCom21
Date: 2007-10-28 06:12:33 UTC
From: mws72@qconline.com
Topic: 2052 Message: 2052

Some of my findings since the changeover here in District 7.

I rarely hear anything on the D7 ISPERN patch. I hear District 1 ISPERN patch fine through Site 107. If that D7 just came up on ISPERN and I heard no D7 patches. But D1 patch relayed the audio fine.

D7 Dispatch A has 95% of all district dispatch traffic. The few times I have heard any thing on B was for admin or special details in the Galesburg area.

The D7 Car is being used for the first time tonight since the changeover. But then I don't listen 24/7 (darn it).

Is the alert tone still a single tone or is a warble? I am hearing it as a warble tonight on Dispatch A

The times I can hear other sites. I notice the 700 MHz site in Kewanee has all the districts surrounding D7. (1,8,14,17)

I have not heard a south zone talkgroup since late august.

The alert tone is a warble..... but sounds even more "warbley" after being digitized.

Is District 7 still using any high band or low band?
Is District 7 using 67.0 PL on ISPERN broadcasts?

Good info, thanks!

From: John Zelz
Topic: 2052 Message: 2054

I think that the alert tone issue you are hearing is due to the analog to digital then digital back to analog conversions. I have noticed similar quality, especially when NWCD sends analog tones out over their system

2061. TG 4132

Yahoo group: StarCom21
Date: 2007-10-29 14:55:20 UTC
From: N2DUP@aol.com
Topic: 2061 Message: 2061

TG 4132 was heard on the Macomb tower today. As I recall from other discussions on the list, this is IDNR.

Date: 2007-10-31 23:43:40 UTC
From: tweatherford@RadioReference.com
Topic: 2065 Message: 2065

NEW
7402 IDNR Region 4 - units talking about being at Horseshoe Lake State Park (west of Collinsville)

so appears 7400-7408 May be Region 4

7314 (formerly unid Madison County), heard Adam-36 going 10-41 at 1815, this would appear to be rural dispatch units.... most of which I assume are still on VHF but must be at least one now (Adam is Rural PDs)

Traffic
7042 previously unid, possible St Clair County Highway, voice, still couldn't tell what it was

Edwardsville Tower (around 4pm)
A45 calling Springfield on D09
8-55 making traffic stops on D09 TG-A with "springfield"
picking up many units on D13 TG-A

Thought I heard 24-John-16 going 10-42 on D13 TG A

Been an open carrier on 154.68 for about 6 hours now in the Edwardsville area.

2066. A note of interest

From: Ron Handke
Topic: 2065 Message: 2066

For those that seem interested in the State Police, it should be noted that the Funeral for the young SP Trooper killed in an accident with 2 DUI's was today at Pana, thus this may have created much of the radio traffic you have heard in that area.
I would hope that all on the list would take a moment to reflect to this happing and keep the family in there prayers thru this happening.

http://www.npstc.org/documents/IO-0060B-20070612%20Standard%20Channel%
20Nomenclature%20Final.pdf

National Public Safety Telecommunications Council (NPSTC)
Channel Naming Report, June 2007

National Public Safety Telecommunications Council
NCC / NPSTC Standard Channel Nomenclature for the
Public Safety Interoperability Channels
Revised June 2007

"This document outlines the NCC / NPSTC Standard Channel Nomenclature
for Public Safety Interoperability Channels as revised in June of
2007. The requirement for a common naming protocol for public
safety's interoperability frequencies was identified in early 2000 by
the Public Safety National Coordination Committee (NCC), a Federal
Advisory Committee chartered by the Federal Communications Commission
(FCC) that operated from 1999 to 2003, and provided recommendations
to the Commission on operational and technical parameters for use of
the 700 MHz public safety band."

"While the FCC declined at that time to mandate such a standard
channel nomenclature, the NCC protocol has received wide acceptance
within the public safety communications community, as communications
interoperability for public safety's first responders continues to be
a major issue."

Been a carrier on 154.68 CSQ for about 3 days now.

Strong in Edwardsville area, possibly coming from the State Police tower at SIUE (IL-157, north of I-270)

Can not hear on handheld at my home (Glen Carbon), but did hear on handheld in the Edwardsville business district.

I am not able to research the transmitter.

Thanks!

I took a field trip to Belvidere after the CARMA meeting and found the Sheriff to be using TG 1376 for Dispatch.

I think they were using this for both Belvidere PD and the Sheriff. I heard no fire traffic, nor
did I hear any of the Boone County VHF channels in operation.

While there I set my 396 on just the Belvidere Site 112, and heard absolutely no other traffic other that 1376 on this site.

Saturday there was a very strong increase of the Godfrey tower and East St. Louis (it seemed).

Godfrey is coming in nearly full scale in car on the HT rubber ducky now.

Still can't pick up Mt. Olive at all.

Edwardsville is still VERY directional, 4 miles south of tower, signal still barely detectable.

well the same for the Beaver Dam signals Then at various times
during the day Mt. Olive would be normal and then it would not be
there. I will be going on the main tower this week with a 800 gain
antenna about 50' with good coax so may make a diff. I have one
mobile now and Taylorville and Decatur can be heard while travelling
to Springfield I have yet to hear anything on the Dist 18 freq you
gave here for some reason. The Mt. Olive signal is really odd as it
worked great here wonder if they changed freqs or something

2080. Oddities in "Neighbor Sites" In Pro96Com

Yahoo group: StarCom21
Date: 2007-11-05 02:32:49 UTC
From: Mike Curtis (KC)
Topic: 2080 Message: 2080

I've noticed something strange in the listing of some of the "Neighbor Sites" in Pro96Com ... For example, I'm monitoring T134 (Ottawa) and under "Neighbor Sites", it lists "001" (774.28125) and "031" (866.9500). Now I know 866.9500 is T131 (La Salle) and 774.28125 is T101 (DuPage). Normally I would chalk it up to a decoding problem in Pro96Com even though I've deleted T134 and let it rebuild it. When traveling today, on monitor T131 (La Salle), it shows a neighbor of "034" (866.8375) which should be T134 (Ottawa). Could this be something in the new version of Pro96Com, or is this a symptom of a problem with StarCom? I know in past weeks T131 has had "issues", normally on Wednesdays according to the D17 units ;)

Correction on my end....

Mt Olive is now coming in.... at Glen Carbon on my base, and was in the Mitchell area (Madison County, near Granite City), on hand held.

By the way.... I've previously said that setting the modulation to FM opposed to Auto (which usually defaults to NFM) does not help, but it definately has helped from my observations today. (When using hand held far away from all sites.)

I just bought a Uniden BCD396T and it works great on the StarCom21
system as well as our new APCO-25 county system here in Champaign. :)

Rich,

You can add 1377 as a car to car channel for Boone County. I caught it on an overnight log last night.

Mark

n9jig <rich.n9jig@...> wrote:
I took a field trip to Belvidere after the CARMA meeting and found the Sheriff to be using TG 1376 for Dispatch.

I think they were using this for both Belvidere PD and the Sheriff. I heard no fire traffic, nor
did I hear any of the Boone County VHF channels in operation.

While there I set my 396 on just the Belvidere Site 112, and heard absolutely no other traffic other that 1376 on this site.

I concure as the BCD396T works quite well. May I recommend buying software to ease the learning curve and save the time of manually loading everything. I use Butel and have found it to be very easy to work with.

Like everything, there are differing opinions out there. These are mine.

Here is the latest from the Belvidere Site and Boone County SPD

1376 Boone CSPD Dispatch
1377 believed to be Boone CSPD C2C
1378 Unknown (tactical maybe?)

If anyone wants a complete 48 hour listing of all TG's on the site let me know and I will post it.

2091. [Fwd: (CARMA) STARCOM21 Problem: Amusing or Worrisom?]

Yahoo group: StarCom21
Date: 2007-11-07 00:06:49 UTC
From: tweatherford@RadioReference.com
Topic: 2091 Message: 2091

Traveling through southern Illinois Sunday afternoon - heard on TG17000 (as best I recall)...trooper asked telecommunicator if he had heard the previous 3 messages trooper had sent.
Telecomm said no.
Trooper asked if telecomm was keeping a log of Starcom21 problems.
Telecomm said he hadn't heard trooper's previous messages.
Trooper asks, I know but are you keeping a log of Starcom21 problems?
Telecomm said he hadn't heard trooper's previous messages.
Trooper says, it's not the telecommunicator's fault. It's a system fault. Are you keeping...?
Telecomm said he hadn't heard trooper's previous messages.

This communication problem, regarding a communication problem, ended with no resolution as far as I could hear.

I did think SC21 sounded clearer, maybe more human-like, and had fewer drops even over previously unthinkable distances in southern Illinois versus up here in Chicagoland.

Now I'm going to go flip all the P25 systems in my BCD396T from "auto" trunk mode to "FM" and see if that does any good. Learn something every day on this Board.

Bill E.

NEW
7312 - unid, heard "David"
7355 - unid, "meet me in Troy" (city), heard units 417 & 429, heard going to eat in Granite City

Updates
750 is East Alton Police Department - doing LOTS of testing all over the village
7314 is Madison County Sheriff: Rural Law Dispatch (heard A-36, which is Hamel PD)

Traffic
17041 D11 IREACH heard key-up
17043 D11 Patch, a lot of hits on 10/30 & 10/31, possibly 155.46, doing a speed patrol, sounds like it is picking up interference from 155.475 ISPERN broadcasts
17088 continued ENC use

No they are not

At the moment, the only radios completely compatible with StarCom are the Uniden 396 & 996 and the GRE PSR-500 & PSR-600. Other digital scanners, the Uniden 296 and PRO-96 can only receive the 800 MHz StarCom sites.

RE-EDIT.... should try to think hard when I'm sick.

312

D18 Macoupin (Mount Olive)

774.03125

774.33125*

774.58125*

775.03125*

775.29375

775.53125

775.84375

The only Control Channels I can hear here at home in Glen Carbon
--774.28125 East St. Louis
--774.34375 Edwardsville (very wide modulation, I'm less than 1 mile from the site)

With squelch all the way down, I can not hear any other control channels, so its either out of my range, changed or gone.

Not sure! Will have to check the next time a few miles north or if the band opens up.

VHF was great tonight (well 2m Ham!)

According to the IDNR Law Enforcement district map
http://dnr.state.il.us/Law3/images/consmaplg.pdf , District 6 is located
in Region 1. Did they make reference to any particular location? That
might help narrow down which district this TG belongs to.

because of the highly directional signals of the transmitters, you may never pick up some of them.

10 miles south of Edwardsville, you can't pick up the Edwardsville site on a handheld, barely with a mobile antenna.

Edwardsville seems to point to the east and slightly north covering northern Madison County and maybe Bond.

Taylorville doesn't come in at I-55 so assuming the south Spfld and Nilwood sites cover southern Sangamon and N Macoupin/Montgomery.

Godfrey appears to cover northwestern to central Madison County and thats it.

Glad to hear you got a new anteanna!

So are you hearing Mt Olive now? What control channel?

Thanks
Terry

I have a 996T mobile and hear Taylorvile fine around Raymond on the interstate with a 800 mag mount as well as the Springfield sites. Was surprised that I didnt get them here but of course dont need them. I do hear Godfrey and Edwardsville on I55 when I go to Maryville. I know they can phase the antennas and make them go in whatever pattern they want. I took the channel that you had send earlier out and put the ones in that you sent in the list 775.312 shows the dat so guess that is it. Was interested to see if there was any change in coverage this AM with some inversion but none.

State equips Eastern, Lake Land with new emergency radios

By LISA BARTELT, Staff Writer
lbartelt@...

The newest additions to two area police departments are tools they hope they never have to use.

Law enforcement units at Eastern Illinois University in Charleston and Lake Land College in Mattoon recently received STARCOM 21 radios from the state of Illinois. Both schools sent officers Thursday to Springfield to pick up the radios and attend training on how to use them.

Lake Land Chief of Police Randy Ervin said the college received three of the radios, and he and Sgt. Chad Smith have been trained. Ervin said they will pass along the training to the other three full-time and eight part-time officers.

EIU Police Lt. John Hatfill said the university received eight radios, and he and another officer were trained.

Ervin said the radios are designed for use in an emergency, such as a fire, tornado or a shooting on campus, where the department would receive mutual aid from other emergency responders.

The departments' current radios have a statewide police emergency channel, but fire departments and ambulances aren't on that frequency, Ervin said. Emergency responders from outside of Illinois also wouldn't have that frequency, he said.

"Could we communicate? Sure. But (with the new radios) it'll be easier to communicate with a wider variety of emergency responders," he said.

Not only that, Hatfill said, but the STARCOM radios provide a better signal.

"These work more like a cell phone," he said. "They get their signal from a tower. Our regular police radios communicate by sending a signal to a repeater to whatever location you're trying to broadcast to. The clarity will be much better."

The new radios do not replace the departments' current communicators, Hatfill said.

"This is not something the officers will carry or utilize on a daily basis," he said.

Last year, Eastern received a STARCOM base radio, which is meant to be used in a vehicle or a mobile command unit, Hatfill said. The radios picked up last week are all portable, he said.

Ervin said after the initial training of officers, he intends to provide an annual refresher of the training.

“Chances are, these will never be used, or it will be a long time before they are,” he said. “After a certain amount of time, you’ll get rusty.”

The three radios are adequate for the department’s needs, Ervin said, because usually, two officers are on duty, leaving one radio for the dispatcher.

Hatfill said Eastern does not have enough of the new radios to supply every officer, but that’s not what they’re designed for. He said they’d be used in a central location, such as in an incident command center.

The state distributed more than 300 radios to 70 state colleges and universities. STARCOM is a statewide communication system created by the state and Motorola.

I love the part where it says they can communicate with more people. Considering the people they can communicate with State Police, Health Department etc on Starcom 21 aren't all that important as relaying a location to Fire, or EMS for a call or where they are needed.

I would hope that they have some sort of interops and keep their VHF's

For instance, do you know that the Starcom portables don't allow access to the VHF's for the local areas they are in, so if they are doing traffic control etc in your county, they actually have to go to the car to talk to the area's dispatch or officers, and they really have no way of hearing traffic unless they are in the car.

2118. DNR D19 Talkaround

Yahoo group: StarCom21
Date: 2007-11-18 03:02:07 UTC
From: Mike Curtis (KC)
Topic: 2118 Message: 2118

Heard some traffic today on TG 4129 with an unknown Frank unit (didn't catch the beginning) calling another on "DNR District 19 Talkaround". This was on T236 (Decatur). Looking at the DNR map, the district fits for this county.

From: Kevin
Topic: 2061 Message: 2122

My notes indicate that, so far, IDNR law ops for Regions 1 & 2 have been reported in the 1278-1285 range, Region 3 TGs in the 4128-4132 range, and Region 4 (&5?) in the 7400-7410 range. Nothing hard and fast, just monitoring reports thus far.

Deer hunting season should provide plenty of opportunities to try to further pin down DNR law TGs and their region/district usage.

2123. Chicago City Colleges test on SC21 TG 30304

Yahoo group: StarCom21
Date: 2007-11-19 20:22:53 UTC
From: Kevin
Topic: 2123 Message: 2123

For the second time in as many weeks, I'm hearing a radio test by the Chicago City Colleges district security office on SC21 TG 30304 (ITTF Region 5 TG) on Monday at 2pm. The district office calls the various colleges one at a time, but none of the colleges answered the first couple of rounds of radio checks. Some of them are answering about 10-15 minutes later (after phone calls from the district office?). Truman College answered on 30320 (ITTF Region 8 TG).

Steep learing curve, no doubt.

Will practice make perfect? Doubtful, IMHO....

You would only receive them if their is a starcom 21 radio programmed with their talkgroup using a tower in your area. It is like a cellphone network. If someone takes their radio and roams, then it turns on towers close to them.

There are statewide talk groups and regional talk groups. If someone keys up on a state wide talk group every radio on the system could feasibly hear the transmission. The MABAS (Mutual Aid Box Alarm System "Fire") and JTTF (Joint Terrorism Task Force "Law Enforcement") Talk Groups are state wide talk groups so there can be state wide cooperation. There are several regions (19) through out the state for disaster purposes. These regions also have their own talk group. The purpose for these are, if there is a disaster in one part of the state they can communicate in that region and not interfere with a disaster in another area of the state. Supposedly Each County in the state should have been afforded the opportunity to obtain a Star Com radio for disaster purposes. Some Agencies did not request a radio and were not forced to take the radio even though there was no cost.

> There are statewide talk groups and regional talk groups. If someone keys up on a state wide talk group every radio on the system could feasibly hear the transmission. The MABAS (Mutual Aid Box Alarm System "Fire") and JTTF (Joint Terrorism Task Force "Law Enforcement") Talk Groups are state wide talk groups so there can be state wide cooperation. There are several regions (19) through out the state for disaster purposes. These regions also have their own talk group. The purpose for these are, if there is a disaster in one part of the state they can communicate in that region and not interfere with a disaster in another area of the state. Supposedly Each County in the state should have been afforded the opportunity to obtain a Star Com radio for disaster purposes. Some Agencies did not request a radio and were not forced to take the radio even though there was no cost.

2128. Received Signals Breaking Up

Yahoo group: StarCom21
Date: 2007-11-23 01:17:58 UTC
From: Greg Scheff
Topic: 2128 Message: 2128

I am running a new BCD996T and have only Starcom 21 District 2 and District 5 programmed in it so far. I am new to the digital scanning and every time a signal is received the voice breaks up and the signal strength comes and goes. I've yet to be able to make out one conversation completely. I've tried adjusting the squelch with no results. I assume either my location has weak signals or maybe my set up is not correct on the scanner. I live in the western suburbs of Chicago in N E Will County. I have a discone antenna with low loss cable going to it that I also run a BC796D with and have no trouble receiving anything "non digital". I am programming frequency's through the ARC996 software. Any suggestions would be much appreciated.
Thanks,
Greg

2129. Re: [StarCom21] Received Signals Breaking Up

This is a common problem with simulcast sites. I have heard Moto techs discussing this (on Starcom and elsewhere) as issues getting the simulcast sites synched properly.

After similar issues were had with the Michigan MPSCS system there were firmware updates that helped alleviate the issue for Radio Shack and Uniden scanners, and I know that Uniden is actively working on the issue.

Some scannists here had luck with reducing the antenna effectiveness, so that they were only in range of a single tower of the simulcast set.

From: dataman60435
Topic: 2130 Message: 2130

I do not have a 996 but use a 396-H/H on a outside RS groundplane with RG6 coax, i live in Joliet near District 5...I get 98% coverage on T101-Dupage and T102-Cook Co South with seldom dropouts...But on T113-D5 the CC is always fluttering...Actually now with the recent upgrades on the GRE-PSR500 that tower T113-D5 is better on that scanner...Ron in Joliet

2131. Starcom 21 Breakup

Yahoo group: StarCom21
Date: 2007-11-25 14:57:17 UTC
From: miapaisano
Topic: 2131 Message: 2131

Everyone seems to be having reception problems with Starcom 21. Signals breaking up, incomplete conversations, no reception etc. All postings relate to antenna quality, type of radio used, distance from the control tower etc. as the potential couse of the problems.

My question is if the various agencies can get good reception, why can't we? While we scanners have many reception problems, it appears the police, fire etc. are not having these problems.
What are the various talkgroups in Starcom 21 using that we are not? Do they have better radios? Do they have better antennas? We are just as close to the control tower as they are. Yet they can communicate effectively and we get poor reception. And they are communicating effectively NOW.

We have state of the art radios (mine is a GRE PSR-500) our antennas are of good quality or better and we are not trying to scan from some reremote location so, there must be a reason why the talkgroups have no communication problems and we do.

Just plain stumped!!!

Its not just listeners complaining, I have heard from local police, that ISP troopers hate the system, they get talked over all the time, they have to repeat themselves, and they have to ask the dispatchers to repeat themselves sometimes several times before they understand what is being said. Their are times and areas with very little coverage.

In general I think the problem is that they failed to test the system well. They issued a few portables say 10 or so, and had them spread out around an ISP district they were told to talk to each other, and they could. They needed to issue the whole system as a trial (backup) to start, then slowly jump into it. I mean most of us know that the ISP or Motorola one kept pushing back the release dates.

I think that is is wierd that some smaller counties have 2 or 3 towers, while larger counties are with maybe only one. In Southern and Central Illinois the problem seems to be that the towers are not enough in some areas, they should have considered a few more in dead areas, or low signal areas. But I don't run the system, and none of us do, we can just sit here and listen to our state spending millions for a piece of static. But we can be glad they did, since most of us were not able to hear anything but dispatch before.

Most of the issues in northern I'll has to do with synching simulcast towers. southern IL issues seem to be more topographic in nature. Uo north the land is remarkebly flat, They actually have topography south of I-70!

I've actually heard a number (12+ the past month or so) of conversations on car-car or talkaround TGs that contained snippets and even entire conversations about how bad Starcom has been performing in certain areas. Both ISP and IDNR Conservation police units have been trashing the system's performance from time to time. I have to agree with Rich, as south of I-74 the issues have been mostly related to poor coverage in certain areas.

Here in the District 18, 11 areas, I have not heard many complaints at all, BUT we have A LOT of towers in the area, except for the Montgomery/Bond/Clinton County areas.

Have heard a few complaints, some "repeats" but in general in the MetroEast it's great.... but again, this is one of the parts of the system that was built for portables PLUS the St. Clair County system has multiple (& redundant) sites in that area.

Calhoun County, one of the smallest in area/population in the state seems to have more sites than the rest... BUT it's on the Illinois River with many high bluffs.....

Also, have heard the DNR police having no problem literally out in the "field" talking back (either on VR-Vehicular Repeater) or directly to a site on portable.

Again, odd type, digitalized sounds are gone around here... heard them at first, but now its just not there like it used to be. Many sites have seem to be re-tuned/powered up to provide better coverage.

Of course, as said, I'm sure MUCH more testing should have been done before ANYONE dropped (or drops) their current system.

My local PD was on a mid-power 450 mhz system that often could not pick up the portables. NOW on SC21, its great..... rarely an issue.
I've never heard a complaint from Madison County and the St. Clair County system seems to be awesome.

My 3 cents.

Terry

Topic: 2138 Message: 2138

Here in the Joliet ILL area using now the GRE PSR500 with the new upgrades in the radio listening to T101,102,113,125,126 with a RS800 rubber duck has made a big improvement...It performs better than my Uniden 396 with the same antenna...On T125-Grundy Co which is not a simulcast tower i get 98% coverage on Districts 5,6,17,21...This tower is about 22m from my location...On T101,102,126 im about 30m and the signals are 90% stable with about 10% at certain times drop-outs...It seems as tho there tuning this system better everyday...With no leaves on the trees it has seemed to help...In my area and my opinion the GRE seems better at decode,audio,sensativity on Starcom...This is my personal opinion and the opinion of a friend with the GRE living in Lockport area....Ron in Joliet

In case no one has ever heard of it, this is a great program and group to join.

The person who writes the software (from the UK) is VERY active in the group and responds to all questions.

http://groups.yahoo.com/group/bctool/

Enjoy!
Terry

Description

A group for users/testers of bcTool, an application to program and control Uniden Bearcat Dynamic Memory scanners. Please note that scanners which do not use DMA technology are NOT supported.

Supported scanners are:
- Uniden UBC3500XLT

- Uniden BCT15

- Uniden BCD396T

- Uniden BCD330T

- Uniden BCD996T
Support is currently being added for the following scanners, if you have one of these devices and want to help please join:
- Uniden BC246T

- Uniden SC230
If you're interested in bcTool please join this group, I will make regular status announcements and take bug reports through it.

bcTool is currently rapidly approaching a first release version after a couple of weeks of solid development and testing. Please join up if you are interested in helping to develop this software, all are welcome. Some screenshots and info here: http://www.bctool.org.

Thanks!

RECENT ADDITION:
IF YOU WOULD LIKE TO JOIN THIS GROUP, PLEASE STATE THE REASON YOU WOULD LIKE TO JOIN. SIMPLY STATING "hello" OR SIMILAR IS NOT A VALID REASON! (we are not trying to be awkward, but attempting to prevent current & future members from receiving spam email through the group). Aubs

2147. MetroEast/Springfield Updates

Yahoo group: StarCom21
Date: 2007-12-07 02:05:54 UTC
From: tweatherford@RadioReference.com
Topic: 2147 Message: 2147

NEW
Just noticed something new at the "U-TURN medians" on I-55 from Springfield down to Edwardsville.
There are two narrow slats (on each side with the old ISP stripes) to make it look like a cop is sitting there.
FUNNY THING... they don't seem to reflect, LOL.

Updates
750 East Alton Police Department, test period appears to be over, no traffic since November 16.
4001 hit in Springfield (12/6/07)
4091 is SOS District 3 Car-to-Car (Id'd by 3J2)
7137 is F-2

Correction
7207 is NOT Freeburg Police, it is O'Fallon Fire Department Fireground (units 4314, 4329, 4321, 4310)
***"accountability","command","possibly called 'Scene of Action')

Heard
13082 Illinois State Police Academy: Training C
***Heard multiple conversations, with units calling "Elgin" and "Fairgrounds Units"
Units like: 109, 2-5998 or just 5998, 6009,
***Heard domestic in progress and could hear it in the background

151.505 D072 "CENCOM" full scale at Divernon exit south of Springfield, this is the UNLICENSED base/repeater in Springfield for Air-Evac

Illinois Cooperative Assocation/Clearktalk
http://radioreference.com/modules.php?name=TRSDB&sid=2711&d=trsinfo
Heard Edgar County Sheriff Dispatch on
34864 Edgar County Sheriff - Dispatch (in Springfield !!!!)

OF COURSE
there is someone on the list who IS an "inside source", because they are a real source on the inside of the operations of St. Clair County, but we've yet to hear from them on the actual talk groups, even though others have been confirmed from other members of public safety agencies in St. Clair County.

2148. Illinois counties get grants for Starcom radios.

Yahoo group: StarCom21

wjbdradio.com
Five Area Sheriff's Departments Get Grant to Upgrade Radio Systems
12/6/07 @ 8:48:11 pm

Five area sheriff's departments have been awarded a $220,000 grant to upgrade their radio equipment to the new Motorola Starcom system. The counties involved are Marion, Clay, Effingham, Fayette and Jasper Counties.

Marion County Sheriff Brad Wolenhaupt is pleased with the announcement. However, he says even though the grant will pay for 80-percent of the cost of the radios, there are still monentary concerns that will have to be considered by the county board. Namely the monthly usage charge that is expected to be more than $50 per month per radio. Wolenhaupt says while the radios will be advantagous to the department at certain places and time, the issue now will be user fees. He feels they will dictate how often the department will utilize the radios and if they will be activated as soon as they arrive.

The sheriff's department has been trying to find a solution to 'dead' spots in the county where deputies are unable to communicate with the office. Wolenhaupt says the STARCOM radios would solve that problem as well as allowing radio communication to other agencies around the state.

Governor Rod Blagojevich announced the grant Thursday morning. Clinton County is included in another regional application to purchase the STARCOM radios.

Meanwhile, Wolenhaupt says the sheriff's department will continue to look at other options to solve its radio communication problems.

2150. New Pro96com Tower Files uploaded to the files section

Yahoo group: StarCom21
Date: 2007-12-09 01:50:52 UTC
From: citrus801
Topic: 2150 Message: 2150

I posted many Pro96com Tower###.txt files here -
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/

A few are from the fall, but most of them were ones I collected over Thanksgiving. I didn't always leave the scanner on a site for very long (with the exception of 202, 207, 231, 229, 203, and 206) so I may have/likely have missed some voice channels on the other sites. Still, it'll have the most recent control/alt control channel freqs and adjacent site references. I left it on 700 MHz sites for as long as I could receive them for obvious reasons. I'm finding that many 800 MHz sites are not using all the freqs they are licensed for. For example, site 207 Pontiac is only using three freqs (1 control ch plus two voice) but they carry the most traffic from any site I've seen (it regularly carries ISP Districts: 6, 21, 8, 17, and McLean County Sheriff).

Here are the site .txt files that I posted:

From: Mike Curtis (KC)
Topic: 2148 Message: 2151

For a base/mobile scanner, the BCD996T ... For a handheld, I still like the 396T. There's also the GRE PSR-500, but I've been more impressed with the Uniden offerings personally. The 396, 996, and GRE 500/600 are the only radios currently capable to tracking both the 800 MHz AND 700 MHz StarCom sites.

2152. Dupo fd now on 800mhz

Yahoo group: StarCom21
Date: 2007-12-09 02:50:30 UTC
From: Jim
Topic: 2152 Message: 2152

as of friday dec 7th the Dupo Fire/EMS is now using the 800mhz radio for calls. They still are being dispatched on vhf but then they switch over to the 800 mhz. What the freqs are I don't know.

2153. RadioConsole for 2000-2005 Impala

Yahoo group: StarCom21
Date: 2007-12-09 04:39:31 UTC
From: Frank Whitmore
Topic: 2153 Message: 2153

I just traded in my 2004 Impala. I had installed a Jotto Desk radio console in it, and now I am looking to sell it. Cheap.

Check it out at:
http://www.jottodesk.com/Comersus/store/comersus_viewItem.asp?idProduct=22

I have faceplates to fit the BC780XLT (it also fit my BCD996T) and a Kenwood TM271A. Also included is one blank faceplate, and a faceplate with 3 cigarette plugs. You can buy faceplates from Jotto Desk to fit virtually any radio you can imagine. If you're interested in the radios also, maybe we can work something out. I'm not sure they'll fit in my new Hummer. (The BCD996T is NOT for sale!)

This console will fit 2000-2005 Chevy Impalas. Refer to the like above for details. Retail is $272. Yours for $75 plus shipping, radios not included.

Frank Whitmore,
N9DIZ

I really miss the state calls right now. My county (Pike) is still on my scanner, and right now we have about an inch of ice on everything. My 85 year old mother is trapped in her house about 25 miles from me and we can't get to her, but the county is sending a deputy to try. She has 4 or 5 trees down on her house and the door is blocked. One of the trees took a pole with a transformer on it. Luckily she has a gravity flow furnace and county water so she can at least stay warm. She still has phone service for now also. I know there a lot of calls for the county right now with downed power lines all over, some trees catching fire from them also. Since I am not hearing the state calls, I don't know how the interstate is doing. I can see part of it from our house and hardly any traffic thank goodness. Have heard several roll over accidents called into the different county ambulances and fire departments also. It is really bad up here.

Five Area Sheriff's Departments Get Grant to Upgrade Radio Systems
12/6/07 @ 8:48:11 pm

Five area sheriff's departments have been awarded a $220,000 grant to
upgrade their radio equipment to the new Motorola Starcom system. The

counties involved are Marion, Clay, Effingham, Fayette and Jasper Counties.

Marion County Sheriff Brad Wolenhaupt is pleased with the announcement. However, he says even though the grant will pay for 80-percent of the cost of the radios, there are still monentary concerns that will have to be considered by the county board. Namely the monthly usage charge that is expected to be more than $50 per month per radio. Wolenhaupt says while the radios will be advantagous to the department at certain places and time, the issue now will be user fees. He feels they will dictate how often the department will utilize the radios and if they will be activated as soon as they arrive.

The sheriff's department has been trying to find a solution to 'dead' spots in the county where deputies are unable to communicate with the office. Wolenhaupt says the STARCOM radios would solve that problem as well as allowing radio communication to other agencies around the state.

Governor Rod Blagojevich announced the grant Thursday morning. Clinton County is included in another regional application to purchase the STARCOM radios.

Meanwhile, Wolenhaupt says the sheriff's department will continue to look at other options to solve its radio communication problems.

From: scannerfan3155
Topic: 2159 Message: 2159

Hello,

I am new to StarComm21 scanning, I have been scanning EDACS, about 4 years. I own a pro96 scanner, and was recently able to get my scanner programed for StarCom21. Right now I only have the sites listed in the CARMA PDF (Zion, Sylvan Lake, Fox Lake). I am wondering if there are others as this document shows Gurnee, Libertyville, Highland park as sites, but with no listed frequencies.

Regards,
Mark

Subject: Re: [StarCom21] BC996 OR BC396

I have several 996's and a 396. While the 996 has some features not present or needed on the 396, such as GPS ability they are very similar.

The biggest difference between the two other than the obvious mobile vs. handheld situation is that the 996 has a "Sites" feature that allows one to share a set of talkgroups between many different Sites, this combined with the GPS capabilities makes the radio ideally suited for wide area systems like StarCom21.

Here in the Joliet ILL area using now the GRE PSR500 with the new upgrades in the radio listening to T101,102,113,125,126 with a RS800 rubber duck has made a big improvement...It performs better than my Uniden 396 with the same antenna...On T125-Grundy Co which is not a simulcast tower i get 98% coverage on Districts 5,6,17,21...This tower is about 22m from my location...On T101,102,126 im about 30m and the signals are 90% stable with about 10% at certain times drop-outs...It seems as tho there tuning this system better everyday...With no leaves on the trees it has seemed to help...In my area and my opinion the GRE seems better at decode,audio,sensativity on Starcom...This is my personal opinion and the opinion of a friend with the GRE living in Lockport area....Ron in Joliet

Not particularly a helpful response.

Not sure how you consider them to be Apples and Oranges Both are APCO 25 compatible scanners, capable of monitoring the StarCom21 system

I've googled extensively and don't really see anyone doing the comparison between the two manufacturers equipment

I thought maybe some might actually have tried both and had some real world experience to offer

Subject: Re: [StarCom21] BC996 OR BC396

Yes, especially if you get a GPS receiver. The GPS feature alone is worth it's weight in gold. You can get a cheap GPS unit for under $50 to connect to it and let the radio turn on and off the Sites automagically. This works for conventional as well as trunked systems.

I have 3 996's, two in the car, both connected to the same GPS (it also connects to a BC15 as well!)

2169. RE: [StarCom21] BC996 OR BC396

Yahoo group: StarCom21
Date: 2007-12-17 05:24:56 UTC
From: Frank Whitmore
Topic: 1771 Message: 2169

I have both the BCD996T and the BCD396T. I love them both and use them daily. Except for a few minor differences, they are essentially the same from a user standpoint. The 996 does have a few features that I like. The GPS switching of systems is fantastic if you mount it in your vehicle. I have programmed different sites for areas I drive through regularly, and I don't have to do a thing, it just switches the systems on and off on its own, based on how close I am to that site.

I also like the Multi-site trunking. For trunked systems that are linked and share the same talkgroups, you don't have to program the talkgroups over and over (eating up memory) for each site, as you do with the 396 and the 246.

They are both great radios, so why not get both?!? Just kidding, they are pretty expensive. I guess it depends on what you need and how you will use it. If you are just going to use it at home, either one would be fine. The 996 would be easier to program and operate at home or in a car, But the 396 is more flexible because you can use it at home, in your car, and carry it with you on a walk, or whatever.

If I could only afford one, I'd get the 396, which is what I bought first. I loved it so much I eventually saved up enough overtime $$ to buy the 996 and the Remote Head.

Hope this helps.

-- Frank

Cris Hanna <crishanna@...> wrote:
Thanks Rich
Are you considering getting a GRE unit or are you sufficiently satisfied with the 996
Anything you wish was on the 996 that is on the 396?
Appreciate your feedback

To: StarCom21@yahoogroups.com
Subject: Re: [StarCom21] BC996 OR BC396

Yes, especially if you get a GPS receiver. The GPS feature alone is worth it's weight in gold. You can get a cheap GPS unit for under $50 to connect to it and let the radio turn on and off the Sites automagically. This works for conventional as well as trunked systems.

I have 3 996's, two in the car, both connected to the same GPS (it also connects to a BC15 as well!)

Rich,
Hope you'll pardon my dragging up an old thread, but I'm pretty ready to buy and always appreciate real world experience

I drive throughout many different ISP Districts and Indiana (want to monitor the Hoosier SAFE-T 800 Mhz system), so based on your comments, you'd recommend the 996 for this purpose??

Subject: Re: [StarCom21] BC996 OR BC396

I have several 996's and a 396. While the 996 has some features not present or needed on the 396, such as GPS ability they are very similar.

The biggest difference between the two other than the obvious mobile vs. handheld situation is that the 996 has a "Sites" feature that allows one to share a set of talkgroups between many different Sites, this combined with the GPS capabilities makes the radio ideally suited for wide area systems like StarCom21.

Yes, this is the kind of answers people are looking for.

Not smart ass comments about 'look on the internet' etc....

First hand, reliable, information is great.

I also have a box on the SC21 page, which DOES need updated for the new Scannners.

Glen Carbon PD uses SC21 for all operations

State police thank GCPD for helping

By NORMA MENDOZA, njmendoza@...

12/19/2007

Village responded during Interstate 64 tragedy

(http://bannerads.zwire.com/bannerads/redirect.cfm?ADLOCATION=4000&PAG=461&BRD=2291)

Lt. Jerry Culp, interim commander of District 11 of the Illinois State Police, expressed appreciation to the Glen Carbon Police Department for its assistance during the difficult period when one of its officers was involved in a tragic crash that resulted in two fatalities.

Glen Carbon police handled some calls and traffic situations while ISP was involved with the crash investigation and the duties associated with it. The ISP telecommunicators were also busy directing calls.

Culp thanked Chief David Bradford and the Glen Carbon officers who helped even though it put a strain on Glen Carbon's manpower. He said it is good to know the law enforcement agencies can count on each other in times of need.

The crash on Nov. 23 occurred on Interstate 64 near Exit 19 when an ISP vehicle on the way to a previous crash ran off the highway into the oncoming lanes, striking broadside a car killing two Collinsville teenage sisters.

Bradford read the letter to the Public Safety Committee that was meeting Monday night.

The committee discussed the possibility of providing an emergency telephone warning system to supplement the emergency warning sirens that are used to warn residents to take steps to stay safe during storms or other emergencies.

Committee Chairman Bob Buehler had asked Bradford to investigate a plan previously considered a few years ago and rejected in favor of the warning sirens. The system would send out telephone calls to warn residents. It would require the village to purchase special equipment and was costly.

"I did some research and found a company offering a similar service," Bradford said. "It is CodeRED (a registered trademark), an emergency communications network that specializes in providing high-speed emergency communication services."

The system is a service of Emergency Communications Network, Inc. (ECN). Bradford said it works via the Internet and can be activated by an authorized person from anywhere there is Internet access. It delivers a recorded message from the initiator by telephone directly to homes, businesses, to connected individuals and answering machines.

He said it is capable of delivering up to 60,000 calls per hour, which would be more than adequate for a village the size of Glen Carbon with approximately 5,000 homes. The company promises, "lightning fast time."

It can deliver pre-recorded messages such as a boil order from the Water Department or it can deliver a new message activated by the authorized person for weather emergencies or evacuation orders due to a hazardous materials spill.

Bradford said no special equipment is required other than the computers the department already has. He said it would provide 18,750 minutes of messaging or 37,500 30-second messages per year for the user fee of $7,500 per year.

"It works kind of like the GIS mapping system," Bradford said. He noted that the messages could be delivered to selected parts of the village or to everyone.

Committee members were favorably impressed, especially with the cost compared to what the previously considered service would have cost.

Buehler said he would like an opportunity to read the sales literature provided by ECN and consider the options at the next committee meeting.

Bradford also told the committee about a company that approached him asking to make a presentation about so-called red-light cameras. The cameras are installed at intersections where motorists have been observed running red lights. Such actions often lead to crashes.

The cameras would record the vehicle and its license plate in the act of running the red light. Buehler said the committee should see the presentation.

"I think we should pursue it as much as possible," he said.

Members looked over an ordinance that would ban hunting in the village of Glen Carbon. Trustee Ron Slemer said he doesn't think the village needs to do anything because all kinds of rules already exist.

"I think we ought to concentrate on enforcing the rules we have," Slemer said. "We should rely on the Illinois Department of Natural Resources' Conservation Police. These people are skilled in handling these problems."

Trustee Margaret Moggio disagreed.

"What I'm saying is we should have an ordinance like this and have it backed up by these other laws," she said.

Buehler moved to send the ordinance to the village board for discussion and Moggio seconded the motion. They voted in favor of it and Slemer voted no. The ordinance will be sent to the board.

I don’t yet have a Starcom capable scanner (hope to remedy that this week)

However I noticed D-11 doing their Shift assignments on 154.665, which I hadn’t heard for some time. I suppose this could have been a rebroadcast or simulcast but just thought I’d mentioned

I also traveled on I-70 through Effingham and noticed D-12 dispatching on their primary 42 Mhz frequency. Again not sure if simulcast .

Just thought these were kind of interesting.

Anyone know of anywhere in the St. Louis/Metro East/Central or Southern IL who has a good deal on the Uniden Scanners?

Happy Holidays/Merry Christmas

Cris Hanna

Belleville, IL

Dist 12, doesn't do their normal dispatching just patrol assignments
and closing or issuing ISPERN's. Keep in mind that alot of local
PD's still have Point to Point "370" as well as ISPERN which is
actually keeping them a few seconds ahead of the ISP units since,
ISPERN on Starcom 21 is delay lol.

I-Call is 866.0125, PL 156.7, in conventional repeater and simplex
modes. It is not a part of the trunked system. It is part of the I-Tac
group of nationwide channels.

See the CARMA Mutual AId Profile at
http://www.carmachicago.com/profiles for more info.

Well, I programmed the I-CALL National frequency into the BCT996T,
and I put it on auto mode.

I am getting what sounds like a data burst now and then like I do on
VCALL now and then on the Starcom 21 system, and the mode is showing
up as P25, so it must be a digital transmission and it must be on a
repeater, given no where close is using anything trunked or in 800mhz.

Cold weather can cause radio frequencys to travel further, Skip I would supose, but having did some searching, my guess is that Big M is not going to control all the frequency use, in all states. Even some of the counties in Illinois are not switching to SC21, they could care less. So this maybe what you are hearing, remember you have a scanner, that can not track and prevent hearing certain frequencys that radios can. I also wonder how long it will be before Motorola sees the $$$$ signs in the private sector and adds them on there systems, remember they own it, and can do what they want. GE-Erricson already does this, its all about money!, oh, forgot, politics too!

2196. Re: [StarCom21] Re: ICALL

Yahoo group: StarCom21
Date: 2007-12-24 00:08:47 UTC
From: Rich Carlson
Topic: 2186 Message: 2196

There is a convergence of terms here.

I-Calls (Individual Calls) are private conversations within a trunked system, assigned numbers by the system, and are between system radios. They are also called Private Calls and a couple other terms. They are set up so that other users of the system do not hear the traffic, but they can be monitored on scanners. I have never heard them on StarCom21 but I don't know if they are allowed or not, that would be set in the system and subscriber fleet programming.

I-Calling is the first of the 5 I-Tac channels used nationwide. It is used as a Calling Channel, users are supposed to be assigned to one of the ITAC tac channels after initial contact. (866.0125 is I-Calling, ITAC1 is 866.5125, ITAC2 is 867.0125, ITAC3 is 867.5125 and ITAC4 is 868.0125)

It is unfortunate that similar terms are used but they are separate items. What the OP heard was a conversation n 866.0125, which is I-Calling. There are repeaters for these channels in several areas around the state.

Yes, I have asked before, and had multiple replies.... but now really need to do it.
Requesting someone to reprogram my HT-1000 Motorola VHF portable.

I need programmed with transmit/receive and scan as I request.

99.99 % use in for monitoring only.

I'll send it to you and pay for the postage back.
I also would like to know what options it has, for scan, etc.

Please let me know.

From: Mike
Topic: 2204 Message: 2204

Heard an ILEAS test on the statwide talkgroup. I heard the guy answering the test state he was about 20 Miles East of the St. Louis arch, believe he said in St. Clair County.

Also heard a few Dist 12 units operating on Dispatch B, which I haven't seen before. I heard one contact the dispatcher on Dispatch A en route to a call then switched over to Dispatch B after arriving on scene.

I heard one try and call in to go on duty or off duty, around 6pm, and he was on Dispatch B, and the Dispatch told him he would need to go to Dispatch A, because there was only one operator on.

Also did find that at times, Dist 12 is simulcasting quite a bit more than they had, I heard it reported on here the other day so I have been trying to monitor it better and sure enough they are, haven't confirmed what channels are being simulcast, maybe the VHF mobile/ old dispatch frequencies, since the plan was to get rid of the 42 mhz freqs.

2205. Zone 4 on Starcomm21

Date: 2007-12-28 02:30:36 UTC
From: scannerfan3155
Topic: 2205 Message: 2205

I was listening to Starcomm21 and just heard a dispatcher do a broadcast Attention Zone 4, all units reckless driver on 90.

According to the Carmachicago.pdf ISP references only three zones. I am very new to understanding how the state is zoned for Starcomm21. So is this a new zone which Carma does not have documented?

My scanning was on the Zone 1 simulcast sites referenced in the Carma database. I believe the talkgroup that popped up was: 9002.

Can anyone shed light on this

Regards,
Mark

Different use of the same terms. Zones in StarCom21 are mainly used
for programming purposes and rarely are they used in this context on
the air.

What you heard most likely were references to Patrol Zones, commonly
used by most ISP Districts. Each ISP District is split into several
Zones which are the assignments used for Troopers. They may be as
small as a segment of a highway or as large as several counties.

-------- Original Message --------

Subject:

[bctool] Beta 55 - Important Information Enclosed!

Hi all,

Here it is, finally Beta 55. There are some very, very major changes in this build, but it has been tested quite a bit off-list by a few of you and the reports back have been so far quite positive. There are still some limitations, but basically bcTool now has the ability to read and write trunked systems to all models. I believe this *should* also include the 246, but it has not yet been tested on this model. Certainly trunk read support now works on the 246.

** IMPORTANT: You really, really should make sure to have backup of your programming if you're going to test out the trunk writing support. Whilst no one has yet lost any trunked programming, you can never be too careful with beta software **

** ALSO IMPORTANT: There will be no online automated update to this build. I'm too concerned that people might blindly update without understanding the limitations below. Just download the release from the files area (seperate mail shortly with a URL!) **

So, changes:
- Support for the 246 has been improved, you can now read in all programming successfully
- Major improvements to trunk read support for 330, 396
- Trunk write support
- Some bug fixes around network support
- A few user interface changes to support trunking
- bcTool now has online help (see below for more info)

Limitations:
- I haven't finished the user interface around trunking yet. Whilst you can make some basic changes, add trunk frequencies/TGIDs etc there are still bits that won't work right. I'm aware of most of these, but if you spot any just shout anyway and I'll make sure I've seen it.
- Things like import/export/search/duplicates don't take trunks into consideration. I will fix this over the next 24 hours.
- At the moment you can't see the motorola bandplan (base, step, offset) when reading trunks from the 396. Rest assured, it is correctly being read and if you write the system back to your scanner it will be programmed correctly. bcTool just doesn't display it at the moment. If you have a base scanner (BCT15/996) it should appear,

though there are some formatting issues so I don't recommend changing any of it just yet.

The bcTool Online Help - you can get this from the Help menu. Yes, it's very limited, but I have to start somewhere. If you've any ideas for additional sections or spot any errors, any omissions or problems please let me know. If you fancy writing a few pages up please let me know. I have more screenshots to annotate and add here and will spend some time tomorrow writing more. I hope the help grows and becomes useful for all - the software I just bought to generate it was not cheap so it better come in handy (retrospective donations always appreciated!).

So, to keep you all up to speed, I will be spending tomorrow an Saturday tidying up the trunked user interface and fixing the limitations mentioned above, and any other bugs reported, and then I think we're almost ready for a first release... finally! I can only apologise that trunks have taken this long to get sorted - I don't think I fully appreciated how much they are used in the US until recently - if only we had more than a couple here in the UK I'd probably have done it a lot sooner!

Cheers!

rob.

From:

rob

Reply-To:

bctool@yahoogroups.com

To:

bctool@yahoogroups.com

Hi,

If you're using Beta 56 please upgrade to Beta 56a, now available in the files area. There is a serious bug in B56 which prevents bcTool from correctly handing the motorola bandplan (base/offset/channel on MOT systems) which means this will not be correctly saved or written to the scanner, resulting in your scanner not being able to receive anything on that system.

This bug is resolved in B56a.

My apologies - sorry if this has caused you any hassle and thanks to Dave for spotting it so quickly.

Cheers!

rob.

No it will not work. Sorry. You will need something along the lines
of the BCT 996T

Something that can listen to APCO 25 systems.

It was more likely 154.665 ducting from South Carolina.

AFAIK StarCom21 is not set up to simulcast any lowband at all, if they
did it was only for testing purposes.

"Local" patches on StarCom21 are usually the old HF2 channels for each district.

2236. ISP patrol zones within districts

Yahoo group: StarCom21
Date: 2008-01-13 15:15:57 UTC
From: James
Topic: 2236 Message: 2236

I am hoping I can get some information. The information I am requesting is the patrol areas within each district such as the following or to your best of knowledge:

District 09
Patrol 1 Christian County
Patrol 2 East of I-55 Sangamon County
Patrol 3 West of I-55 Sangamon County
Patrol 4 Logan County
Patrol 5 Mason County
Patrol 6 Menard County
Patrol 7 Cass County
Patrol 8 Morgan County

District 18
East Patrol
Macoupin
Montgomery
West Patrol
Calhoun
Greene
Jersey

I think District 08 may be divided East and West with the river as the dividing point. I think District 10 maybe divided up into zones then into patrol areas. This is the type of information I am searching for atleast for my own personal knowledge. Also if certain patrol zones within the district use talkgroup A, B, or C such as District 11 use certain counties A and other B. If you don't want to reply on this group please reply to my yahoo account jburgess1974@... Thanks.

Calling all cars: Sheriff gets high-tech radios, dispatch system

By STEPHANIE KISZCZAK

The Telegraph

January 13, 2008 - 10:50PM

Cynthia Tweedy, foreground, a 911 telecommunications operator with the Madison County Sheriff's Department, and Shana Neal work with the department's new computer-aided dispatcher system.
The Telegraph/MARGIE M. BARNES

EDWARDSVILLE — A $3.8 million technological upgrade has launched the Madison County Sheriff's Department into the 21st century.

A $2.2 million radio system and $1.6 million computer-aided dispatch system have been installed at the Sheriff's Department in the last year.

Some of the $17.6 million the county inherited from the Phillip Morris cigarette case paid for the new technology. The County Board approved the two sums, which were figured into the 2006 budget. Equipment was purchased in 2007.

The department adopted StarComm 21, a statewide system operated by Motorola, and replaced all departmental radios. The StarComm 21 system utilizes seven towers in and around Madison County. The previous system only had one tower.

"It's really almost like an expanded cellular technology," said Capt. Eric Decker, commander of administrative services for the Sheriff's Department.

More than 200 new radios were purchased for officers and vehicles, replacing some that were 30 years old or older. Some 95 radios were installed in squad cars. Construction for this system started in 2006, and the new radios went live last April.

The Animal Control Department also got new radios, Decker said. The Madison County Coroner's Office also will adopt the new system.

"Hopefully, we'll be up and running by Feb. 1," Coroner Steve Nonn said. "That's our goal."

Approximately $29,000 has been set aside to purchase new equipment.

Roger D. Smith, chief investigator for the Coroner's Office, said a new radio system would enhance the office's performance. Deputies make calls from hospitals and basements, underneath power lines and near refineries — which makes finding a frequency difficult. He and Nonn tested the radio system, which Smith said is "head and shoulders above what we currently have."

Police departments throughout the county can purchase equipment and join the system, Decker said.

“We’ve had various agencies that have expressed interest,” he said.

The Illinois State Police also use StarComm 21.

A computer-aided dispatch system also enhanced the department’s efficiency.

A room formerly used for news conferences has been transformed into a 911 control center. At least three people staff the office at all times, usually two telecommunicators and a watch commander. Computer screens, which telecommunicators use to track police cars and communicate with officers, surround the desks. Two large screens on the wall provide maps, showing the location of departmental vehicles. The CAD system went live shortly after the radio system.

The room is powered by its own generator and has a power supply independent from the rest of the building, Decker said.

“They will not lose power or function,” he said.

The former 911 control room now serves as an office for uniformed officers to complete reports. But new technology has eliminated most of the paperwork.

Before the updated radio and CAD systems were introduced, an officer would go to a house, listen to a complaint, get in the car, drive to a substation and type up the report. The report then would be printed, put in a mail folder and later taken to the department. It would sometimes take two to three weeks for the reports to be edited. Now, each police car has a mobile data computer, which an officer uses to type and send reports electronically.

“The advantage of it is a detective could potentially get assigned something just as quick as a deputy uploads it,” said Capt. Brad Wells, chief of detectives.

Previously, assigning a detective to a case took days, said Wells, who reads every police report that goes through the department.

“I can actually assign those cases to the detective without exchanging a piece of paper at all,” he said.

When printed, the reports are professional in appearance — with no eraser marks or smudges — and they are immediate. The department’s databases, once housed separately, since have been combined into one system.

“It’s really and truly a transition period,” Decker said. “Functionality-wise, it’s a huge step in the right direction for the department.”

There were signs at Dist 11 HQ parking lot exits instructing Troopers to turn on repeaters. So, I'm fairly certain they are on all the time.

I've heard from sources they are probably in the 764.xx range.....

And considering they are in the 700 MHz band, I'd assume the input would be +30 MHz.

Also, considering that other sign was old..... even in the last 15 years, mobile extenders were usually only turned on at the scene of an accident or traffic stop.

Terry

While it seems to be a great deal from seeing the items on Ebay, you
may want to see what the Warrenty is !!!!!
Refurbished (Same as New) may not have a warrenty, so, just trying to
help those that are paying far to much for used, non warrenty scanners.

2245. IL DNR

Yahoo group: StarCom21
Date: 2008-01-16 03:17:23 UTC
From: Richard Blough
Topic: 2245 Message: 2245

Is anyone getting IL DNR traffic on starcom21 system in Central Illinois? I've d/l what I could find for DNR Dist 4 from radio ref. but am not hearing anything. Also have kept the high band freqs. I used to hear DNR on, but they are silent too. One of the main reasons I moved to the PSR 600 was for DNR. I am no longer able to hunt in cold weather but used to enjoy the scanner chatter during deer seasons. FWIW I am located west of Spfld and so far only have the back of set antenna. ISP Dist 9 has a strong signal though. Even though I have had scanners since before they scanned, (tunable) it has taken me a while to get on to this scanner and starcom21!

Thanks,
R.B.

2246. Knox County going SC21

Yahoo group: StarCom21
Date: 2008-01-16 05:12:56 UTC
From: N2DUP@aol.com
Topic: 2246 Message: 2246

From a story on the Knox County Board meeting the other day ...

- Knox County will receive a little less than half of what it requested in a state grant proposal to upgrade emergency responders radio systems. Knox was part of a five-county consortium that applied for a grant of more than $2 million to be split among the counties to be used to buy StarCom radios. Sheriff Dave Clague said the county heard back in December and will receive $421,000 of the $850,000 it requested.
The radio system will allow all local police departments, first responders, ambulance services, schools and fire departments to communicate in cases of a major emergency, not just with each other within the county or surrounding areas, but across the state. The state is requiring all agencies to have at least one radio that can achieve interdepartmental communication.

FYI, Knox County has been heard testing SC21 radios in the past on the usual TG20.

Greetings Terry,
Way to go. Close Call on the bcd-396t is so under-rated.
Its a great feature ; if the bcd-396t/bcd-996t is configured correctly Some have been harsh on that feature, but its because they do not have the correct options turned either ON or OFF.

And the info you gave seems to agree with the FCC data too.
ISP does have a blanket license for that frequency for the state, and others in the same segment. Its seperate from the 774/775 segment.

2254. FCC: Sharing Public Safety 700 and 800 MHz Channels with Utilities

Yahoo group: StarCom21
Date: 2008-01-19 16:49:33 UTC
From: dcserkits
Topic: 2254 Message: 2254

From the COmmission, 1-18-2008
Sharing Public Safety 700 and 800 MHz Channels with Utilities

The FCC has ruled on a filing by the State of Illinois (Illinois) seeking a waiver1 of Section 90.179(a) of the Commission's rules to permit it to share use of its 700 MHz and 800 MHz public safety channels with AmerenIP, AmerenCIPS and AmerenCILCO (collectively Ameren), an electric and gas utility service provider in Illinois. The subject frequencies are part of Illinois's statewide public safety communications network called STARCOM21. Based on the record, we grant the request in part with respect to Illinois's 800 MHz public safety channels, and deny the request in part with respect to the 700 MHz public safety channels.

The FCC document will be posted in the "files" section.

From: Anthony
Topic: 2256 Message: 2256

DECATUR, IL - The Macon County Emergency Telephone System Board will meet in February solely to discuss plans for switching all emergency communication within the county to digital radios and the cost of paying the subscriber fees to do so.

Those fees are estimated at $300,000 a year and are paid to the Illinois State Police, which operates the digital radio system.

No date for the February meeting was announced Wednesday.

Have spent most of the weekend learning PSREdit… these units do require a bit of different thinking.

But its sitting here on my computer desk on the East side of Belleville with just the telescoping antenna and I'm impressed so far.

What really strikes me odd so far is that I've got District 13 (Duquoin) as they cover Mt Vernon where I regularly travel through and I was picking up Dispatch and mobile units, making traffic stops in downtown Duquoin.

This unit will replace my Radio Shack 2055, which I've been very happy with but obviously it won't do P25 I may have to consider a mount that will allow me to have both running in the car…as long as one doesn't cause the other issues.

The real test will come Wed when I drive into St. Louis

Cris that is what we have been saying lol

These towers work well, when they work, for the most part.

I am inside the middle of Dist 12, and I can get Dist 13, off the Wayne County Tower I think

I get Dist 10 which is about 50-60 miles NE of here, off the Jasper County Tower, I get Dist 12/ 19 off the Clay County But I can get Dist 12 off of the Jasper/ Clay/ and Wayne Co Towers. I am unable to get signal off the Effingham Richland or Fayette County Towers with the stock antenna from the BCT-996T

I have been hearing some talk which has been on car to car and dispatch patching through on VCALL I think ..... Wierd I brought it up a few weeks ago, but it is like it is simulcasting..... maybe that is a car repeater freq? who knows

From: Cris Hanna
Topic: 2260 Message: 2264

Its hard for me to say, because I don’t own the 996

The big difference between the two, based on conversations in this and other forums that I’m subscribed to is the sensitivity of the receiver.

Even the folks at the store (The Ham Station in Evansville, IN) will admit that the PSR 600 is subject to issues if you are in a very metro area like St. Louis (as I am but I live on the IL side of the river)

Any freqs in the upper 800 range (860 and above seem to be affected. General consensus is this is Nextel and older cell stuff

As for programming, it is certainly different from our old scanners. Took my about an hour to figure out how and where to put stuff.

Programing, it is possible that some may not be aware that software can be purchased to do this. As the post just seemed that they where trying to do it via the scanner keypad. Just a thought.

RadioReference.com Newsletter - 01/18/2008

(http://www.radioreference.com)
www.radioreference.com (http://www.radioreference.com) News and Updates - January 2008
Dear RadioReference.com Member,

I'd like to take a moment and wish each and every one of you a Happy New Year. 2007 brought an enourmous amount of changes to the RadioReference.com community, the most important being the 3.0 release of the database and the site. All of the contributions, feedback, suggestions, and participation in the beta process resulted in a wildly successful release and even more ideas to bring forth in 2008. Below is a summary of all the changes that occured, and what is upcomming for 2008.

RadioReference.com 3.0 Release Information
Many new features were released as part of the 3.0 release (http://www.radioreference.com/apps/db/) rolled out in early December 2007. The following lists some of the more popular and important changes:

- An entire rewrite of the portal software was completed, providing much more flexibility in the way that radio communications and news content is delivered. This included a completely new set of graphics and the winning logo from the logo design contest held last year.

- New Mapping software was integrated into the RadioReference database for complete clickable map functionality across the entire database. County Level data maps (clickable) were made available for all United State counties. In addition, worldwide mapping will be made available, with state mapping for most countries.

- The ability to tag frequencies and talkgroups with service tags was made available. Some examples of how this data will be used in the future include: Queries of individual service uses within a specific area (i.e. display all fire dispatch frequencies and talkgroups in a specific County) and the ability to program a scanner with all police dispatch channels in a specific area.

- Location based attributes are available for frequencies and talkgroup subcategories, and trunked system sites -- primarly to support GPS capabilities in some of the newer scanner models.

- Information search by US ZIP code was released.

- CSV comma delimited file downloads are now available for trunked system talkgroups, sites, and frequencies.

- Premium subscribers can now add individuals agencies pages to their watch lists.

New Mapping Software

Location Attributes

Premium Subscription Information

RadioReference.com provides premium services to members through a subscription model. There are a number of value added features available including data downloads, "MyRR" personalization and watch lists, and printable PDF formats that are valuable services to radio communications enthusiasts.

Please note that general access to the RadioReference.com Database, the Forums, and the Wiki, will always remain free. This policy will never, ever change.

For more information on the complete listing of premium services are provided, please see the RadioReference Premium Subscription Information Page (http://www.radioreference.com/apps/subscription/).

MyRR Watch Lists for Premium Users

Web Service Database Integration

One of the most valuable features of being a premium subscriber is access to the RadioReference.com Web Service. The Web service is a data integration platform that allows software developers to write applications that can directly access the RadioReference database.

Most of the popular scanner programming packages available today provide the functionality to program your scanner directly from the RadioReference.com Database. See the Web service page (http://wiki.radioreference.com/index.php/RadioReference.com_Web_Service) for a complete listing of software applications that support the Web service.

Wiki News

The RadioReference.com Wiki (http://wiki.radioreference.com) has become one of the defacto standard sources of information for the radio communications hobby. Equipment information, programming FAQs, static frequency information, and other reference sources have made this a wonderful resource for everyone. Best of all, any RadioReference.com subscriber can add and edit information on the wiki, allowing for a true user supported and managed information platform.

Mike Agner and Ben Carlton have both spent an incredible amount of time working to keep the Wiki updated and managed. From both of them comes updates and changes to the wiki were recently rolled out, and they are summarized as follows:

- The complete redesign of the front article to making finding information easier.

- The massive cleanup of unused and orphaned files and other items.

- The reorganization of the wiki by using categories and user-defined.

- New articles involving such diverse topics as gathering all the articles relating to DMA under a single category, along with the beginnings of a new DMA FAQ

- A guide for creating new articles was added

- All new GRE radio articles for the new GRE Scanners

- A massive increase in the sports related category for those sports scanning fans

(http://wiki.radioreference.comRadio)
RadioReference Wiki

Coming for 2008

We have so much in the works for 2008, including:

- Major updates to the RadioReference.com Web service to provide software developers even more capabilities to integrate their applications into the RadioReference platform.

- User forums upgrades for better user experiences in the user forums.

- More advanced reporting capabilities for advanced users, including multi-state searches and query building functions.

- A CDROM of all RadioReference.com Data will be made available for sale - coming Spring 2008!
Administrators

Hats off to the database administration team for their outstanding efforts in processing submissions, and as equally important, many thanks to all the contributors of detailed frequency information to the site. The administration staff has grown to over 80 individuals all over the world who are recognized experts in their local areas, and volunteer their time to manage the number of submissions that are received from contributors. They are the lifeblood of this site, and work extremely hard to keep the data in the database up-to-ate and consistent.

If you are interested in contributing data and helping us keep the database updated with the latest information, please use the submission engine (http://www.radioreference.com/apps/submit/) to send information directly to the database administrators. Don't sit on that information, share with your fellow hobbyists!

Partnership with ScannerMaster.com (http://www.scannermaster.com/?Click=20907) (http://www.scannermaster.com/?Click=20907)

RadioReference.com continues in 2008 to cement our relationship with ScannerMaster.com (http://www.scannermaster.com/?Click=20907) - so expect to see some big news and items this year in our partnership. Scanner Master is the nation's leading developer of communications guides and custom police scanner hardware and software solutions. They specialize in developing radio monitoring technologies for the scanner industry, and we are extremely excited to partner with them as a fantastic distributor of quality scanner and radio communications equipment. Remember, RadioReference.com recommends ScannerMaster.com (http://www.scannermaster.com/?Click=20907), and buying from ScannerMaster.com (http://www.scannermaster.com/?Click=20907) helps to support this site.

You received this newsletter as a registered member of RadioReference.com. citrus801 <citrus801@...>

2271. Re: New file uploaded to StarCom21

Yahoo group: StarCom21
Date: 2008-01-22 18:25:30 UTC
From: citrus801
Topic: 1014 Message: 2271

I posted a simple Access database I threw together to query the GrantLog's that Pro96com produces. I made queries to search by talkgroup, search by radio id, show unique unencrypted talkgroups, and show unique encrypted talkgroups (which shows a count of how many times the talkgroups were recorded in the GrantLog).

I made this database in Access 2007 but then saved it out as Access2000 so people could use it in earlier versions of the software. There's no data in the file--just the database structure.

I've been appending my most recent grant log to the GrantLogTable and then changing the name of the GrantLog csv file on my computer so the next time I open Pro96com, a new GrantLog csv file will be creating and I'll append that one into Access next time to avoid getting duplicates.

2272. Re: bctool programming software for Bearcat Scanners

Yahoo group: StarCom21
Date: 2008-01-22 17:06:49 UTC
From: Larry and Natalie
Topic: 2141 Message: 2272

I would love to be able to just plug it in to the software and let it program it for me. I probably need someone to walk me thru step by step because this manual is not the clearest thing in the world. I tried close call scanning on the way to Chicago last time and seemed to be just picking up radio or tv stations. I know I am doind everything wrong somehow.

2273. SOS Police on SC21 TG4079

2279. StarCom21 TG9137, TG9139, and TG2048

Yahoo group: StarCom21
Date: 2008-01-26 22:17:41 UTC
From: exolalde
Topic: 2279 Message: 2279

I left my BCD396T on for a couple of days with the log running on the UASD software and came up with 3 talk groups that I could not find in the RR dbase: TG 9137, 9139, and 2048. I live in Will County and was wondering if anyone has any info on these TGs.

2280. Re: [StarCom21] StarCom21 TG9137, TG9139, and TG2048

Yahoo group: StarCom21
Date: 2008-01-26 23:23:10 UTC
From: Rich Carlson
Topic: 2279 Message: 2280

I have logged 9137 and 9139 on other Chicago area sites, 2048 is new
to me. 2048 is likely a Tollway group while 9137 and 9139 are likely
ISP.

From: Gregg Sperling KB9DBC
Topic: 2279 Message: 2281

I would highly suggest checking out the CARMA StarCom21 guide. Although the TGs you inquire about are not in it, the guide is still very helpful and a "bible" of sorts to me while I am monitoring SC21.

http://www.carmachicago.com/profiles/StarCom21.pdf

In checking the profile, I find TGs 2038 and 2135, both of which have been identified as IL Toll Highway Authority. Its possibly safe to assume 2048 would be of similar use.

Cheers!
Gregg/KB9DBC

Date: 2008-01-27 11:42:58 UTC
From: n9jig
Topic: 1977 Message: 2282

The next CARMA Friday Nighter will be on Friday, February 1, 2008 at
the O'Hare Tollway Oasis above I-294. We will meet in the far NW corner.

We will start at 7:00 PM but many of us get there earlier.

Any suggestions for a topic are welcome!

2283. Effingham County to join StarCom21

Yahoo group: StarCom21
Date: 2008-01-28 00:49:55 UTC
From: Terry Weatherford
Topic: 2283 Message: 2283

Effingham Communication Equipment (Watch Online)

video: http://www.weiu.net/index.php?option=com_content&task=view&id=576&Itemid=165

They say talk doesn't come cheap, and in Effingham it comes with a price tag of nearly $150,000.

The sheriff's department is planning a major upgrade to their radio communication system.

The department received a grant from the state which will help pay for a system with digital access to help the department hear all local radio calls.

Effingham County Sheriff John Monnet says his department needed a more reliable way of communicating with other law enforcement agencies.

Monnet says the sheriff's department is hoping to have the radio system up and running by March.

2284. Another St Clair County Question

Yahoo group: StarCom21
Date: 2008-01-29 13:59:58 UTC
From: Cris Hanna
Topic: 2284 Message: 2284

Think I have the scanner programming thing solved but need some confirmation

Does anyone know if St Clair County Sheriff is actually using Starcom as their primary OR still using VHF 154.74 and simulcasting on Starcom? And if it’s the latter, does simulcast always occur

Had my PSR600 (which is getting excellent reception for ISP and Fairview Heights) locked to nothing but St Clair County Starcom talkgroups and had my OLD radioshack handheld scanner monitoring just 154.74

Traffic on 154.74 continued all night long and “occasionally” heard the same traffic on Starcom21 but seemed to drop off altogether after midnight. Is VHF still the primary radio?

Thanks everyone

I'm trying to get this info correct so correct/supplement this list with corrections and updates.

County sheriff departments using Starcom21 right now...
*McLean County
*St Clair County
*Madison County
*Boone County

Can anyone confirm whether the following counties' sheriff's departments are currently using Starcom21 for dispatch or are using their old systems and just tested on Starcom21?
*Lee County
*Ogle County

Likely will go to Starcom21:
*Knox County
*Effingham County
*Henry County
*Macon County

My finds while in Fairview Heights yesterday..

Heard multiple ops on VHF, that (after pressing scan) DID NOT hear on SC21.

Most of the traffic I heard on Law Rural 2 & 3 were simulcast/patched.

Still, though, very odd....

Not sure WHO would be on the VHF ONLY when ALL AGENCIES are supposed to
be on SC21.

POSSIBILITY: may be that the simulcast sites (depending where you are)
are cutting each other out and you JUST DON'T PICK THEM UP because of
the interference.

Not sure...

Terry

2290. RE: [StarCom21] What County Sheriff's Dept's are on Starcom21 right now?

Yahoo group: StarCom21
Date: 2008-01-30 04:07:29 UTC
From: Cris Hanna
Topic: 2285 Message: 2290

Hi Terry,

I live on the East Side of Belleville, just off Greenmout Rd near SWIC

Have actually been working with a tech support guy from GRE (have the PSR 600) whose helped me revise my programming, but its still some hit and miss

Was out tonight headed near your neck of the woods and things seemed improved with the revised program

Going to put the PSR 600 and my handheld on the VHF freqs and listen to see if I'm catching most of it now

From: StarCom21@yahoogroups.com [mailto:StarCom21@yahoogroups.com] On Behalf Of Terry Weatherford
Sent: Tuesday, January 29, 2008 8:00 PM
To: StarCom21@yahoogroups.com
Subject: Re: [StarCom21] What County Sheriff's Dept's are on Starcom21 right now?

My finds while in Fairview Heights yesterday..

Heard multiple ops on VHF, that (after pressing scan) DID NOT hear on SC21.

Most of the traffic I heard on Law Rural 2 & 3 were simulcast/patched.

Still, though, very odd....

Not sure WHO would be on the VHF ONLY when ALL AGENCIES are supposed to be on SC21.

POSSIBILITY: may be that the simulcast sites (depending where you are) are cutting each other out and you JUST DON'T PICK THEM UP because of the interference.

Not sure...

Terry

Cris Hanna wrote:

Per my previous post today…it appears that St. Clair County is still heavily using their old VHF system

I get limited traffic on starcom from St. Clair county and what I do get is also on VHF

Henry Co Sheriff Office is using Starcom, the villages are still on 154.725

I hear Lee County on 154.785 more than on starcom.

I have been hearing dispatching, rollcalls, car to car, 28s, 29s, 41s, 42s. Basically everything. But this only involves the Sheriff Department. They may simuclast dispatches so the villages can hear. I have not compared starcom and 154.725 to see what is different or the same.

I would like to Welcome all new members to the group.

We are nearly 600 members strong! Thanks very much.

I just want to remind every one that this group is only for StarCom21 Scanning questions & information..... and we welcome members from boardering states too.

BE ADVISED, I do send out "Public Safety / Illinois Government " related news articles. I try to keep these to a limit, but some times there is a lot of information that I feel worthy of getting out there.

I also am that way with the BCD996T, there is no way I would use it for full time VHF/UHF analog scanner, it lacks, I can pick up alot better with my 898T, I guess you have to give somewhere lol, you want a good Digital scanner you lose the ability to receive distant analog signals.

2302. Letter to FCC

Yahoo group: StarCom21
Date: 2008-02-03 17:28:09 UTC
From: N2DUP@aol.com
Topic: 2302 Message: 2302

The following letter was found on an STA request to the FCC for Starcom21 systems:

Jeff Sexton
Illinois State Police

Springfield, Illinois 62702
(217) 782-7347

January 3, 2008
Federal Communications Commission
1270 Fairfield Road
Gettysburg, Pennsylvania 17325
Dear Sirs:
The state of Illinois is currently involved in implementation and final acceptance testing of the
statewide communications system known as StarCom21. This system is a trunked, primarily 800
MHz, radio system which utilizes pre-rebanding NPSPAC channels at approximately 182 sites
throughout the state. Of these 182 sites, approximately 27 are operating under Special
Temporary Authorizations from the FCC.
These STAs continue to be necessary because the state is no longer eligible for regular
authorizations on the pre-rebanding NPSPAC channels. We are working diligently on our
rebanding effort, but we're many months away from actually moving to the new channels. For
these reasons, the state of Illinois is requesting the renewal of the following STAs:
WQGI545, WQGC814, WQGI693, WQGI692, WQGI689, WQGI815, WQGI818, WQGI819, WQGI701, WQGI700, WQGI699, WQGI698, WQGI694, WQGJ390, WQGJ383, WQGJ386, WQGJ389, WQHK853, WQFU332, WQFU335, WQFU336, WQFU333, WQFU334, WQFU337, WQFU338, WQGN908
Respectfully,
Jeffrey E. Sexton

2303. Re: [StarCom21] Re: Digest Number 815

Yahoo group: StarCom21
Date: 2008-02-03 18:27:29 UTC
From: Brian
Topic: 2299 Message: 2303

I own the GRE PSR500, GRE/radio Shack Pro92 classic model, Uniden 396, 330, and 250. The GRE500 rocks on sensitivity in the VHF/UHF range....especially with good antennas (rubber ducks). I can't speak for those who may use outdoor antennas. The Pro92 and Uniden 250 are the next best in those UHF/VHF ranges in my personal experience. The Uniden 330 actually is also more sensitive in those areas too compared to the 396. Nothing scientific. Just side by side monitoring.

Also, when Starcom was first being tested, I removed the stock SMA to put on the Radio Shack 800 duckie and I was near the tower site at I88 and I355 by the District 15 ISP Headquarters (site101) and I had 5 bars within a mile of that site. And, I was receiving transmissions like I had the best of antennas on it. Now that I think of it, I have not tried that with the GRE500 but will on my way to work tomorrow afternoon.

I want to also stress that the 396 an 500 sometimes miss a TG that the other will pick up for some reason. Neither is 100% perfect at all times. But, for Starcom, both are great receivers.

I also am that way with the BCD996T, there is no way I would use it
for full time VHF/UHF analog scanner, it lacks, I can pick up alot
better with my 898T, I guess you have to give somewhere lol, you want
a good Digital scanner you lose the ability to receive distant analog
signals.

Interesting enough, my GRE 600 and RS 2055 are almost identical in size and appearance. Of course we know RS never made their own stuff (or hasn't for a very long time anyway)

So with that in mind and the probable need to keep the 2055 in the car too, anyone seen any good mounts that would allow you to 'stack em'??

First determine which you want on the top, then reverse the bottom mount and fasten together, then are you going to mount this setup from the top or the bottom, purchase an extra mount for that scanner.

2310. New Starcom21 Talkgroup-2020-likely IL Tollway Authority

Yahoo group: StarCom21
Date: 2008-02-08 19:10:16 UTC
From: Bobby Ray Ransom
Topic: 2310 Message: 2310

About 12:35pm. 800 series units (825, 813)coordinating right arrows and switching over to main channel to call something in. Later a tollway maint or HELP vehicle said the FD could contact them to get to the 1050 while on TG 2002. They'd be on the contractor channel. Sounded like Lisle/Woodridge was the responding agency. I know Argonne uses 800 number too but this was definitely NOT Argonne related or Argonne at all. Anyone else catch this TG?

I was catching them on tower site 101-DuPage.

The Carma profile on Starcom 21 lists TG 2020 as Maintenance Garage M8
(Naperville). This fits into the "garage"group as I have heard TG 2015 (M3 garage
in Park Ridge) and TG 2015 (M5 garage in Arlington Heights).

Talkgroup 16465 has been seen several times on Lake site # 108. Typically, I have heard one side of a conversation, with the responses being given encrypted.

Today, I heard "DuPage County from .....", then a response in encrypted mode, then more radio traffic from this unit.

I'm not sure what type of TG this is used for, but we can at least list this TG as "DuPage County" something!

Well, when these guys were talking they weren't at a garage. They
werre making sure all the units had their right arrows and lights
going before they did something and one of the units called in an
accident at 53 and 88. Maybe pothole patching?... They were
definitely on the road. Maybe those units operate out of that
garage?.....

Bobby Ray and all,

TG 2020 mystery solved! AFAIK, 2020 is the TG assigned to the "M8" tollway maintenance garage along I-88 at Naperville Road. The 800-series units you heard were likely trucks assigned to that garage. Back on 7/1/07, Bobby Ray posted a message (message 35327) to the CARMA Yahoogroup detailing traffic he had monitored between two ITHA radio techs related to TG names, etc. - in the first block he lists are truck-to-truck / truck-to-garage type TGs for the various maintenance garages (channels 2-12) - by listening to traffic on these TGs, I'm fairly certain that these are talkgroups 2013 thru 2023. They are listed on page 14 of the current SC21 profile http://www.carmachicago.com/profiles/StarCom21.pdf but need to be included in the "District 15" section at the bottom of page 13.

Now to determine what this "contractor channel" is! I don't listen to the regular ITHA maintenance channels too often, but I believe that towing outfits that are authorized to service vehicles on the tollway system contact "Oak Brook" (ITHA dispatcher) to advise their status in relations to vehicles they're servicing on the tollway. I thought that they use the regular maintenance channels to do this, but I could be wrong. Can someone confirm this? Would these towing companies be the "contractors" that the maintenance unit was referring to, or would these be contractors working on roadway projects? I know that local PD and FD units can contact D15 troopers on IREACH to coordinate with them when responding to incidents on the tollway, and it has previously been reported that either TG 2037 or 2038 is D15's patch to IREACH. Does anyone have more information about this "contractor channel"?

Kevin

Topic: 2314 Message: 2319

This TG is used by the IMERT group http://www.imert.org/ - DuPage OEM provides dispatch services for them on this TG. Before traffic from these units was (mostly) encrypted, it was rather routine and primarily consisted of units advising that they were on the air and enroute to (or had arrived at) a particular destination. In addition, DCOEM performs routine status checks of units that are "on the air". IMHO, nothing worth encrypting or even listening to unless they're deploying to a mass casualty incident (MCI)....and I'm guessing that doesn't happen all that often.

In addition to TG 16465, TG 16466 has been previously reported as the "IMERT Command" TG. Does anyone know what other frequencies, if any, this group uses when training or deployed? Use of "portable radios" is listed in their training protocals, which were created before SC21 came along.

Has anyone interested thought about calling the
Tollway Authority and asking about these issues?
Perhaps they even have some orginizational charts in
graphics that would enlighten?

Subject: Re: [StarCom21] East Dubuque Area

It all depends on what radios are affiliated to the towers you monitor. From your location you should be able to hear towers 138, 139 and 141. You might be able to hear 137, 119, 121 and maybe a few others.

With that range you should normally be able to hear most of the District 1 and 16 talkgroups but you may hear different areas if radios on the other talkgroups are affiliated with the tower(s) you are listening too. Conversely, if there are no cars affiliated with the local tower then you might not even hear local traffic.

A few calls can persuade you the world is made up of a**es. For an alternative way. and you made need to do a bunch of searching. Most governmental agencies have to post information concerning its activities for public access. The question is to find where it. For example, Commonwealth Edison keeps/kept a reference kiosk at the Moline Public Library for its Quad City Nuclear Power Station in Cordova. There was hard copies of all it submittals to the US Nuclear Regulatory Commission. However since 9/11 a lot of infrastructure details have been removed from public view or access. Anyway try to find if the Illinois Toll Highway Authority keeps a public reference site like that at a library near the Headquarters.

It's been my experience that the ISPERN talkgroups are generally rebroadcasting whatever they can pick up from 155.4750. If the receiver for the D15 ISPERN patch was picking up the D Chicago broadcast, then you'd hear it. I know around here when D17 lights up the ISPERN VHF channel, the D1 and D5 (at least) ISPERN patches pick it up (and vice versa).

MCI - Shooting at NIU Dekalb Campus
1 Shooter - DOA self inflicted

Kishwaukee hospital
18 victims were transported to Kishwaukee Community Hospital in DeKalb:

Eight victims are in stable condition
Six victims are in good condition
Four victims are in critical condition and two of those victims were transported to regional hospitals

Other 2 were to OSF StAnthony Rockford, and Rockford Memorial
Although I thought I heard 2 choppers at OSF so perhaps some bypassed Kish altogether.

Most corrections identifiers will be K-x or K-xx, K-xxx..... Unless of course it is a car to car channel and then they might just chit chat by name. If calling an institution or an actual institution they will use K plus a number to identify themselves. Example...K3-1 is the warden of Stateville. K3-2 would be warden of operations, etc. Parole agents used to come up rarely on the old ISP District Chicago EDACS system. Never any transports or institutions that I was aware of. Edwardsville?.... Institutions down that way would be Vienna, Shawnee and Menard. That first Kx- will tell you what their institution or parole field office is.

Forget Radio Shack. For the same price as something from Radio Shack you can go to scannersunlimited.com or scannermaster.com and get the BIG brother of the Pro96.....the GRE PSR500 HH or 600 base/mobile. over 30,000 convetional or trunked talkgroups...called objects. Look at the wiki section of www.radioreference.com to see all the features. It does the Starcom21 great. It also has multi-site features that are adjustable when you are in the middle of various tower sites or travel to different areas. Right now, to my knowledge, only the Uniden 396 and 996 or the GRE 500 or 600 will trunktrack the 700/800MHZ P25 systems. I own the 396 and the GRE500. For $499.00 the GRE blows the 396 away on Starcom21. Rat Shack can't top those two vendors. They have 800 numbers if you don't feel comfortable ordering online. Both vendors are fantastic to deal with. Just MY OWN personal experience. Why buy a scanner that only trunks 800MHZ and has 1000 channels in 10 banks from Radio Shack?.... Makes no snese at all to me.

From: N2DUP@aol.com
Topic: 2342 Message: 2342

I've been struggling to program my PSR-500, and after trying all three software programs, finally figured out doing it best with PSR_edit. I've been a fan of Win96 for my Pro-96/2096.

In any event, I'm not sure I did this the best way, but it seems to be working. I travel all around western Illinois and monitor SC21 towers from the Quad Cities south to Hancock County and the Mississippi River to Peoria.

I programmed in the control channels of all the towers I am interested in and filled up 32 spaces in one SC21 TSYS on the PSR-500. It seemed to move from tower to tower OK this morning as I traveled to work ... the Joy tower to Monmouth to Ellisville to Macomb.

Is it OK to put all the control channels in one TSYS? One down side is I really don't always know what tower I am hearing now. On my Pro-96, each tower was labeled as such and I knew what tower was coming up as I traveled along and all the talkgroups were in the same bank.

Is it more effective to program in up to two dozen separate TSYS and copy the talkgroups from one to the other (that will eat up some memory)? Of course, if I did that, I could label each TSYS and know which SC21 tower I was hearing.

I'm interested in how others are monitoring SC21 with the new GRE PSR-500 and 600 scanners.

Chuck and the group,

I have control channels for at 6 sites in my 500 and I am in Chicago area. I played with my configuratgions in expert settings and have multi-site on stat or roam most of the time and I pick up everything here flawlessly. 1 sys. I have it set so when there is communication I can see what number in order the CC i and i know what tower site I am picking up. Mine works great. PSREdit was good. I settled on Win500 for the purchase though. I get the Chicago/Cook sites, DuPage, Grundy, Will and Kane very well. If this BEAST has groups like the 396 I'd say it was the perfect scanner. It's damn near perfect, And in this case, referring to the 500 as a BEAST is a good thing, not a bad thing. Just one mans experience over here.

Topic: 2344 Message: 2344

Since around September, District-Chicago has been using this system and from my observations, has been working. I know downstate, Districts have been using the system for a couple years now. Like many new radio systems, the bugs have been exposed. Does anyone think they'd dump this system despite us complaining? Accidents are being dispatched, traffic stops being made and the job is getting done. Some reports of VHF use have been reported, but none appear to being used my way. I have reported issues with Site 102, but it seems these are both system/scanner related. New ground I figure for all..scanners not used to 700 Mhz. trunking, and multi-site trunking being introduced to scanners. Reality is, it's not going anywhere. The money spent to use this system dictates they will make it work. The recent shooting at NIU shows why this system can have it's advantages. In Chicago, we really haven't been tested to use this for a large-scale event...yet. The dispatchers in the Districts I monitor seem to have a good grasp as to channel layout and uses. I recently heard a troopers portable inside a hospital, and thought it sounded great. I even made mention of that fact and he even said he likes the sound. I inquired about dead spots and he has yet to encounter a time he couldn't use his radio. Thought this was a compliment to the system. Thought i'd throw a new non-complaning post for those who wish to reply...open it up for a little discussion...

I have the 600 and have tried the Win500 and PSREdit and like it the best so far

I live it in the Metro East (IL side of the St Louis area)

I've chose to break it up in to "small chunks)

St Clair County Sheriff is on SC21 so I've one scan list for that

The only two counties in District 11 (Collinsville) I care about are St. Clair and Madison. So I create a scan group for D11 St. Clair County and a separate 1 for D11 Madison County. Madison County SO is on SC21 so I have a different Scan group for them

I've been doing Control Channel and Alternates

The other thing that will help for you is the VFolders

You can have up to 20 V Folders as well, so when you get your Home config settled you save that as VFolder 0. Then create other sets of talkgroups based on your "frequent" trip routes and see if that makes sense.

Chuck,
I monitor 4-5 sites everyday. I'm still experimenting. The radio has plenty of memory. That being said, currently I have each site in it's own system. Text tag each system with the site name of your choice. Example, I have 866.850, the CC at site 231, tagged as CONGERVILLE, which is the town that site is in. I'm still experimenting with scan list "construction" and configuration. So far this is working the best for me.

I agree with Dave's post, the Starcom has gotten better on the drop-outs problem...I find the coverage on a stand alone tower T125-Grundy Co to be exceptional, i receive D5,D2,D6,D17 98% perfect and the users complaints have slowed....The GRE500 is just excellent on this system when you find the correct spot in your scanner shack...The only problem i find is as Brian (statevillian) mentioned is in the mobile where the CC strength moving down the street varies alot unlike a analog CCtrunk system which seems more stable...I read in a electronics magazine this company makes a 700mgz mag-mount which may help...www.sti-co.com....Ron in Joliet

I've had extremely good luck with the Maxrad MAX7603S 700/800 antenna. It's the same antenna ISP is using on its cars now (although I still see the Comtelco 800 MHz antennas on some). Stick it on an Antenex GMB8 NMO mini-mag mount (or a "better" mount) and you're golden!

I'd recommend http://www.talleycom.com for the antenna and mount personally. I've had good luck ordering from them in the past.

In reference to the STI-CO antennas that Ron mentioned, I have several 23", 136-1GHZ, "Flexi-Whip" mounted on two different vehicles, (NMO permanent mounts). I use them on 800, VHF and UHF for transmitting. I have another I use for scanning, they work very well. You can tie them in a knot and they survive. I can even go through the car wash without taking them off.

2354. Monitoring starcom with a pro-96

Yahoo group: StarCom21
Date: 2008-02-22 03:36:58 UTC
From: tjrapps@sbcglobal.net
Topic: 2354 Message: 2354

Anyone else have problems monitoring starcom with their pro-96? I have no idea from one day to the next or one hour to the next if my reception will be good or gerbled and unreadable. I have the version 1.2. No upgrades have been done. It doesn't seem to matter if I use the rubber duck antenna or an outdoor antenna mounted 45 feet in the air. Any sugestions/comments are welcome. Thanks. Do I maybe need to get a GRE scanner? Is this a radio shack problem?

2355. District 2 using Highband

Yahoo group: StarCom21

I'm sorry Dave, where in the original post did it mention "covert activity"? If my memory serves me correctly, DEA as well as many other federal agencies can switch on encryption as needed. So, I'm sure this wasn't a "covert" operation. So IMO, feel free to post away on the proper lists.

Now as for non StarCom 21 stuff being posted on this list, that's another thing.

Here is the way I see it...

DEA is a covert agency, after all do you think they want everyone listening to who they are going to bust or their operations.

I am ending this now saying lets just not go on with discussions of sensitivity.

From reading the product description at the website below, it appears that this antenna is designed to be cut in order to achieve optimum performance at a particular frequency. Though it will likely pick up something at higher frequencies when left uncut, I don't believe that it is designed to deliver peak performance across the entire 136 MHz - 1 GHz coverage if left at its full length.

2374. RE: [StarCom21] motorola type 2 UHF

Yahoo group: StarCom21
Date: 2008-02-23 01:29:28 UTC
From: Mike Curtis (KC)
Topic: 2356 Message: 2374

Right, on the 996 once you select a “type” for the system (Motorola Type 2 in this case), you have to go into the “sites” for that system and add a site with the type “UHF”. Because the 996 lets you share talkgroups (defined in a “system”) across multiple sites, you have to define the site (or sites) you want to listen to. For example, you could enter multiple StarCom 21 sites (each with their own quick key even) in one “system”, thus only have to enter the talkgroups once.

In the UASD software, select System Editor. Click on New in the toolbar. Give it a System Name and select “Motorola Type 2/P25” for the System Type. In the System Editor window, click on the Site Settings button in the toolbar. In the Site Information window, click on New Site button in the toolbar and select “UHF” in the drop-down it gives you for “Site Type (MOT Type2)” and hit ENTER. From there, you can give it a site name, assign a quick key, and enter frequencies and Band Plans :)

2375. ISPERN Car traffic rebroadcast on 155.475

Date: 2008-02-23 09:48:30 UTC
From: Curt Underwood
Topic: 2375 Message: 2375

This morning I am hearing District Chicago cars on 155.475 MHz. It sounds "digital". It appears that ISP Chicago Units transmitting on ISPERN are rebroadcasting on 155.475 MHz from Starcom. It's pretty neat.

Curt

At work I hear this happen several times a shift. It seems that both Chicago and Elgin seem to be rebroadcasting their transmisions to their base over ISPERN, sometimes the signals are clear other times they sound like Dath Vader. Clips of them calling into dispatch of traffic stops or motorist assists come accross frequently. I don't know what causes this.

2377. Mobile Antenna

Yahoo group: StarCom21
Date: 2008-02-23 19:05:34 UTC
From: Cris Hanna
Topic: 2377 Message: 2377

I was at the St. Louis Hamfest a few weeks back and stumbled across this antenna and I’m very impressed with it. I have it on my 2007 Jeep Compass with my PSR 600.

Reception on all bands seems to be fine.

HYPERLINK "http://www.transeltech.com/tri/tri.html"http://www.transeltech.com/tri/tri.html

I also have not been plagued with the frontend overload using this antenna when in downtown St. Louis

Not sure if it's related or not but a couple brief times in the last
week, District Chicago comms came over Dist. 9 TG A. It wasn't clear,
sort of like it was bleeding over into D9 TG A. The dispatchers heard
it though as they asked whomever was transmitting to get off of TG A.
It was Dist. Chicago though as they announced it a couple times.

GRE just made it easier to monitor ALL control channels.
With the 1.2 upgrade you can load just the control channels,
using as many TSYS as necessary.
Scroll down to MULTI-SITE, set that to STAT,
next line, CHECK ALL CC, set that to YES.

From the GRE webpage.

"- Added within a TSYS object a "Check All CCs" option for
MultiSite=STAT. If
selected, on every SCAN mode pass, will force a check of all CC
frequencies
instead of stopping after the 'dwell' time expires.

- Improved control channel hunt speed, should result in significant speed
improvements for MultiSite STAT and ROAM trunking systems with large
control
channel lists

- Fixed MultiSite=Stat mode problem, if active CC is the first one in the
TSYS control channel list it was never checked"

Works like a champ for me.

George

It seems like you are getting good reception on Starcom21. Would like your opinion as I am not getting good reception at all. I have a GRE-500.
My signal keeps breaking up. Sometimes the signal is very strong followed by choppy, broken up response. Sometimes the signal does not come through at all. I have experimented with various antennas. Some were expensive. I have the latest software upgrade and reside in DuPage county. My signal strength varies between 99% and 85%.

I have contacted GRE which suggested it might be simulcast distortion. I drive all over Cook and DuPage counties and have the same problem everywhere.

How good is your reception? Does your signal break up? I am now wondering if my radio should go back to GRE for inspection/repair.

Topic: 2396 Message: 2397

The only thing they are next to is "Talk Group Descriptions"

It simply means they have been verified with the correct use of a TG
and/or heard in use.

Many TG's were "assumed" to be in a certain pattern at one point.

Eventually, the "star things" will be deleted.

They are not next to ANY frequency (in the data listings)
And next to "our own files?" --- not even sure what that means.

Terry

Next to a frequency in the RR DB it shows that it's a control channel, red means its a primary control channel whilst blue means a secondary.

Not sure about the * next to talkgroups.

If you have a digital scanner these are your frequencies, if not, you
will need a digital scanner or these are not even usable.

Tower Number 333 For ISP D13 Randolph Co Tower located in (Evansville)
856.21250 Primary Control Channels: 866.41250* 866.93750* 868.87500*

There are really only two scanner manufacturers that will do Starcom properly

You’re only other choice would be Uniden 996 if you want base/mobile

But I don’t think you’ll find it much different to program than the GRE

Cris is the bearer of bad news, you sent back what some would call
the better of the 2 scanners available. Both are harder to program,
that is why most of us have purchased the software to program them at
around 60 bucks I think had my scanner for a little over a year, and
I still don't know what all it can do, but I know the software was
great.

From another yahoo group. Names have been excluded for their privacy.

Hopefully said person doesn't get upset this time.

All:

As some of you are aware we have been working with M/A-COM for sometime to get and test one of their new model 7200 portable 700MHz/*00MHz P25 radios on our St. Clair County system and on the wide area talk groups. Yesterday with the help of xxxxxxxx MaCOM visited us, provided programming software, and assisted xxxxxxxxxxxxx of my staff in setting up the radios which they left with us for further testing. The radios did work and we talked to among others, xxxxxxxxx in Peoria from Belleville on a portable.

I understand that this is far from an official technical test which I will leave to the vendors it does fulfill one of our goals which was to see radios from more than one vendor operating on our system in the spirit of Project25.

We thank M/A-COM for making this happen. We thank Motorola for assisting as needed.

From Motorola’s website: HYPERLINK "http://www.motorola.com/staticfiles/Business/Solutions/Industry%20Solutions/Government/Law%20Enforcement/Statewide%20Systems/_Document/StaticFile/STARCOM21_Brochure.pdf"http://www.motorola.com/staticfiles/Business/Solutions/Industry%20Solutions/Government/Law%20Enforcement/Statewide%20Systems/_Document/StaticFile/STARCOM21_Brochure.pdf

“ Under this agreement with the state, Motorola has constructed STARCOM21, a new wireless communications system that Motorola wholly owns, operates, maintains and manages. Upon completion of STARCOM21, interested public safety agencies pay Motorola a monthly fee, based on a contract-specified service level to utilize the system. “

I can’t imagine Motorola is going to allow other vendors

There are plenty of other vendors who offer P25 compatible radios, such as Bendix-King, but this is a Motorola owned system, leased to the State and other agencies

From: chicago132000
Topic: 2424 Message: 2424

I live in Chicago right off of the Edens & Foster ave. I have site 115 programmed into my Pro-96 but the reception is horrible. I have all the setting correct. The control channel comes in very weak, so I barely hear any of the talkgroups. They come in garbled and only occasionally do I understand what's being said. I traveled around the area and was within a half mile of ISP's district HQ and it still was very weak and garbled as if I was almost out of range of the tower.

Anybody know why? Am I doing something wrong? I don't have any trouble with NWCD's digital system, that one comes in quite strong.

BTW, my Pro-96 has the latest software upgrade (1.4). It has the older CPU 1.1 though.

2427. Re: Any Truth To The Rumors?

Yahoo group: StarCom21
Date: 2008-03-19 11:30:47 UTC
From: ka9qpn@juno.com
Topic: 2418 Message: 2427

You may recall a post that I made several months ago about a bid solicitation on the Central Management Systems bid website. It was specifically for Kenwood radios to be used on the StarCom21 system.

It's a business arrangement. If Motorola can't get the radio business, I'm sure that they'll settle for their 'per keyup' fee for radios meeting the technical specifications rather than nothing.

Tom KA9QPN

This is my 4th time trying to reply, the first 3 by email, this time web-based, so lets se....

Third try ....

From another yahoo group. Names have been excluded for their privacy.

Hopefully said person doesn't get upset this time.

All:

As some of you are aware we have been working with M/A-COM for sometime to get and test one of their new model 7200 portable 700MHz/*00MHz P25 radios on our St. Clair County system and on the wide area talk groups. Yesterday with the help of xxxxxxxx MaCOM visited us, provided programming software, and assisted xxxxxxxxxxxxx of my staff in setting up the radios which they left with us for further testing. The radios did work and we talked to among others, xxxxxxxxx in Peoria from Belleville on a portable.

I understand that this is far from an official technical test which I will leave to the vendors it does fulfill one of our goals which was to see radios from more than one vendor operating on our system in the spirit of Project25.

We thank M/A-COM for making this happen. We thank Motorola for assisting as needed.

xxxx xxxxxxx

I think that was what he meant once you key up you get billed.

CMS that was who I saw the proposal on radios from.

2436. T115 on Starcom on PRO96

Yahoo group: StarCom21
Date: 2008-03-19 19:41:50 UTC
From: dataman60435
Topic: 2436 Message: 2436

I think your problem on the PRO96 may be the 1.1 firmware, it needs to have a CPU-1.2 to receive multi-path=CQPSK...Just a thought as i receive T115 here in Joliet on my RS2096 base fine with 1.2...Im not sure if you can get RS to install new hardware in the PRO96 cause thats a early model....

Hi Gregg:
Dunno if you remember Steve Caccioppo, K9MBO. He's moved to California and has a THALES VHF P25 radio. It is sweet. He linked me to a utube site where the radio was being programmed from the front panel.

Thales has a contract with GSA and DOD. The FPP radios are used heavily in forest firefighting where they need something frequency agile.

I think you're right. I kind of figured as much after I posted. Not going to spend the money on upgrading the 96. Wouldn't be worth it since it won't do 700 mhz anyway. As soon as I got some extra cash, I figured on going for the 396T or the PRS-500. I just I'd give a shot with the 96.

I’m here in St. Clair County

Kind of depends on what “local” agencies you want to listen to (i.e. Belleville PD is not on Starcom)

Are you importing from Radio Reference into One of the Software programs?

2454. A Brief Tutorial on "Simulcast"?

Yahoo group: StarCom21
Date: 2008-03-29 13:52:22 UTC
From: Jack Waterman
Topic: 2454 Message: 2454

Please excuse the blank message preceding [unless the Moderator canned it...]

The question: does "simulcast" mean that all of the towers/sites in a StarCom-21 cluster transmit the same traffic at the same audio level (the latter being a major advantage of repeaters)?

The issue: I live less than five miles from the northern-most tower for Lake County Site 108. Most traffic I hear is either D-02, D-Chicago, D-15, or ITHA (unless I lock them out, which is most of the time <grin>). Because what I'm hearing is the output of a repeater, I expect most traffic to be at a relatively constant level. Of course, this would only be true if "my" tower consistently transmits all of the traffic I'm receiving (including cars on I-80 south of the city) and I'm not hearing a more distant tower most of the time. Now, my quandary: Occasionally an ISP car will BOOM in, MUCH louder than anything received in hours previosuly. I'm going to see if I can narrow this down to a particular TG or even car; I haven't done that so far but I believe it's the same TG or car each time.

Meanwhile - is there some potential explanation? Does "my" tower only xmit when there's a car nearby? I'm awaiting another "a-hah" moment...

2459. St. Clair Co Questions

Yahoo group: StarCom21
Date: 2008-04-02 00:35:56 UTC
From: scott4957
Topic: 2459 Message: 2459

I'm setting up my 996t for the St. Clair County area. How do I know which talk groups are on which system, or are all talk groups in the area on "for example" St. Clair, Belleville, and Sparta? I of course get great coverage with the St. Clair system in the control tower, but I don't know if all the talkgroups I put in come through that system. Thanks for the help.

Scott

Yes, I see that, but for example I hear ISP talkgroups on both St.
Clair simulcast, and the Waterloo system.

The way I have my receiver set up is with several systems in my area
"e.g. waterloo, st.clair, belleville, sparta, and then I have groups
set up such as police, fire, EMS, ect.

I guess my question is, are all my talkgroups broadcast on all the
sites I have programed? Or to word it another way, if I turn off all
my sites but waterloo, will I hear all my talkgroups?

Topic: 2459 Message: 2463

Are you using Programming Software and importing via Radio Reference (this is a hint that the answer should be yes ;-)

It will make it much easier to import

I own the GRE-600 and use the programming software import from Radio Reference Select Trunking, US, Illinois, St Clair County

Should then be a drop down of systems and you should see Starcom

Then select Primary and Alternate Control Channels

Then go to the talk groups tab

Hopefully you will see a drop down there where you can select St. Clair County and simply select which talk groups you want

At least that how the software I'm using with my 600 works

Cris in Belleville

2464. Re: St. Clair Co Questions

Yahoo group: StarCom21
Date: 2008-04-02 05:17:54 UTC
From: scott4957
Topic: 2459 Message: 2464

Thanks Cris. I am using pre-made files for the StarCom21 system off of the BCD996T yahoo group. I have every site in the whole state, and separated them by South, Central, and North. Then I locked out the sites that are not near me, or near areas that I visit throughout the state. In the Central and North I left the receiver in ID Search mode rather then programing in a bunch of talkgroups. In the South System I have the receiver set to ID scan mode because I know all the talkgroup ID's that I would like to listen to in this area.

All in all it is working great, but I guess I am missing some basics about how the system works. All I really would like to know is; is there any way to tell what talkgroups tx on what sites?

An example would be District 11 ISP, they would broadcast on the St. Clair simulcast site, as well as the Belleville site and many others because they have units all over the district. On the other hand Fairview heights seems to only broadcast on the St. Clair simulcast site, there would be no need for them to broadcast on other sites because the St. Clair system gives them full coverage of their jurisdiction.

Ii appears that the talkgroup portion of the Starcom21 radioreference page is in its infancy. I see that some sites or counties have many talkgroups listed and others are not even mentioned. St. Clair county has many talkgroups listed, but the Belleville site is not even on the talkgroup section. Grated there are many talkgroups that will be shared, or simulcasted between the Belleville and St. Clair site, but won't there be many that can only be heard on one or the other?

Correct me if anything I'm saying is wrong here. I'm just trying to get a deeper understanding of how the system works. Thanks for your help guys.

Alright Rich, I think I get the drift. That is what I figured all along, so other then finding a list of talkgroups, the only other way to know what talkgroups are on what towers is to search them out.

I'm guessing in time the talk group lists on radioreference will grow. Right now St. Clair county is one of the largest, but they do not even mention what talkgroups are specific to other near by sites such as Belleville, Waterloo, ect. This is what confused me, I put in all the sites near me and where I commute, but could not find talkgroups listed for those sites other then St. Clair. Then I noticed some of the talkgroups I put in the receiver were being picked up by other sites then just St. Clair. I see now that some talkgroups will be broadcast over multipliable sites, and others on just a single site based on the needs of the department and how far they span.

Yeah I did not realize that St. Clair counties equipment was not part
of StarCom21, nor did I realize that Belleville even had their own
system, I just thought that was the site location. I'll have to get in
touch with the Admin you are speaking of, I think I know him, but
forget the name at the moment. Looks like I have a lot of stuff to go
through before I get the radio set up correctly and logically.

Thanks, Scott

2469. RE: Fwd: [StarCom21] St. Clair Co Questions

Yahoo group: StarCom21
Date: 2008-04-03 03:06:42 UTC
From: Cris Hanna
Topic: 2459 Message: 2469

Good Stuff, Rich

Didn't realize that 359 was not part of Starcom. I'm thinking that should be fixed in the RR imports because it comes across as part of Starcom21

So if I wanted a separate TSYS/ScanGroup for St. Clair County which I have now. Actually one for Sheriff and then another for all the CENCOM (small town PDs), the only tower I need is 359? And I could leave 359 out of my District 11 TSYS/ScanGroup?

Do you happen to know if Fairview Heights is running off of St. Clair County's or SC21?

From: StarCom21@yahoogroups.com [mailto:StarCom21@yahoogroups.com] On Behalf Of Rich Carlson
Sent: Wednesday, April 02, 2008 4:13 AM
To: StarCom21@yahoogroups.com
Subject: Re: Fwd: [StarCom21] St. Clair Co Questions

Well part of the confusion is the fact that Site 359 actually is owned and operated by the County, not StarCom21. They have 10 sites scattered about St. Clair County. Each of these 10 sites carries the exact same freqs and talkgroups, and most traffic will be only St. Clair County traffic. Add to that mix the fact that Belleville and Mascoutah also have separate "real StarCom21" sites on the same tower. (Site numbers 305 and 301)

I wrote the files you downloaded from the 396 group and, if you downloaded the batch from last month, you have a pretty comprehensive list of St. Clair talkgroups. They mirror pretty closely what Radio Reference has, since we share info freely. Most of the data from that end of the world came from the RR Admin for Illinois, who knows that area well and monitors St. Clair County most of the time, so the info is spot on.

The talkgroups are NOT tower specific, almost any talkgroup can be used on any StarCom21 tower, it all depends on who is working where. The exception that proves this rule is St. Clair County and Site 359, a majority of the traffic is going to be 7000 and 7100 series talkgroups.

Yes the McHenry County Sheriff's Office and 9 Police Agencies they dispatch for are going to Starcom 21. The fire agencies are staying on there frequency, for many reasons, all of which are good. I can also tell you that the dispatchers are getting trained in next couple of weeks on how to use the system, so I would think that the migration over to Starcom will be pretty soon.

From: Mike Curtis (KC)
Topic: 2485 Message: 2485

Finally heard a DNR unit ID this as "D6" (as opposed to the normal "DNR StarCom" designation). In that case, the following talkgroups "should" play out as -

1276 - DNR Region 1 Dist 1

1277 - DNR Region 1 Dist 5

1278 - DNR Region 1 Dist 6

1279 - DNR Region 1 Dist 7

1280 - DNR Region 1 Detail A

I've logged traffic on all of those talkgroups, but the DNR units around here roam so much it's hard to pin down who's from what district J

I just ordered the Uniden BCD396t. Cant wait for it to get here.

2487. Springfield/Sangamon County moving to Starcom21?

Yahoo group: StarCom21
Date: 2008-04-10 03:54:52 UTC
From: citrus801
Topic: 2487 Message: 2487

Is Springfield/Sangamon County public safety looking to switch to
Starcom21? I found the following in the City of Champaign Council
Bill No. 2007 - 277
http://archive.ci.champaign.il.us/archive/dsweb/Get/Document-5561/PSIC%20CB%2010-25-07.pdf

*Springfield-Sangamon County will be requesting $2.871 million to
connect their dispatch
center to the StarCom 21 network and to purchase new subscriber radios
for Springfield
Police and Fire and for the Sheriff operations.

It also mentions what we already knew about neighboring Macon
County/Decatur:
*Decatur-Macon County will be requesting $2.0 million to connect their
dispatch center to
StarCom21 and purchase new subscriber radios for Decatur police and
fire and for the
Sheriff's Department.

2488. TG 3371 / Site 115

Yahoo group: StarCom21
Date: 2008-04-11 13:30:16 UTC
From: Jack Waterman
Topic: 2488 Message: 2488

My 996 caught a brief exchange this morning that displayed as StarCom-21 Site 115 TG 3371. I don't see any TGs in the 3000 series in the profile. Is this likely a scanner error or another system (where?) being interpreted by the scanner as StarCom-21 Site 115. There was definitely two-way conversation, not just noise.

2490. McHenry County StarCom Site 146

Yahoo group: StarCom21
Date: 2008-04-12 21:48:03 UTC
From: n9jig
Topic: 2490 Message: 2490

I took a little field trip this morning and confirmed that McHenry County is using Site Number
146 along with System 140 for it's new StarCom21 compatible radio system. The control channel was on 866.7375 this morning.

System freqs are:
866.35000, 866.73750 867.55000, 868.03750, 868.31250.

StarCom21 site 120 sites are co-located with these sites as well, using:
867.41250, 868.43750, 867.91250, 855.98750, 866.96250

The StarCom21 Profile has been updated to reflect these changes. Also included in the Profile
update is some excellent southern Illinois Updates from a friend in Little Egypt.

2494. Re: Uniden Updates

Yahoo group: StarCom21
Date: 2008-04-14 16:49:49 UTC
From: jammit2004
Topic: 2491 Message: 2494

I run a BDD996T to monitor Starcom.

I loaded the updates the night they came out. I monitor southwest chicagoland, Plainfield PD on Starcom, Joliet MOT Public Safety, Naperville, WillCO EDACS, and WESCOM. I still get a lot of garbling on the Will County 113 site, and the DuPage site still works better than Will for what I want to hear.

After the install I still get the tollway and ISP very well as I did before. However, I bought this radio primarily to monitor Plainfield PD, which is better now, but still less than 25% of the transmissions are getting through decode. Before, it was maybe 10%.

Since the firmware update, when Starcom DOES GET decoded, it sounds a good bit better..maybe even sounds what I would consider good for digital. It still fails to decode a lot of the time even on groups that come in very well. I have lots of signal strength (though the meter fluctuates constantly), and have tried all 4 of my antennas with no noticeable difference. Attenuating just kills all the traffic, so it's probably not an overloading situation. I did find that setting the P25 decode to 400ms is the best setting for me after much trial and error. Setting Digital End Code to YES seemed to help the scanning. Also I've adjusted the hold times down to 1 second, which now matches my PRO2055 for scan speed catching the traffic on MOT adn EDACS and keeps the conversations going to my liking.

Conventional, MOT, EDACS all still work just fine. My squelch knob registers no change on screen until it's turned to about half way, then it starts with zero and goes to 20 if I recall correctly....that's odd, and probably a remnant of the install??

I built all new clean profiles ahead of the upgrade, so nothing to report about that. No issues at all getting the files downloaded or installed.

I'm going to crosspost this in RR forum as well. For purposes of Starcom, any advice you all might have on getting Plainfield PD to come in better will be appreciated.
Eric

Thanks for your update information Eric and Bill. I'm not sure how many others have tried this update, but it appears no changes for us monitoring Starcom 21, despite some rave reviews on the RR Uniden boards from other systems. Like you Eric, I have tried many tweaks and have tried the "new" Digital End Code Setting without much luck. I'm also baffled by the Control Channel flucuation while monitoring a simulcast site, mine being Site 102 up here in Chicago. I know of others monitoring the Painfield TG's and report similar issues you expieierience. For the most part, I'd say i'm getting 95% of these transmissions, adequate but not anywhere near what it should be. I know of others using the GRE scanners and also report problems. I didn't hold out high hope for the updates, and glad to report wasn't disappointed.

The new update made marked improvement to the sound of MDICE in Champaign which is a simulcast system but this system hadn't been exhibiting the issues that other simulcast systems (ex. the Peoria Starcom21 simulcast site) are having. MDICE sounds less "pixelly" and I would qualify listening to MDICE on the 396 as now 'tolerable'. Starcom21 sounds slightly better but not as noticeably improved (ex. I'm speaking specifically about Normal PD, ISU PD, and McLean County Sheriff off the Normal (non-simulcast) site).

Topic: 2497 Message: 2497

Hi all,
Well I finally got off my backside and programmed in some starcom freqs. Worked right from the 1st frequency I programmed-Belvadere. Are there any tricks to programming? Should i jsut put in all the primary (red) freqs opr is the list of 'all control channels better? Alos I just wanted to tell you that i moved from Elgin to Kingston. My daughter is a dispatcher for Elgin, but I could not hear the TRs from Kingston. A long time ago I bought a GRE super amplifier. freq 100Mha - 1Ghz with gain of 0-20 db. neverhad much use for it near the city but where I'm at now I can hear Elgin low band with the amp and a 800 cellular mag mount on my window sill. Pretty cool!

OK. Here's what I have so far....and I agree with Dave (Werinshades)...Nothing new and improved on Starcom with the updated firmware AT ALL. No audio improvement. No decode improvement. None. Nada. Zilch. We got nothin'.

Posted to various groups and forums on Monday, April 14, 2008:
I still think it is very, very early for anyone to be making claims without real good testing in a variety of areas with a myriad of settings. I did the download Friday afternoon and spent the past 3 days where I had free time experimenting.

Starcom IN MY OPINION is just a mess. Not the Uniden scanner at fault so far as I can tell. No change noticable so far on sites 101, 102, 113, and 115. Not even audio in my opinion. Tonight site 113 actually sounds great in Homer Glen/Lockport. Weather is clear tonight too though. When weather was bad...windy, rainy, Starcom 113 totally sucks with drop outs. Tonight has been as good as that site has always sounded for me. Plainfield PD is clear on a scanner and no one on their end is complaining tonight. Weather impacts this digital stuff. No question.

I have noticed no change to Motorola 800 trunked systems. I have found TG 80 to motorboat on the O Hare 400Mhz UHF digi system and this weekend was no exception. But, I also noticed that when TG 48 or 80 motorboated, the GRE 500 would pick up a bad signal but at least catch it and struggle to hang onto it. Sadly, I was mobile so I couldn't document which frequency was at work when this happened.

Chicago Police Zone observations: While in a particular zone/district. ..all 460Mhz conventional analog, the squelch tail after the dispatcher would talk was almost unbearable. Adjacent zones, no problem. I had to set squelch to 6 or better to lose the squelch tail. It ONLY happened when I was in that Zone. And, no, the answer isn't to attenuate. I never had to and shouldn't have to attenuate. This is one of the only residuals I see from the update to this firmware. My Uniden 330 on same zones were perfect at a squelch setting of 2. As was the 396, pre update. However, Lemont PD uses UHF conventional. ..In downtown Lemont....no squelch tail.

LTR in UHF and VHF range....not really tested yet. LTR still works so that is a plus. I will concentrate on the LTR stuff soon.

Midway UHF and Metro Correctional Center. I have noticed no change in just 2 hours of listening. Both are still adequate.

EDACS. I had original firmware in the 396. Pre update...no beeps at end of transmissions. Same with my 330. Post update..one beep or half beep before the system moves on. Various antennas, same result.Test

area...Will County EDACS system less than 5 miles from tower. Yet to sample from farther away. 2nd thing I didn't like about the update.

Comparison with GRE 500: Starcom. Both drop transmissions in middle of conversations. ...especially in bad weather and windy conditions. I never realized how many full transmissions I was missing on the 396 until I puchased the GRE 500. Nothing seems to have changed in that respect after the updated firmware. The 396 still misses many conversations. ..even after I played with RF gain and AGC resume values. Digital audio?...Unfair to compare. The 396 speaker is awful. No way I will touch that question. It can't reasonably be answered in my opinion. The 396 speaker ruins the real potential of this scanner.

Scan speed?...I don't care so I haven't tried.

Just preliminary friends. Much more work to do with various settings and playing before one can truly render a fair and honest report of findings.

My comments, on listening from the Madison County area, hearing the St. Clair County System (T359) and many others in the area; receiving District 11 primarily and D18 and D13 when close enough to a site (D12 at times too).

MUCH improvement on the decoding on both 700 & 800mhz, rarely hear the digitized voice or the slow decoding of the control channel.

The st clair county system is simulcast, but luckily enough, it appears i'm only close enough to get the RF from one of the sites, so no problems there or "can not comment" on how it is working with simulcast until I make a trip to the Belleville area.

EDACS monitoring or EDACS beep; not sure yet. Only monitor 1 TG on one EDACS system right now.

Also, it appears to be scanning trunked system much faster now and not hanging on a site (with no traffic) as long as it used to.

Rarely ever heard a dropped transmission before or after....

Good luck to all...

Terry

2503. Normal PD's new radio numbers

Yahoo group: StarCom21
Date: 2008-04-15 22:50:39 UTC
From: citrus801
Topic: 2503 Message: 2503

I found out last weekend that the Normal PD portables have new radio id numbers as shown on Pro96com (maybe they are using new portables?). Before all the numbers were 413100's but now they are 5000's. When the officer goes 10-41, they'll say "METCOM, 516 10-41 unit 84, radio ID 5021, my four digits are 3516 and I'll be working area 4 tonight." They were giving their radio number all weekend when they sign on. Also worth noting is that the portables appear to be shared now because the radio ID that is used by one officer today will be used by another officer tomorrow (whereas the old Starcom portables were just used by one officer). I also saw a few sheriff's deputies and one Normal Fire unit using a 5000 series radio id.

Other notes:
*TG 4026 was referred to as channel 2 by ISU PD units
*When METCOM tones out a fire call for Normal FD, you will see an "Alert" on the GrantLog screen alerting the three radios: Normal Headquarters, Normal Station 2, and Normal Station 3. I also saw an alert in the GrantLog alerting the McLean County Animal Control officer.

Dave,

Site Mileage form my house
101 5.5
102 2.2
115 8.8

These appear to be the sites that are close to my house. 102 and 102 recieve fairly well. 115 keeps dropping out.

George

Do you think you can research this a little further...LOL!! I'm
impressed George as I have no clue how far I am from sites. I guess
it could be a lot worse as we can hear this site pretty well.

I am just running the Control Channel as that seems to be the fastest way to monitor this site. I have noticed the additional frequency, but so far Control Channel of 774.34375 is still the primary. How often do they change the frequency for the Control Channels on an average?

With the newer versions of the Motorola trunking software, control channels hardly change at all. It's not like the older trunked systems where the channels would rotate every 24 hours :)

I think Motorola would be the people to talk to, but I don't know why you couldn't do it. ISP has ISPERN VHF to Starcom Patch and vise versa same with IREACH.

I heard a pursuit not too long ago, and the dispatcher asked if the officers wanted an IREACH patch setup so they could talk with the local officers, and the officer told her negative because the pursuit was terminated, and they were on foot.

It would work as an autopatch I would say.

2515. BCD396T Data Port "Fell Out"

Yahoo group: StarCom21
Date: 2008-04-23 12:53:46 UTC
From: Terry Weatherford
Topic: 2515 Message: 2515

Hello all..

I've had a pretty serious problem occur.

For over a week now, I've been trying to figure out what happened to cause my radio to stop receiving programming via the data cable, either using Uniden, ARC or BCtool.

Figured it yesterday!

The DATA PORT from INSIDE the radio has come attached from the radio and is now connected to the end of the cable.

You can pull it off the cable and push it back in, but still not connecting properly because the pins appear to be bent.

Plus it also falls out again when you plug the data cable back in.

I am VERY UPSET as I am planning a trip to Upper Michigan/Canada in a week and wanted to use the scanner to monitor the Michigan P25 system and local ops when vacationing.

I'm going to have to attempt "on-air" programming, but really don't want to have to rely on that.

Any ideas? Please Help!

I am located in Glen Carbon IL, about 15 miles from St. Louis.

Thanks

Sounds like you need to find an old Ham Radio guy that can reconect
the terminal block to the pc board, someone built the scanner and I
would suppose that an expert in electronic repairs can replace the
port. Or the other route is BACK TO UNIDEN for repairs, but would
guess that they will just replace it with a re-fur

From: dcserkits
Topic: 2513 Message: 2517

You might try Normal FD - I talked with them a while back and they have a cross-band VHF-to-STARCOM21 box in the cab of the rigs. They step off the rig with a VHF portable and talk-repeat back to dispatch via STARCOM21. The fire officer carries two portables (VHF and STARCOM21).

Also, St. Clair County moved MANY fire agencies to STARCOM21 and I'm sure there are many ways the cat was skinned.

PLEASE make sure you can maintain interoperability on VHF. Check out the THALES Liberty radio since it will do STARCOM21, UHF, and VHF in one portable radio. Google "THALES LIBERTY". Thales rhyms with "Dallas".

From: Jack Waterman
Topic: 2520 Message: 2520

I've identified one TG on the MPSCS system definitely: 3282 State DNR Fire TAC. It's clear from their traffic that this is the correct TG identity. The control channel is 867.4125; I've heard voice on 868.2750 and 866.5875.
This afternoon's transmissions across the pond FAR exceed anything I've heard from the StarCom-21 Site 108/Zion in terms of volume and clarity! The Zion site is less than 5 miles from my home..
Hmmm

Be a better friend, newshound, and know-it-all with Yahoo! Mobile. Try it now.

I and another person gave you our advice, but I am not looking at the scanner so I can not say for sure, but I have repaired and replaced electronics in scanners for some time. I am to far away to do this repair, so find a radio shop that can in your area, or some older Amateur radio person that knows how to do repairs. Sounds like about a 2 hour bench repair, and radio shops charge 55-80 bucks an hour and the earn it.

2526. Purchasing a BCD396T

Yahoo group: StarCom21
Date: 2008-04-28 19:00:41 UTC
From: tgbrengel
Topic: 2526 Message: 2526

Hello everyone.

I have been set on purchasing a BCD96T for a while. I'm in law enforcement and would like to monitor ISP, Lake County Sheriff, and NWCD. From what I've seen and heard, this Uniden scanner is the best. I'm looking on recommendations on where to purchase from, what software to buy, and accessories (antennas). I plan on using this radio on duty to monitor what our neighbors are up to so I know what they are doing when I see them flying by.
Thanks for the help. Also, looking for someone to help me set up the radio (will pay). I'm a conventional scanner guy and radio amature (Ht1000 and CDM1250s), this digital stuff is beyond me.

Thanks again!
Tom

Also to add what Rich says I would Purchase a good Antenna,
For a while I have been using the Radio Shack 800MHZ Rubber Duck

http://www.radioshack.com/product/index
jsp?productId=2102525&siteID=fDklYaGulKY-7ZGjm0aNHMFOFjV80lcbYQ

The 396 Comes with an SMA to BNC Adapter in the box so you will be all set
then
I find the stock antenna really is not up to par on 800MHZ systems and this
rubber duck does an excellent job.

Also get a good lighter plug charger and some good rechargeable batteries.

You can get a 396 from various sources it will be around $500 + or -
depending on where you get it from

Here is just one dealer
http://www.scannermaster.com/BC396T_Scanner_Package_p/01-721037.htm

The case they have is nice and will protect the radio from damage since you
will have it on duty.

Hope this Helps

ScannerMaster is probably the best place to buy IMHO. www.scannermaster.com

As for accessories, I would suggest the USB-1 cable. This allows you to use
a computer that does not have a serial port. If you already have a
USB-Serial converter then that will work fine.

I also suggest ARC-396 software. This allows full control and programming
and has an easy to understand interface.

You can download ARC396 files for StarCom, Lake County and others from
various sources, such as RadioReference, or the CARMA Yahoo group. If you
have ARC396 and are a paying member of RadioReference then you can download

systems directly into the scanner.

From: Brian
Topic: 2526 Message: 2529

I have the GRE500 and I would look at that too before making any purchase. In the Chicagoland area it receives FAR MORE transmissions than the 396 ever does...even with the Radio Shack 800Mhz antenna...which, by the way, is awesome. In my opinion, the 500 is a much more reliable receiver. I have done a lot of testing with both the 500 and 396 in many geographical areas in Chicagoland and the 500 blows the 396 away on Starcom21. Also, better audio, better display, so much more.....and same price!!!! Just my opinion.

That would be the PSR-600. Identical in firmware to the PSR-500. It works well on P25 digital C4FM and CQPSK, however it will not mute encrypted comms that the BCD996T will.

I found a You tube video of a PSR-600 (The 996 Equivalent) in action monitoring the South Carolina Palmetto System

http://youtube.com/watch?v=aYj4NJcHcB8

Looks cool, makes me kind of sad I jumped the gun and got the 996

Well, if he needs it for work....better to hear more transmissions and be able to work around encrypted transmissions, than hope you are hearing everything with the very limited encryted comms getting muted. The encryted comms sound no different than those very early Nextel direct connects that would go digi-crazy. The PSR500 by GRE is still the king of reception. Try it and see.

Great dialog on what will work with Starcomm.
Quick ? on renading. I live in Kankakee County and
they have a 10 or 12 channell Moto Type 2 trunking.
One freq. was on the borderline (with Nextel) it is bieng changed- if they reband will
the GRE handle that? I heard the Pro 97 Rat shak would not.
Opinions? Thoughts?
Thanks- Starcomm newbie- about to spend my stimlus check!

Had a bunch of new talkgroups show up on T134 (Ottawa) today. No voice traffic heard, but affiliations on all of these channels from radio IDs in the 6600xx series. Looking in my database, I've seen radio IDs like this in the past on IESMA and IL Public Health.

Subject: Re: *StarCom21* GRE500 and Starcom

Threaded Responses:

Q1: Would that we a "send in" and update or user friendly so we can do it? Would it need a firware update?

A1: Both the GRE and Uniden scanners use a downloaded file and application to perform firmware updates. They are not difficult, you just have to follow the instructions closely.

Q2: Does the PSR 600 support GPS-enabled scanning, like the 996? I don't travel all that much, but when I do, I love this feature. If the PSR600 had this, I would be interested in learning more.

A2: No, the GRE radios do not support GPS connections like the BCD996T does.

The general difference between the GRE and Uniden scanners are:

GRE has generally better audio, both digital and analog.

Each uses a unique programming scheme that can be either extremely difficult to learn or easy to learn. Personally I do not understand the GRE system but I have figured out the Uniden. Others have mastered both or just one. Both are much different than the old hard coded banks of older generation scanners.

They have different auxiliary features. For example the Uniden has GPS connection (BCD996T only) and Fire Tone Outs (996 and 396). Look thru the feature lists for each and see if any of these meet your needs.

What makes the 996 so great for StarCom21 users is the GPS feature. If you travel around the state a lot this will pay for itself quickly.

The 996's digital decoding in non-simulcast areas is fine, and after the firmware update is is a bit better in the simulcast Metro areas, but the GRE's still decode digital better. I live in the Chicago area and have noticed a marked improvement in the 996 since the upgrade but it still can be a lot better.

Topic: 2526 Message: 2545

I would consider buying your BCD396T scanner from
Bearcatwarehouse.com.

I've made two different purchases, the 396 & the 996 digital models
from them. Them were the cheapest I found online.

I would also recommend downloading the ARC396 software from Butel.
The software makes programming the scanner a piece of cake. You can
download the data from Radioreference.com directly into your scanner.
The scanner comes with the programing cable included.

2546. Online Scanner Feeds

Yahoo group: StarCom21
Date: 2008-05-01 07:58:58 UTC
From: Terry Weatherford
Topic: 2546 Message: 2546

Effective NOW through Tuesday evening....

The StarCom21 (Madison County IL) feed will be off line.

The St. Louis Metro Police, Fire & EMS feed will be broadcasting Madison County area Public Safety (non-P25/no SC21).

If you don't know about these feeds, they are not on teamspeak/IBN or INB.

They are located at http://www.ScanIllinois.net and can be played using your Windows Media Player or WinAmp

I will be on road trip/vacation to upper Michigan and will be monitoring the statewide system there.
And while up there, I'll be monitoring the home feed, granted no major storms or power outages occur on Friday.

Thanks
Terry Weatherford, WX9SAR

2547. Just got a GRE PSR-500

Yahoo group: StarCom21
Date: 2008-05-01 21:58:11 UTC
From: chicago132000
Topic: 2547 Message: 2547

Finally broke down and bought a PSR-500. Any good ideas on how I should set up Starcom sites in it? I live in Chicago and travel around the area daily. Currently have the control channels for the Cook North, Lake County and Cook South sites programmed in. They're mapped to the same scan list. Although it seems to work ok like that, I'm wondering if it's better to put each site into a separate scan list and switch to the appropriate site depending on where I'm at?

Starcom does sound quite good on this unit although I still get garbled transmissions every so often.

Also this scanner has a feature for multi-site systems where you can set it to "roam", "stationary", or "off". Would it be worth setting this?

Any help would be appreciated.

From: Mike Curtis (KC)
Topic: 2547 Message: 2550

Depends on how you look at it :) The 396 can hold around 6000 "items" - Systems, groups, and channels. "Systems" can be assigned to any of 100 "quick keys". Each system can have up to 200 channels/groups, each with their own subset of groups that can be assigned to 11 "group keys" (0 - 9 and '.' which means always scanned).

The GRE units (I don't own one so please correct me if I'm wrong) can hold 1800 "objects" (Trunk channels, talkgroups, conventional channels, search information, etc) in each of its "V-Folders" and those objects can be assigned to any of 20 "scanlist" keys. The GRE units have 21 sets of V-Folders. I know in the PRO-96s that changing V-Folders meant a reboot of the scanner, I'm not sure if that's true with the new GRE units.

I'm biased (I own a 396 and 3 996s) but I much prefer the way Uniden does memory management and "quick keys". Having "groups" in Conventional systems is just awesome J The downside to the 396 is that it doesn't have the "multi-site" setup for trunking systems like the 996. The same multi-county configuration of StarCom and local systems may completely fill a 396 due to duplication of talkgroups (which can be worked around like you have done) but only touch a small amount of memory in a 996. I find I run out of quick keys in the 996 before I run out of memory.

As far as performance goes, I'll leave that up to the other people to explain. I've been very very happy with the performance of my Unidens (I've been a Uniden convert since the first trunk-tracking BC235 scanner) and the only thing I use the 2 PRO-96s I have is for Pro96Com :)

From: StarCom21@yahoogroups.com [mailto:StarCom21@yahoogroups.com] On Behalf Of William Edwards
Sent: Friday, May 02, 2008 11:07 AM
To: StarCom21@yahoogroups.com
Subject: Re: *StarCom21* Just got a GRE PSR-500

I don't have a GRE radio but do monitor SC21 (also Indiana SAFE-T, Ohio MARCS, Michigan whatever the acronym is, and other big systems) with my 396. In all cases, I don't break it down by site because there are limits as to how many frequencies and Talk Groups the radio will hold. There must be some similar limits in the GRE.

If you get close to filling the radio, which I have done, then you realize that you don't want to use resources to hold duplicate freqs or TGs. For that reason, I put all of the control channels for the SC21 sites I want to monitor into a single system and put all the TGs I want

to monitor in that system. By this method, it's harder for me to know which Site I am receiving, but that's not something I usually want to know anyway.

Other listeners really do want to know which site they are hearing either because that's part of the fun of the hobby for them or because they are the good lads who keep the rest of us posted as to which control and voice channels are changing.

So I think if you have the memory space, then loading by site - and maintaining duplicate copies of system info - may be good. If you are like me and don't have enough memory in the system already, then you see what to do.

One correction - I said above that I put all the SC21 stuff that I want to monitor into one system. I said that as an illustration for folks who have a base station or don't normally travel out of the Chicago area. I use my 396 in a mobile application. So, what I really did was divide Illinois into 4 zones: Chicago area sites, all the other northern IL sites, central IL sites, and southern IL sites. By this method I can enable groups of sites as I travel around the state.

Finally, regarding the Great Uniden vs. GRE Debate, I don't recall seeing anyone comment on which radios have the larger memory. To me, that would be a selling point for one radio or the other because, as I said, I am living proof that you can consume all of the recources in these radios! Does anyone know the limits on systems, talk groups, frequencies, etc in the GRE radios? Let's compare.

Bill E.

Error! Filename not specified.

2551. Re: *StarCom21* Just got a GRE PSR-500

Yahoo group: StarCom21
Date: 2008-05-03 02:41:12 UTC
From: chicago132000
Topic: 2547 Message: 2551

Storage cpacity isn't an issue for me. I doubt I'll run out of space in the scanner anytime soon. The way the GRE works with scan lists and TG's pretty much eliminates the need to enter any TG into the radio more than once. I only program the specific TG's I want to hear into it (which for ISP is pretty much just the troopers on the highway)I'm more interested in setting up the sites in the least complicated way possible. So I figured I'd see how others have their's set up to get ideas to experiment with. I'll probably end up trying all kinds of different set ups to see what works best.

I'm not familiar with Uniden scanners at all, so I can't make any real head to head comparisons between them and the GRE's. I mainly went with the GRE because I was a PRO-96 user almost from the day they came out so I'm pretty familiar with GRE in general. Since I've only had the 500 for 4 days, I haven't had the time to fully play with all of it's features and capabilities yet.

Date: 2008-05-04 21:50:03 UTC
From: citrus801
Topic: 2503 Message: 2552

Normal PD is using their old 4131xx series portable radio ids once
again. I haven't seen any of the 5000's anymore.

From: mvhyden61
Topic: 2553 Message: 2553

Hearing multiple M-Mary units on TG 9088 communicating with unID'd unit taking radar on I-88 just East of Quad Cities area. Mary units then switch to 9089 to communicate stop with D7 Rock Island. RR.com lists 9088 as ISP CMD-Z1C and 9089 as ISP SPEVTZ1A. I have assumed that M-Mary units are motorcycle units. Can anyone confirm?

Be a better friend, newshound, and know-it-all with Yahoo! Mobile. Try it now.

2560. Michigan Traffic

Yahoo group: StarCom21
Date: 2008-05-09 21:38:00 UTC
From: Jack Waterman
Topic: 2560 Message: 2560

Is anyone else receiving transmissions from Michigan? Their traffic - TGs in the 3XXX series - is booming in on SC21 Site 115 this afternoon. I never hear SC21 traffic on Site 115 at home, and most of these transmissions are as clear, or better, as anything that's actual SC21 traffic on my local Site 108.
Weather? Any way to eliminate?

Be a better friend, newshound, and know-it-all with Yahoo! Mobile. Try it now.

2561. SC21 in Central Illinois

Yahoo group: StarCom21
Date: 2008-05-10 04:40:57 UTC
From: James
Topic: 2561 Message: 2561

FYI: I read some where on the net that supposedly Springfield, Decatur and Champaign County maybe in an agreement to combine all these into one applicatio for StarCom21. After checking out the Champaign City website I found the folling link.

http://www.metcad911.org/MDICE/Scanner_information.htm

2562. RE: (CARMA) Weigh Scales on Starcom

Yahoo group: StarCom21
Date: 2008-05-10 03:17:13 UTC
From: Mike Curtis (KC)
Topic: 2562 Message: 2562

About 3 weeks ago the scales in D5 all came up doing radio checks and "emergency button" checks on 5A.

Radio IDs were

1372006 - SC6 (S/B I-55 at MM 265)

1372010 - SC10 (W/B I-80 at MM 147)

1372013 - SC13 (N/B I-57 at MM 330)

1372016 - SC16 (N/B I-55 at MM 267)

1372023 - SC23 (S/B I-57 at MM 330)

1372026 - SC26 (E/B I-80 at MM 143)

I caught some traffic on D2 Disp A today with a Sam Charles unit, but didn't catch the number nor see the radio ID so District 2's scales may be up on StarCom as well.

Don't mess with the store, call Radio Shack direct, and quote the fact
that you want it replaced. If its on a credit card then just file a
complaint with the card and try to get you money back, and this works.

This potentially could happen to any electronic device.
I would suggest that you visit that store that you bought it from and ask for the Store Manager at the store and explain the issue. I suspect you will get assistance.

You do know that the Radio Shack scanner is not fully Starcom compatible, right?

Radio shack is a reliable place for scanners at least. Most people do get their first few scanners there. It sounds to me like you just got a dud. It happens-it doesnt mean radio shack rips you off. Plus..... They make one of the best 800mhz antennas!!

2568. Starcom Programing trouble

Yahoo group: StarCom21
Date: 2008-05-11 01:53:20 UTC
From: rbotterbush@prodigy.net
Topic: 2568 Message: 2568

I have a Uniden BCD 396T. I have programmed the radio for the Madison County,Illinois area. I know the frequencies are in the scanner, but I can not hear a digital signal. My editting program asked for threashold number and a band plan number. I do not know what they are. Does any one have any ideas?. The VHF frequencies work just fine. I an only having trouble with the digital signal.

Thanks Ray

2572. TG 4001 - "Ida" Units Testing Emergency Button

Yahoo group: StarCom21
Date: 2008-05-16 02:43:03 UTC
From: Mike Curtis (KC)
Topic: 2572 Message: 2572

Driving through downtown Chicago today I caught some traffic between an "Ida" unit and an unknown dispatcher testing their emergency button on T115.

In the past coulpa weeks, I've seen affiliations between radios in the 400000 and 660000 range on T134 (Ottawa) on the following talkgroups -

4001

4002

4007

4010

4016

2573. St. Claire County (IL) tested Tyco radios.....

Yahoo group: StarCom21
Date: 2008-05-17 22:42:17 UTC
From: dcserkits
Topic: 2573 Message: 2573

St. Claire County (IL) tested Tyco radios on their P25 system which part of the STARCOM21 network in Illinois (see below).

I am disappointed that Norm's test failed when we had some measure of success in March with the brand-to-brand testing on the STARCOM21 system, in cooperation with several P25 vendors and DHS at the Tollway Authority Building in Downers Grove, IL.

As for the Tyco radios not working on STARCOM21, there can only be a few scenarios (maybe more):

* Motorola's infrastructure may not meet the published P25 standards.

* Tyco radios may not be following the published P25 standards.

* Motorola's LSM modulation does not play well on Tyco's receivers - keeping in mind LSM is not a P25 standard yet is being used on STARCOM21 as a vendor-specific option for many of its sites. WCQPSK is "supposed to be" the Tyco equivalent to LSM, so it was thought that it would not be a stretch for Tyco SUs to work on LSM infrastructure.

* Motorola may be using different "adjacent site" broadcast parameters (to facilitate roaming) than what might be expected on the Tyco subscriber units. This issue seems not to be resolved in the P25 standard.

* There may be enough subtle differences what is allowed in the P25 standard that Tyco could be "right", and Motorola could be "right", and two "rights" make a "wrong". In other words, the standard is so loose that manufacturers have the right to include brand-specific features that they are not compatible, yet both companies basically comply with P25.

Until the two companies (or better yet, the standard committees) sit down and have honest dialog and figure out how to play well in the Illinois (and P25) sandbox, I'm stumped, confused, and disappointed.

For the sake of argument, let's set aside all the contract language to achieve at least a "test case" in interoperability that includes roaming and simulcast waveform. This is where innovative departure from the standard becomes an impediment to interoperability. It has to stop.

This issue needs to be escalated up to the highest levels possible within both companies and P25 community. I have already expressed my concerns, prior to Norm's comments, with SAFECOM and DHS relative to

PSCI grants awards and brand-to-brand incompatibility within
publicized "standards-based interoperability" systems.

Steve Rauter
==========
From Illinois NENA Yahoo Group:

3. Testing of M/A-Com P7200 - 700/800MHz Project 25 Portable Radios
Date: Sat May 17, 2008 5:15 am ((PDT))

All:

As many of you know we, the St. Clair County ETSB staff was testing
the above radios on the St. Clair 700/800 MHz and Starcom 21 system.

Originally we were able to make a test call to David Tuttle who was
able to hear and respond to it on his Motorola ITTF radio. Following
this test the radios began to lose track of the system Control
channel making them inoperable on the system. Working with M/A-Com we
returned the radios and they installed upgraded software on them and
sent them back to us for testing. The testing of the radios with the
new software produced the same failures. In fact we were never able
to get the radios to operate long enough to conduct any meaningful
tests.

This week M/A-Com requested that we return the equipment which we did.
Testing has ceased. The testing of these radios revealed they would
not work on our system at this time.

We thank M/A-Com for allowing us to test the radios.

Norm Forshee

Per a TV news source in Peoria and a fellow CARMA member in McLean County, this search operation is likely an effort to find an 18 y/o man who went missing from the Lincoln area last Tuesday. Details can be found at http://www.week.com/news/local/18940974.html .

From: Mike Curtis (KC)
Topic: 2578 Message: 2583

Heard a radio test today between IEMA 24 and "Springfield" IDing this talkgroup as "IEMA 1". Still unknown how the rest of the talkgroups I've logged fit into the pattern (all have had radios with similar IDs affiliate to them) -

4001 - IEMA 1

4002

4007

4008

4010

4016

The Starcom PowerPoint available at http://www.mabasradio.org (StarCom21 and CARMA Yahoo groups are noted as sources of information) mentions a number of "new" statewide talkgroups coming (TRT, Haz-Mat, USAR, IMT, MABAS Admin) so I wonder if these are part of the new talkgroups being added?

Subject: [StarCom21] StarCom 21 TG 4001 used by IEMA?

A short while ago, I heard IEMA (IL Emergency Management Agency) unit 2-1 working "Springfield" on TG 4001 via site 115 (North Cook County). Unknown if this is a TG dedicated to IEMA or whether or not it is a "statewide" TG. Anyone else have notes on this TG that might help to clarify its use?

I had a lot of tfc on tg 4129 this weekend.
Don't have any record of tg 4127, typo?

Thanks,
George

I doubled-checked my Pro96com log and all the traffic I heard on
Sunday was on 4127. The log didn't have any hits all day on 4129,
but I didn't run Pro96com on Saturday or Monday.

2587. SC-21 SIte 108: Changes?

Yahoo group: StarCom21
Date: 2008-06-03 14:04:17 UTC
From: Jack Waterman
Topic: 2587 Message: 2587

Has something changed - primary CC maybe? - with the Lake County site (108)? Until a day or so ago I received lots of traffic. Now there's almost none. I noticed that line 3 of the display alternates between '855.2375' and 'NFM' between transmissions. Does this suggest something to anyone?
Thanks!

2590. WACN??

Yahoo group: StarCom21
Date: 2008-06-03 22:03:29 UTC
From: Jack Waterman
Topic: 2590 Message: 2590

So - I pressed the round 'Function' knob on my 996T to hold on my local StarCom-21 site (108). My display shows the following:
line 1: flashing 'F symbol' and HOLD with widely varying signal bars
line 2: the site ID I entered alternating with "WACN: BEE00"
line 3: 855.2375MHz [one of the control channels for this site from Rich's profile]
line 4: NFM -- This alternates occasionally with a programmed TGID, but NO audio

What the heck is WACN BEE00 ??

Should I not be hearing audio when a TGID shows up?

Any insights will be greatly appreciated!

2593. RE: [StarCom21] New Talkgroups? on Starcom

Yahoo group: StarCom21
Date: 2008-06-04 15:54:33 UTC
From: Curt Underwood
Topic: 2588 Message: 2593

I am apologizing in advance--why would any police or fire organization want to use Starcom for mission critical communications? Starcom and related systems have a place for routine day to day operations there is no doubt.

However--when a cop screams for help or a firefighter is in a basement with a wet plywood floor over his/her head and screams Mayday - do you honestly feel comfortable relying on a system that is affected by buildings, trees, leaves, or rain?

I just purchased 6 UHF T-band radios (470 MHz) with a 6 bay charger and 6 public safety mics for less than the price of 1 Starcom radio. And they work. And if they don't hit the repeater - the officer goes to channel 2 - and he talks dircetly to the officer in the front yard. No worry of encryption, channel, or other non simple issues.

I stand by my idea of issuing every police officer, firefighter, and EMA member a 10 channel 5 watt portable on VHF simplex that works on a non-rechargable battery the personnel keep with them 24/7. It will work everywhere. No repeater, no encryption, no dead battery. The radio is only used for critical incidents.

In the case of NYC 911, an incident commander presses a big red button at the command post which activates a pre-recorded tone and voice Mayday continuously on every channel every 2 minutes.

Use Starcom--just not for mission critical communications.

Curt

I don't think it's the foliage Ron. Site 102's Control Channel has
been flucuating quite a bit as of late. Tweaked a few settings to no
avail, so put everything back to where it was. I know someone on one of
the boards mentioned this is an issue with Simulcast sites, but can't
seem to find the post/thread.

2595. IL Task Force 1 / Drill on SC21

Yahoo group: StarCom21
Date: 2008-06-05 14:52:11 UTC
From: Kevin
Topic: 2595 Message: 2595

It is 9:30a on Thursday 6/5 and for the last hour or so I've been hearing radio traffic involving IL Task Force 1 (IL Urban Search and Rescue Task Force 1?) on Starcom 21 MABAS talkgroup 30330. Sounds like this is a (tornado scenario?) drill at or near an airport along Route 30. They indicated that this was in the Rock Island area, but from the cross streets mentioned it sounds more likely that they are at Aurora Municipal Airport in/near Sugar Grove.

There has been mention of simplex channels and setting up a repeater. I'm guessing UHF freqs either in the 406-420 MHz range or in business band range. Anyone close enough to do a little searching in these ranges?

Kevin

Extension of "Slow Growth")

Buildout Time)

To: Public Safety and Homeland Security Bureau, Federal Communications Commission

REQUEST FORWAIVER

OF THE

JUNE 3, 2008 DEADLINE FOR COMPLETION OF SLOWGROWTH BUILDOUT

The above-referenced licensee ("Licensee") requests a waiver of the Commission's requirement

for the Licensee to complete its buildout of the above referenced licenses by June 3, 2008.

Specifically, the Licensee requests until June 3, 2009 to complete its system buildout. The

public interest would be served by granting the requested waiver because it would allow Licensee to

continue its buildout of its 800 MHz Public Safety radio system in a reasonable, prudent and timely

manner, consistent with the goal of providing an interoperable Project 25 Land Mobile Radio system

serving multiple Public Safety disciplines and multiple municipal jurisdictions in St Clair County, IL. In

support of this Request for Waiver, the Licensee provides the attached Waiver Request Information Form

and the following explanation of the reason(s) for not completing construction by June 3, 2008, which is

consistent with the assertion that a grant of the waiver would serve the public interest.

Respectfully Submitted,

THE COUNTY OF SAINT CLAIR, ILLINOIS

Norman H. Forshee,

911 Director

2

Request for Waiver of the June 3, 2008 Deadline for Completion of Buildout

Licensee Name: St Clair, County of

Call Sign: WQAH919, WQAH920

3. Reasons For the Delay of Buildout.

The initial system slow growth time requested was for four years rather than the usual five years.

Since that time 50% of the allocated spectrum has been built out. County and Municipal budgets

and funding levels have not allowed as rapid an implementation as desired. Availability of funds

through the Public Safety Interoperable Communications (PSIC) Grant program should allow

construction and full system buildout to continue.

.

4. Steps Already Taken to Complete Buildout

The ten frequencies listed above, and six frequencies licensed under call signs WQAJ441 and

WQAJ442 are in service. This represents buildout of 50% of the requested trunking system

frequencies ahead of the projected schedule A total of 16 FB2 and paired MO frequencies

operational at 10 simulcast sites.

St Clair County is working closely with the State of Illinois, regional users and potential users in

the region, to implement a regional standards-based Project 25 interoperable communications

system, interfaced with the State of Illinois Starcom 21 system, the AmrenUE system, and City of

St Louis proposed Project 25 Radio system. The unconstructed spectrum is needed to

accommodate the additional traffic these regional affiliations will add to the St Clair County

system as these systems are built out and subscriber radios added.

5. Proposed Timetable - Infrastructure

It is planned to add one frequency pair at all 10 simulcast sites in 2008, as shown above, upon

receipt of Public Safety Interoperable Communications (PSIC) Grant

2598. FW: [BCD396T] Current 396 Prices

Subject: [BCD396T] Scanner Support

I recently had reason to contact the Customer Service Departments of both GREAmerica and Uniden. I sent each a similar question. I received two very different answers. The questions and the answers are included below (between the lines).

Question to Uniden Support:

Hello support,

I have a bcd996T scanner that I want to use in my vehicle. Next week I expect to have installed some new custom wiring for my vehicle. These will probably include several of the cig/outlet type/style outlets. I hope to power two(2) accessories from each of several new outlets using a radioshack power splitter/adapter. The technition doing the work needs to know the amperage(?) of the accessories so as to determine fuse sizing and wiring capacity. I know ~12 volts but this is not the number needed. If I could find this referenced in a manual, I would print it out. So far my searches have had no sucess. Maybe you can help me with the BCD996T specs.

Thanks,
Robin

Answer from Uniden:

Our Solution :
Thank you for using our system.

We do not have this information available as the scanner is only intended to be connected by itself with no other products so the amp rating should not be an issue with any standard car battery.

Sincerely,

You may respond to this message to update your question.
(PERSONAL DATA SNIPPED)
Product : Scanners
Model : BCD996T

Update Date : 05/27/2008 09:01 AM.

Question to GREAmerica:

Hello support,

I have a PSR-600 scanner that I want to use in my vehicle. Next week I expect to have installed some new custom wiring for my vehicle. These will probably include several of the cig/outlet type/style outlets. I hope to power two(2) accessories from each of several new outlets using a radioshack power splitter/adapter. The technition doing the work needs to know the amperage(?) of the accessories so as to determine fuse sizing and wiring capacity. I know ~12 volts but this is not the number needed. If I could find this referenced in a manual, I would print it out. So far my searches have had no sucess. Maybe you can help me with the PSR-600 specs.

Thanks,
Robin

Answer from GREAmerica:

Hi Robin,

I'm sorry that the owners manual doesn't supply this information. Looking at the power supply and fused cable that come with the radio, I found that the power supply is a 600 mA 12VDC supply, and the fused cable is equipped with a 1/2 A fuse. I suggest that you allow 1/2 A for the PSR-600. The lighter socket should be fused to handle all of the devices you plan to connect using splitters, and the individual cable from the lighter socket to the PSR-600 should have a 1/2 A or 1A fuse.

Best regards,

Jack

So did anyone catch any Starcom action during the large tornado last night? That cell initially started as a little rain here in Peoria and then blew up over Marshall County to the NE and was touch and lift all the way to Chicagoland.

At approx 3:45pm today, i heard two people talking on ID# 3. I received it on Site 115 N Cook.

i have no clue what agency this is. I know they were talking about vehicles though.

does anyone have any ideas?

ID3 are the Starcom techs, half was "ENC" and half the conversation in the clear...Some of there talk was VERY interesting about problems with the system and some sites taking lightning strikes.....There conversations are usually all "ENC"....I had 5 scanners going last evening listening to the tornado happenings just east of my town (Joliet)...Will Co, Will Co-EMA did a fantastic job of co-ordinating personel and setting up a command post...They called for "Air1" from Countryside PD to tour the worst damage while it was light out to help the most needy....The District 5 cars blocked I57 as three trucks and two large power grids came down across the highway...They used ID9013A, 9014B then called some District Chicago cars on ID9007 to stop traffic at I80-I57.....I thought evey one acted very professional except some area residents who proceded to "loot" some of the window-less stores.....Ron in Joliet

Speaking of the storm, I head a District 15 car on TG 9008 asisiting
District Chiago units down south. Apparently sent over from the
tollway to help out.

The techs sound like they can be anywhere...in the field or whatever, anywhere in the state. I had 3 scanners going during the storms. The Starcom system sounded great during the storms even though there have been times in the past couple months the simulcast sites would just go crazy during wind and rain. To the extend that even the end users were complaining. It was pretty interesting to hear units pop up in other areas than their own usual talkgroups.
As Ron commented, everyone on the radios...whether it was EDACS or Starcom in Will County and parts of COK County were very organized and professional.

I had just got into Lockport when a trooper on the Dist 6 Disp A reported some ugly stuff about 7 miles NW (I believe) of Pontiac. I think the TG was 13000?.... Then I switched on the 396 and followed Will County EDACS system...the various EOC TGs and Sheriffs east & west patrol. Then I turned on the Uniden 250 and switched that to Will County. Some I calls were definitely in provoice for EDACS that I caught on the GRE500. Obviously couldn't hear what was going on with that. District 5 and District Chicago South TG had a lot of the stuff for the I80 and I57 corridor. One smart thinking deputy rom Will County went to check a tower site. Power was down in that area and he got the generator up and working.....Very smart thinking from an obviously seasoned deputy. Starcom sounded really great on the GRE500. At one point the tornade went over and very near the Braidwood power plant and the cooling lake before it crossed Interstate 55. I wanted to post it at a
local group but, sadly, so many people post nonsense that the groups are moderated. No sense in posting stuff that will be an after account. For those like Ron in Joliet and myself, we caught the action live. Both State Troopers and Will County EMA agencies and Deputies were extremely calm and professional. A relative of mine was at Orland Square Mall in Orland Park, where they closed down the mall and had everyone go to the basement corridor. I got a phone call and was able to advise them that the tornado was in that general area to the south and that it was a real time event.

Yes, 5-22 was in command for the tornados- D15 sent 5 cars, D21 sent 2, and conservation sent 1.
5
D21 was 21-26 and 21-47
5-53, 56 and 57 were verrrrry active along I57 with traffic.

In the year since I bought mine, the price really hasn't come down much at all. I thought it would have by now.

Does anyone know if Uniden has any new scanners in the works? Maybe that will bring these prices down a bit.

Subject: [BCD396T] Current 396 Prices

Here is the June 7 updated price list for the BCD396T from eleven online vendors:

Bearcat1.com (Hobby Radio in Kettering, OH)
480.00 + 14.00 = 494.00

BearcatScanner.com (Sacramento, CA)
501.91 + 10.00 = 511.91

BTproductsInc.com (Gibsonville, NC)
494.00 = 18.50 = 512.50

ScannerMaster.com (Natik, MA)
499.95 + 13.23 = 513.18
NOTE: $10.00 off for a Father's Day special if you mention "tensca" to the salesperson.

ScannerWorld.com (Albany, NY)
499.99 + 13.75 = 513.74

SBHcorp.com (Brooklyn, NY)
499.00 + 15.00 = 514.00

Grove-Ent.com (Brasstown, NC)
499.95 + 16.95 = 516.90

BearcatWarehouse.com (Clarksville, MD)
495.90 + 21.05 = 516.95

HamStation.com (Evansville, IN)
499.00 + ?

Communications Electronics / usascan.com (Ann Arbor, MI)
519.95 (s&h incl.)

AdvancedSpecialties.net (Lodi, NJ)
518.97 = 6.99 = 525.96

HamRadio.com (Salem, NH)
396 ? 529.95 w/shipping

TheScannerOutlet.com (Holbrook, MA)
529.95 + 11.95 = 541.90

Universal-Radio.com (Reynoldsburg, OH)
396 ? 529.95 + 14.95 = 544.99

Doesn't really matter which groups but...I wasn't doing it as an incident notification....which is against the rules in most groups... just trying to share info and report which TG's and systems had the best activity going on for those who were trying to follow a very fast storm and the related activity.
Sadly, there are probably not than many scanner enthusiasts out south and so I guess another thing to consider is no one is really interested in the south burbs. I have a small network of friends out south so we exchanged e mails and instant messages.

From: Terry Weatherford, WX9SAR
Topic: 2611 Message: 2612

Not sure exactly where this is all going, BUT just wanted to speak up..

My groups.

ScanMetroStLouis
ScanMissouri
ScanIllinois
I-WARN
StarCom21
StarCom21-Users (this group HAS been started back up)

Are all moderated to start out with... Then when I have the time to notice that people are posting (good posts) a lot, I override the moderation for that person and allow.

I am always open to discussion (personally) about anyone that is moderated.

I may have missed someone or maybe I think there is a reason.

I hate putting groups in "Moderation Mode" - takes more of my time (and others)

I also have up to 5 other people on each group involved in moderating posts when I'm not home, although while mobile, I have my blackjack with me and I'll moderate from work too.

Any one interested in helping out, please let me know, I'll decide from there.

Help is appreciated.. But I don't like to have any flame wars, just like most group owners.

The time I have spent in my 35 years on scanning, yahoo groups, website maintenance and RadioReference.com is not worth the carelessness of one person that may help destroy my or my group's reputations.

Thanks!

Well, you have the right idea on NMO mounts. Location? Best is center of the roof for a single antenna. For multiple antennas try one centered on the roof, and others on the rear deck lid. Try to keep them at such a distance apart so as to not be multiples of a quarter wavelength apart if possible.

Not sure if that is the type of info you wanted on the NMO mounts or not. Sorry that I do not have the ability to program your radio.

It turned out to be a barricaded subject. OSC 1A seemed to have the most traffic (99% encrypted) with TRT 1C being used as well. D17 Dispatch A was on "restricted traffic" the whole time with the units on-scene interacting with the dispatcher so there was still a lot of listening to be had :)

Subject: [StarCom21] ISP OSC?

A lot of traffic going on at the moment on "ISP OSC 1A" (9096), along with "ISP TRT 1C" (9094), off of the Ottawa Tower (134). There are a bunch of ISP TRT units involved. Unfortunately all but one radio is encrypted, but I'm wondering what "OSC" stands for?

I missed what led up to this, but there are D17 units doing road blocks and questions about handling the media.

2622. IEMA confirmed on TG 4001

Yahoo group: StarCom21
Date: 2008-06-14 00:00:11 UTC
From: N2DUP@aol.com
Topic: 2622 Message: 2622

FYI ... IEMA is using STARCOM21 talkgroup 4001 as it sets up along the Mississippi River in Mercer County tonight. "IEMA 22" and "IEMA 17" have been heard coordinating the setup of the ITECS equipment being brought in for the flooding. In addition, "IEMA 21" has been heard calling "Springfield."

Most STARCOM21 lists I have seen leave question marks as to who is using TG 4001. I have confirmed it being used by IEMA.

I am hearing TG 4001 on the Joy (Mercer County) tower. Info on ITECS below from the IEMA web site:

Illinois Transportable Emergency Communications Systems (ITECS)
Illinois now has ten (10) Illinois Transportable Emergency Communications Systems (ITECS) around the state that can be taken to a disaster scene anywhere in the state and used to patch together the different radio frequencies used by various response agencies.

I've heard them call this "IEMA 1". I've also logged traffic from similar radio IDs on 4002, 4007, 4008, 4010, and 4016. I assume they're all IEMA channels.

Thanks for the reply. I believe you're correct. I "held" on the system for a while and "looking for control channel" came up many times. Now the mystery - the nearest tower for this simulcast site is ~5 miles away. Do you know if all sites are used at all times? I'm still confused by the abrupt change from "too much" traffic to "no" traffic.
I have all the listed freqs for this site programmed and 'CC Only' selected....

davidmc36 <davidmc36@...> wrote: I think I see that on mine when it has not locked onto the CC. Have
they changed the CC on that tower to something else and are using that
CC on another site that is on the fringe of your reception range? Do
you have any alternate CC's programmed in?

Topic: 2629 Message: 2630

Jack,

If you scroll through the control channels, you should be able to find the active one and the radio will decode the site ID and any groups it is transmitting. To do this, you need to scroll through the frequencies, not just the talk groups. If you can't find an active control channel, either the site is down, or you don't have it programmed into memory. They may have changed it. I haven't listened off of that site recently.

2633. What's Up with Site 108?

Yahoo group: StarCom21
Date: 2008-06-17 14:28:12 UTC
From: Jack Waterman
Topic: 2633 Message: 2633

I've posted several "help wanted" messages in these groups recently regarding my sudden inability to receive any SC-21 traffic, even though one tower of simulcast site 108 is ~5 miles away. Prior to this past weekend, I received so much traffic on this system that I actually locked some TGs out so the scanner would check other systems!

First - thanks for the replies with suggestions I received. I appreciate your time and input.

In the end, I apparently at least partially restored ability to receive in a sort of unorthodox way. I accessed the semi-covert settings that came with the last firmware upgrade for the BCD996T and reset "P25 Decode Delay" from 400 mS to 0 (zero) delay, and reset the "Digital AGC Response" from 0 to -8. Traffic levels (number and frequency of transmissions received) seem to be back to about what they were on this busy system. However, something's still not entirely back to normal as the display indicates that I'm briefly losing the Control Channel fairly regularly. Maybe I'll drive over to the tower that's 5 miles away and try out "close call...."

Another interesting note: one of the voice channels listed for my closest StarCom-21 site [868.9875] is also a Control Channel for the Michigan State system across Lake Michigan from my location (1/2 mile from the Illinois shore). I took that freq out of my SC-21 system because I was receiving Michigan traffic regularly. If I 'hold' on that frequency, the display clearly shows the system and site ID's for the Michigan system - but I still receive regular voice traffic on that frequency. I guess that means the StarCom-21 signal overrides the Michigan Control Channel??

Any further general thoughts and recommendations will be welcomed!

2634. TG 4015 IEMA

Yahoo group: StarCom21
Date: 2008-06-17 23:04:35 UTC
From: Terry Weatherford, WX9SAR
Topic: 2634 Message: 2634

From a radioreference.com database contribution:

TGID 4015 active at 1130 hrs on tower 221

IEMA giving a report regarding the earlier rescue activity after levee breach at Gulfport.

Also mentioned possible hazmat potential of railroad tankers in Gladstone & evacuation plans.

TGID 30321 was used to coordinate Henderson county SO, IDNR, & ISP during the rescue & evacuation.

Alarmed About Communication System

By Jeff Muniz

Story Published: Apr 28, 2008 at 5:01 PM CDT

Story Updated: Apr 28, 2008 at 6:46 PM CDT

When authorities in Bloomington/Normal respond to a shooting, they operate off different communication systems. Bloomington State Representative Dan Brady is concerned that different radio systems can create delays and other problems during serious situations.

Related Content

- StarCom21 Information (http://www.ileas.org/Current%20Programs/Radio_Programs/faq.htm)

- City of Bloomington (http://www.cityblm.org/)

Brady wants all McLean County first responders to be on the statewide StarCom 21 system.

"What I want to make sure is that after the tragic shootings at Northern Illinois University is that we have interoperable communications where all our departments and agencies can communicate," Brady says.

McLean County received state and federal funds to be a test site for the StarCom system. But, Bloomington police and fire do not use the StarCom network and prefer their current communication system.

Terry here is a website I am not sure if it is exactly what you are looking for hope it helps>>>>

http://www.batlabs.com/mcx1000.html

Programming the Radio Out of Band

If you want to program some out of band frequencies into your radio (may not work to well, but you can try), it is quite simple. All you have to do is:

load the saved file for your radio into the RSS
go and change the bandsplit (same place it will let you change the model)
program the out of band frequencies into the channels you want
go change the bandsplit back to the proper one
program the radio.
If you go and look at the channel(s) you changed while under the correct bandsplit, the software will have a fit and not display them, however, they are still there.

Early this afternoon on tower 107 in East Moline, heard helicopter Henry 9 on TG 30332 - ITTF I1 S/W in the air over the Quincy area checking on flooding in the area. At one time heard pilot communicating with a ground unit identifying itself as Dragon 6 (if I remember correctly.) Unknown if it was a base or mobile unit. Anyone know who that might be?

Jack,

It would really be in yours, and everyone's best interest, to check the profiles befoe asking the question of "Who is this?...." The answers are right at your fingertips 95% of the time. Over at CARMA Rich has consistently typed.."Check the profiles first..." Saves time and direct e mail space.

Here are great links for starters:

http://www.radioreference.com/apps/db/?sid=2324

http://www.carmachicago.com/profiles/index.html

Rich Carlson and Terry Weatherford spend countless, selfless hours updating all the information hobbyists share. You would have had the answer to this and some of your other questions in the past by simply looking it up.

Just throwing out a little "food for thought"....

I know that Quincy is in Adams County but, FWIW, ISP administrative units use an "Adam" radio prefix. Page 7 of CARMA's "State of Illinois Radio Operations" profile http://www.carmachicago.com/profiles/ILStateRadio.pdf shows a list of ISP alphanumeric identifiers.

2649. Reflections on TG 20

Yahoo group: StarCom21
Date: 2008-06-24 04:26:58 UTC
From: Brian
Topic: 2649 Message: 2649

Recently some group members heard testing on TG 20. I looked back in my notes from when techs were at Argonne, and ISP District 15/ITHA installing and testing radios and consoles and channel plan layouts. The techs were testing actual mobiles and portables for those users but the techs did all the testing on TG 1, 2, and 20 before doing something with the software to introduce the actual user TG's. The frequencies used for the actual tower sites were all the same but I notrd that the techs were actaully doing radio channel line ups with one tech TG but keying up on another tech TG for the actual test count and noting which mobile or portable had problems or was not working at all. They made it clear they were using actual portables or mobiles in the vehicles while the other tech sat somewhere with a computer and listening to traffic.
Based upon those 2 users test patterns it is very likely a new user may probably come on line soon and the techs are testing consoles, mobiles and portables....or....there may have been a problem with a console or tower and they are merely field testing the console or site. Based upon their test patterns I seriously doubt TG20 will be an actual Starcom21 user. I'd be very, very surprised if they did.

2655. 867.4875

Yahoo group: StarCom21
Date: 2008-06-24 13:06:31 UTC
From: Brian
Topic: 2655 Message: 2655

This morning I had major interference when 867.4875 was used as a VC (voice channel) on Stateville Coorectional Center's Moto Analog TRS. The interference sounded like a digital control channel or data channel stream. Completely overrode the analog transmission. This was on the GRE PSR500. I looked up the licenses and one is for State of Illinois...Starcom21 and the other State of Illinois Department of Corrections-Stateville. The interference was in the area of Northwest Homer Glen which has the new I355 south extension running right through it near Lockport.
An interesting aside. I also received Starcom21 District 15 trooper conversations bleeding over onto the Stateville/Starcom frequency 867.4875, in digital mode of course. As soon as the transmission ended the 500 went back to tracking the analog system. Never had that happen since I have had the GRE 500. I also know that Stateville is not transitioning to Starcom and has no plans for any digital radios in the FY2009 budget for that facility.
Question for the tech savvy....Could it be skip since there are only 700Mhz frequecnies used for Starcom in this affected area? The nearest site is Pontiac..... Or is it possible that 867.4875 may be a new frequency in use for a NE Illinois tower site in the south burbs?.....or something else?.....
Looks like it is a VC for site 144 (Whiteside) and site 207 (Pontiac), site 224 (Macomb), Site 319 (Herod), Site 338 (Pike),
But is a CC for site 236 in District 10 (Decatur South)
Anyone else notice this?.....

I started hearing 4199 last week on sites 220 & 145. Units were calling "Peoria 1". I later heard talk of energizing transformers & feeder lines going to a school. A few days ago I heard 1 unit trying to call another on 4199, 4200, 4202, 4208 & 4209. Some locations I've heard them reference were Brimfield, 150 and route 78, and the spoon river rest area. My hit counter shows 40 on 4199 and almost a dozen each on the other groups since last Fri.

I wonder if Ameren/Cilco is using the network now?

Well that blows away the statement someone made that no one but Police, Fire, or other related Emergency Services would be allowed to use the system. And would there be an explanation that the State of Illinois was going to have the say as to who could use the system ???
Just questions, but it now would seem that anyone that could prove the need can get on the system, if you want to PAY. Also is there another change out of radios,because of Freq. usage ????
Still no one going on the system around Pekin to the Havana area, other that a couple single use systems.

2670. St Clair voice distortion

Yahoo group: StarCom21

From: dakota19911524
Topic: 2670 Message: 2670

For those of you that monitor St Clair county, is there a trick to receiving better voice clarity? I'm monitoring their control channel (866.2250) and my radios (GRE-600 and Pro-2096) switch to the correct voice frequencies without any problem, but the voice is usually distorted and fades out quickly. I originally thought this was due to my distance, (I live a mile from the county line, but about 15 miles from the nearest tower), but when I took my scanner to St Clair yesterday, I had the same problem, even when using an antenna designed for 800 Mhz (it's the same one the state police uses on their cars). I've configured my scanner for both P25 auto and P25 manual as well as turning off various settings with no resolution.

I have no problems receiving ISP broadcasts over 700 Mhz freqencies, and I can also clearly receive Madison county on their 866.8625 control channel. The only one I have any problem with is St Clair. I've gone back to monitoring their VHF/UHF frequencies. Is there something special that needs to be done to receive St Clair that I'm not aware of? Is anyone else having problems monitoring this system?

Greetings Dakota,
Sounds like you are suffering the Simulcasting problem. Which
is quite common with the St Clair System.
What this means is that your radio is getting signals from one, two or
perhaps three other site's ; the RF energy
arrives in your radio at the same time. Unfortunately simulcasting
does not work too well if the signals from all of the
sites are arriving at nearly the same signal level. It works well
when the nearest tower is TOTALLY overpowering
and surpassing the signal levels of the other distant ones. The FM
capture effect helps this.

This is why I have so much trouble listening to the Jefferson County,
MO VHF Simulcasting radio system while
outside of Jefferson County. Here at my QTH, I do not get an
overpowering signal from any of the JEFFCO towers.

So the RF energy arrives in my radio from 2 or 3 Towers at the same
time, but at nearly the same signal level. The
result: SIGNAL CANCELLATION or severe distortion making listening
impossible or difficult.

For JEFFCO, I receive these towers:

- I-55 & Richardson Rd tower
- Gravois Rd & Schumacher Rd tower
- Hwy 21 & MM tower

All (3) towers are weak when they arrive at
my receiver near at Telegraph Rd & Ripa in
South St Louis County.
The result: Severe cancellation of the signal
Almost impossible to listen to reliably.
Having just one tower overwhelming the radio
with a powerful signal would fix this instantly.
A beam antenna would help me, and I do have plans
for that in the near future. JEFFCO still uses ANALOG.

The same thing occurs with the St Clair County 800Mhz TRS. They use
P-25 Digital Audio streams for its audio. So the importantance of
isolating the radio from receiving the other distant towers is so
critical. There are a couple of countermeasures you can
take to better your situation.

- Consider using the ATTENUATOR feature of the radio
- Use very low-gain antennas or perhaps unity-gain or
negative gain types
- Consider using indoor or in-car antennas rather than
outdoor or roof-top antennas.
- Or, place antenna outside, but below roof level.
- A combination of ATTENUATOR ON, low-gain/unity-gain antennas,
placement below roof level or placement of the antenna inside
your car to help isolate the antenna from receiving those
distant towers on the same frequency.

The Motorola trunk radios are specially designed to cancel out
the signals from the weaker distant towers that occupy the
same frequency. The CAPTURE effect is set higher on the
motorola radios then on our consumer-grade scanner radios.

Givin all things the same, as you move around in St Clair county your
radio will
get a good lock on a close tower. But if your antenna has TOO MUCH gain,
this can negative affect your radio by causing the distant towers to
interfere too
much with the nearby tower on the same frequency.

Personally, I recommend the COMET CH-32 stubby duck antenna or similar
antenna on a handheld radio. If you are on a mobile/base radio, use
an antenna that is located inside of your car for maximum protection
from the distant interfering towers.

With the St Clair P-25 digital audio system, reducing or eliminating
the signals from the distant towers on the same frequency is critical.
With JEFFCO, its easier because the system is ANALOG. But with
DIGITAL, you do NOT want anything to contaminate the digital data
stream regardless if its the DATA channel for the trunk system ; or if

its the data stream from the VOICE repeaters.

Hope this helps.

I have not experienced this at all.

I have a GRE-600 and have had no issues with the clarity of the reception from St. Clair county. I have more issues with ISP D11. And I have that group configured for only St. Clair county towers. The Scanner is mounted in my vehicle.

Are you including Site 359 for Simulcast?

Cris,

I'm not sure what you mean by "including 359 for Simulcast". Isn't site 359 using the 866.250 control channel? I seem to be having the same problem that Todd described (thanks, Todd for that very detailed explanation). I get near perfect reception on all other towers except for St. Clair. The only traffic I hear on the Madison site is the Madison county sheriff (Group 7315) and the IDOT motorist assist vehicles (Group 7776). Everything I receive on the St. Clair system (866.825 MHz) is usually badly distorted. If you're getting perfect reception driving around the county using the same scanner as what I have then can you share your configuration with me since I'm clearly doing something wrong.

As far as ISP, I recently did a scan starting at 764 and went to 868 MHz. I found lots of new control channels that weren't listed on the Radio Reference web site. I have site ID's from 140 (St. Clair & Madison counties) all the way through 14E (with some sites having multiple control channels). They must be in other counties since I can clearly receive not only D11, but also D13, D12, and D18 with some sites transmitting multiple districts (I assume these are sites that border neighboring districts). I simply put all of the control channels I found into a single entry (you can enter up to 32 frequencies) and set it to STAT. I did discover that we need to monitor all their control channels or else we'll miss a lot of traffic. I eventually went back and deleted some of the frequencies with weaker signals since they normally broadcast over at least 2 or 3 sites with every transmission. I receive ISP with perfect clarity. I was going to provide the new sites and their control channels to RR, but I don't know where they're located or know how to find them. The system is clearly growing quickly since the information on RR is outdated.

What I've found from searching is as follows: (some are listed in RR, some are not) and my scanner shows site ID's in Hex rather than decimal.
Site CC #1 CC #2 CC #3 CC #4
140 867.43750? 866.86250 (Madison) 866.2250 (St. Clair)
142 774.281250 774.278125 774.284375
144 765.853125 765.856250 774.343750 774.346875
145 867.95000
147 867.85000
148 866.85000 775.321875
149 866.93750
14A 796.821875 866.97500
14B 775.315625 775.318750
14C 866.92500

14D 765.965625 765.968750 774.53125 774.534375
14E 775.343750 775.346875

It's $30 but if you listen to just only Starcom this antenna is fantastic, (it has an SMA - so no adapter is need for a BNC antenna), The Radio Shack 800 MHz rubber duck is said to work well too but I have not tried it.

BNC Antenna: http://www.scannermaster.com/800MHz_SMA_Antenna_p/14-541014.htm

Curt

(I have no finacial interest in scanner master--but can vouch that they are a fine company--however they are a little pricey--but as they say--you get what you pay for.)

I have 2 of the Diamond's and they are great, they also have a swivel and rotate at the base. I use a disccone in my attic for VHF high band and UHF and it still overpowers my BC15, :-). The disccone is the Radio Shack one and I love it, and the wife nevers sees it :-), and there is no wind damage or lightning worries. I have heard a rumor that an antenna in an attic may still attrack lightning--but I am skeptical of that theory. I also use a 2 inch stubby rubber duck on a Nascar style Uniden portable at work for close range stuff which works OK, purchased from Scanner World for fire department VHFhigh band stuff.

Officials: Radio issues complicated response to State Farm incident
Normal police chief: Event 'an eye-opener' for Bloomington
By Sharon K. Wolfe

UPDATED 7 p.m. BLOOMINGTON -- Bloomington's police radio system made it hard for emergency agencies to coordinate the search for a potential gunman last week at State Farm's corporate headquarters, and local police officials called the incident "an eye-opener" for the city.

"Everybody else there could communicate with everyone else -- except Bloomington," said Normal Police Chief Kent Crutcher. "Anytime you've got agencies on different radio systems -- that creates an extra hurdle to overcome."

The radio compatibility issue dates back to 2006, when the city of Bloomington opened its own dispatch center after becoming dissatisfied with the countywide Metcom emergency dispatch system. The radios used by city police officers and firefighters don't work with Starcom 21, the radio system used by other McLean County emergency agencies and state police.

"We've known that for two years," said Crutcher. "We knew if a situation like this ever came up there would be problems. This will be an eye-opener for the decision makers in Bloomington."

Bloomington police spokesman Duane Moss, contacted late afternoon Wednesday, said department officials were making inquiries about the situation, but they needed to gather more information before making a public comment.

McLean County Sheriff Mike Emery said the McLean County Emergency Management Agency, which coordinated communications at the scene, got four spare portable Starcom 21 radios from his department and offered them to Bloomington police command staff.

"They basically refused to take them," said the sheriff, who was at the scene. He later said: "I would hope the (Bloomington) mayor and City Council would take a look at this and evaluate."

Crutcher said his officers at the scene told him a similar story. "I'm told radios were provided and refused -- which was unfortunate," Crutcher said.

McLean County EMA Director Curt Hawk declined comment Wednesday.

On Thursday, a passer-by reported seeing a man with a "long gun" outside the main State Farm Insurance Cos. building at Veterans Parkway and

Washington Street. The company sent about 2,000 employees to the lower level for almost two hours as a precaution.

About 100 police officers -- including about 50 Bloomington police officers -- and other emergency agency representatives cordoned off the building and searched. It later was determined the passer-by probably saw a custodian carrying a pipe or similar object.

One of Bloomington's major complaints with Metcom was radio reception. The sheriff and Normal police chief said they heard Bloomington's radios had trouble working in State Farm.

"I was told Bloomington radios didn't work in parts of the (State Farm) building -- the signals could not get out," Crutcher said.

Emery said his department went back Tuesday and tested Starcom 21 radios in multiple locations at State Farm. "The net result: Metcom got all signals loud and clear," he said.

The radio issue did not affect initial response of Bloomington police going into State Farm. The problem only developed when other police and emergency agencies arrived, the sheriff said.

State Farm officials previously praised who well the agencies responded and worked together at the scene. On Wednesday, they declined to comment on the radio issue, saying it was a police matter.

"Our position is this is a law enforcement issue that needs to be decided by law enforcement," said State Farm spokesman Fraser Engerman. "When police take control, they're the ones in charge. We felt cooperation and response by all agencies was superb."

Bloomington police officials began pushing for a city-only dispatch center in 2004, a move strongly opposed by the town of Normal and the county. City officials questioned how well Metcom handled 911 calls and dispatched emergency services.

The city's $2.2 million emergency dispatch center opened in May 2006 at police headquarters, a little over a year after the City Council voted to leave Metcom

I heard the UHF side:
-perimeter units were on 453.150
-ERU units were on 453.925 (entry team)
-regular dispatch was on 460.125

I didn't have the ability to listen to Starcom21 but I'd be curious what TG's were active on there.

State Farm has it's own unmonitorable digital system (NEXTEL or something similar).

Now take that one step further and visualize a shooter coming at you and you key your mic and just hear an out of service tone. Starcom should not be used as a mission critical means of communication!

Their radios might work, but I don't know how many times, that I heard Dist 19, and Dist 12 troopers say ....

I was secure, I couldn't get my radio to work it had me in trunking? Or one officer checks another and advises his radio isn't getting out at this location.

Its a sad system downstate.

2693. How do you prefer to abbreviate county names for Text Labels?

Yahoo group: StarCom21
Date: 2008-07-12 14:46:49 UTC
From: Terry Weatherford
Topic: 2693 Message: 2693

PLEASE discuss this topic on the message board at RR, link below.

http://www.radioreference.com/forums/showthread.php?t=112060

Asking for everyones opinion on what the preferred way to abbreviate on Text Labels (for imputing/importing to your scanner)

For example, StarCom21, we are using a 2 digit number to represent the county --- 59 is Madison County (59 is the SOS #, also on Sheriff License plates).

Should we continue with this and integrate it into non-SC21 labels or ??
/*The "RadioReference.com" preferred way is to NOT use numbers, as people traveling, etc, will have no clue, off hand, what county "64" is.*/
My most recent brainstorming came up with the idea, to create a 2 letter identifier, like the United States Postal Service is for the states. (Maybe this is already out there???)
Examples: CK=Cook, MC=Macoupin, SG=Sangamon*.... and so on. (There are a few issues with many counties beginning with the same letter, but that will work out on its own)

Please comment as you'd like and vote, using the Poll I have created.

NO shouting matches please......

2700. Major Changes (well, big) coming to RadioReference Database Pages

Yahoo group: StarCom21
Date: 2008-07-14 02:50:43 UTC
From: Terry Weatherford
Topic: 2700 Message: 2700

Simply put, by request of the owner/operator of RR, pages will be set up as follows.

The main County page, period, will include ALL public safety, municipalities, schools, hospitals.

The only "Agency" pages that will be listed on a separate page will be Businesses, Recreation & Attractions, Military, Federal and Air.

This means COOK County will be one HUGE long page. Sorry!
All that hard work down the drain.....

Also, across the board, will be eliminating frequencies like 155.37, 155.475, 155.73 (MO) in most agencies.

These are listed on the statewide page, and shouldn't need listed on county pages, even if licensed for them.
There will be exceptions to the rule.

So, if you have any direct links to any of the sub-agencies pages..... you may find them no longer working soon.

There will be other changes too, but probably minor.

Let me know if you have any questions.

I guess Ameren isn't fooling around with the conversion. I caught a conversation between a couple units on 4228 this morning that indicated the LaSalle office hadn't been converted to the "new radios" yet and they should use the "old system" to which the mobile unit indicated that "they took all of my old radios, portable and truck, and all I have is this". They're changing their unit identifiers too - from the "old numbers" to "new numbers" that appear to be the last 3 digits of their radio IDs (ID 651610, who used to be "Unit 384" is now "Unit 610")

Also found a early problem - two radios programmed with the same radio ID :)

On a side note, I've seen the following talkgroups at least affiliated to by Ameren units -

4199

4208

4213

4214

4228

4233

I don't know about the rest of the state for sure, but over here in Western IL, a lot of counties use two-letter IDers on sheriff dispatch channels for unit numbers, i.e.:

HE - Henderson
ME - Mercer
MC - McDonough
WR - Warren
HN - Hancock

etc.

From: Rich Carlson
Topic: 2693 Message: 2705

The state uses 4 digit abbreviations for several purposes, such as
LEADS conviction reports and DL abstracts. Whese are usually the first
4 letters of the county name, except when they would conflict (WILL is
Will County, WILM is Williamson)

Most people would not understand the 2 digit codes at a glance, 4
character codes would be easier to decipher quickly at a cost of 2
characters.

2706. New Frequencies for StarCom From Ameren

Yahoo group: StarCom21
Date: 2008-07-16 15:45:38 UTC
From: Mike Curtis (KC)
Topic: 2706 Message: 2706

Ameren cut over to StarCom here in LaSalle County a couple days ago and some of the Ameren frequencies are already popping up on StarCom. On T134 (Ottawa) the following frequencies have been added -

858.3375

860.8625

The CWID of WQIU454 was added to T134 as well. That license shows the following frequencies as part of it (and where they're licensed)

855.1625 (LaSalle and Champaign)

855.9375 (Silbey)

856.3375 (Danville)

857.3125 (Pontiac)

858.3375 (Ottawa and Silbey)

860.3125 (Silbey)

860.8625 (Ottawa)

I imagine other Ameren frequencies will be popping up on StarCom towers if they haven't already

2707. Re: [StarCom21] New Frequencies for StarCom From Ameren

Yahoo group: StarCom21
Date: 2008-07-16 16:37:10 UTC
From: Terry Weatherford, WX9SAR
Topic: 2706 Message: 2707

Well, that was the question i was just getting ready to ask...

Is Ameren going to have their own system (with their own system id) or TOTALLY be on the StarCom21 system.

I started building the new database entry and just moments ago, decided to stop because I felt that more that likely the Ameren frequencies were just going to be added to the existing StarCom21 sites.

I guess there will be no new system!

I'll work on adding the FCC Callsigns of Ameren to the SC21 sites (and the new frequencies)

Terry

But then I have a question of new frequencies at sites that don't exist
at SC21....

405 Palmyra (Macoupin) </apps/db/?action=siteInfo&siteId=13611>
856.33750 857.33750

2709. Ameren/SC21 Integration

Yahoo group: StarCom21
Date: 2008-07-16 19:31:28 UTC
From: Terry Weatherford
Topic: 2709 Message: 2709

OK, I've been working (hard) today.. .adding new frequencies (and call signs) to existing SC21 sites (and still working on it)

Some new Ameren licenses are sites that DO NOT exist on SC21.

These have been added with site numbers of 1000 and above.

The Site Name will have an [A] appended to it to show that it has Ameren frequencies.

Also, I'll be adding some of the rebanding SC21 licenses to those sites.

Those site names will be appended with an [R].

Once a site has changed to a rebanded control channel, the [R] will be changed to an [RC].

The sites will remain this way until all sites have been rebanded.

2710. StarCom Radio IDs

Yahoo group: StarCom21
Date: 2008-07-17 13:31:31 UTC
From: Mike Curtis (KC)
Topic: 2710 Message: 2710

Another little project of mine has been tagging radio IDs for StarCom radios (I work from home and my mind tends to wander a bit :)). The individual radio IDs I've identified are too numerous to list, but the generalized patterns of radio IDs may be of interest to some of you :) These are based on my own observations so feel free to correct me as necessary!

Where is lists mobiles and portables, it's been my general experience that the portable ID shares the same ending digits as the mobiles for at least ISP and DNR. Of course, your mileage may vary :)

101xx - ISTHA M1 units

102xx - ISTHA M2 units

103xx - ISTHA M3 units

104xx - ISTHA M4 units

105xx - ISTHA M5 units

106xx - ISTHA M6 units

107xx - ISTHA M7 units

108xx - ISTHA M8 units

111xx - ISTHA M11 units

112xx - ISTHA M12 units

114xx - ISTHA M14 units

15xxx - ISP D15 mobiles

16xxx - ISP D15 portables

18xxx - ISP D15/ISTHA dispatch

25xxx - St. Clair County

26xxx - St. Clair County

28xxx - Plainfield PD

29xxx - Ogle County

30xxx - Argonne Labs

31xxx - Lee County

35xxx - Secretary of State (north?)

36xxx - DuPage Water Commission

37xxx - Boone County

380xx - DNR "north" mobiles

385xx - DNR "north" portables

39xxx - MAAB Building Security

40xxx - DuPage Forest Preserve

42xxx - Henry County

360xxx - IDoT units (Dist Chicago)

400xxx - IEMA (north?)

411xxx - Dispatch centers/Health depts/EMAs/etc

412xxx - Dispatch centers/Health depts/EMAs/etc

413xxx - Dispatch centers/Health depts/EMAs/etc

414xxx - Dispatch centers/Health depts/EMAs/etc

415xxx - Dispatch centers/Health depts/EMAs/etc

416xxx - ISU PD

417xxx - Secretary of State (middle?)

418xxx - IMERT

65xxxx - Ameren

66xxxx - IEMA (middle?)

67xxxx - IL Commerce PD

6800xx - DNR "middle" mobiles

6805xx - DNR "middle" portables

702xxx - Secretary of State "south"

71xxxx - IL Commerce PD

7200xx - DNR "south" mobiles

7205xx - DNR "south" portables

740xxx - IEMA (south?)

758xxx - Ameren

100xxxx - ISP "north" mobiles

110xxxx - ISP "north" portables

13xxxxx - ISP "north" special units (Air, admin, weigh stations, etc)

140xxxx - ISP "north" motorcycles

180xxxx - ISP "north" backup dispatch radios

19ddxxx - ISP "north" dispatch centers (where 'dd' is the district number)

200xxxx - ISP "middle" mobiles

210xxxx - ISP "middle" portables

23xxxxx - ISP "middle" special units (Air, admin, weigh stations, etc)

240xxxx - ISP "middle" motorcycles

280xxxx - ISP "middle" backup dispatch radios

29ddxxx - ISP "middle" dispatch centers (where 'dd' is the district number)

300xxxx - ISP "south" mobiles

310xxxx - ISP "south" portables

33xxxxx - ISP "south" special units (Air, admin, weigh stations, etc)

340xxxx - ISP "south" motorcycles

380xxxx - ISP "south" backup dispatch radios

39ddxxx - ISP "south" dispatch centers (where 'dd' is the district number)

2711. FW: Unknown Talkgroups

Yahoo group: StarCom21
Date: 2008-07-17 12:37:56 UTC
From: Mike Curtis (KC)
Topic: 2711 Message: 2711

Been sifting through my Pro96Com data from the past year or so of logging StarCom on a regular basis (well sifting through the app I wrote to parse Pro96Com data) and came up with the following list of "unknown" talkgroups. Well, "untagged" might be more appropriate. The majority of these are in the CARMA profile and marked as "unknown" but there are some that aren't as well. I know we may never find out what some of the encrypted talkgroups are actually for, but as the usage of StarCom increases, maybe we can get more info on some of them :)

1030 - Ogle County units

1058 - Argonne Lab units

1232 - SoS PD Unit (2J14) (T111)

1235 - SoS PD Unit (T111)

1237 - SoS PD Units (T101, T102)

1238 - SoS PD Unit (T134)

1303 - (encrypted) 390000 series (T102)

1379 - Boone County

1380 - Boone County

1384 - Boone County

1385 - Boone County

1501 - (encrypted) ISP Unit A-62 / ISP Zone 1 'special' units 1350000 series

2003 - ISTHA unit MO-5 and ID 11800

2006 - ISTHA units and dispatch

2007 - Radio ID 10001

2010 - 12500 series

2029 - Mix of ISTHA radios and ISP D15 (T115)

2030 - (encrypted) 10000 series and 11000 series

2031 - (encrypted) ISP D15 units

2032 - 11000 series (T115)

2034

2038 - 10000 series and 11000 series (T101, T115, T126, T134)

2135 - ISP D15 units (T115, T134)

4002 - IEMA

4007 - IEMA

4008 - IEMA

4010 - IEMA

4011 - IEMA

4016 - IEMA

4101 - Radio ID 670002

4126 - DNR

4127 - DNR

4128 - DNR

4131 - DNR

4132 - DNR

4133 - DNR

4152 - (encrypted) Radio ID 390012 and 690001

4199 - Ameren

4208 - Ameren

4213 - Ameren

4214 - Ameren

4228 - Ameren

4229 - Ameren

4230 - Ameren

4231 - Ameren

4232 - Ameren

4552 - Radio ID 422275

7302

7404 - DNR

7406 - DNR (5F5)

7408 - DNR

9012 - ISP D Chicago unit

9103 - ISP Dispatch Joliet (patched)

9104 - ISP Dispatch LaSalle (patched)

9107 - ISP Dispatch LaSalle (patched)

9119 - (encrypted) 1I76, 1I89, other ISP Zone 1 portables (T108, T115)

9121

9124 - ISP Zone 1 portable (T111, T134)

9127 - ISP Zone 1 portable (T102)

9128 - (encrypted) ISP Zone 1 portables (T101, T126)

9129 - ISP Zone 1 portables (T101)

9130 - ISP Zone 1 portable (T134)

9131 - (encrypted) 1I61, 2I28, 2I55, other Zone 1 portables (T115, T134)

Another article about the issue:
http://www.pantagraph.com/articles/2008/07/17/news/doc487fa4f68751f027657171.txt

From what I personally heard, there were some comms on 453.925 that
the units inside State Farm couldn't hear from command staff outside.

Whats the big deal, with the big budget cut in Illinois, I think the
State should buy State Farm new SC21 radios, the truth being, we did
not need Motorola and SC21, to help wastes Illinois tax payers money.
Problem was ONLY, that it seemed no one used the "Interoperability
Radio System", then communications would have worked.

Another case of someone not knowing what they're talking about.
State Farm radios had NOTHING to do with the alleged commo problems.

That George is you not knowing what you are talking about, there is alot of difference between SCANNER NUTS and people that have more facts than you can guess. I ask you one question GEORGE, have you ever set foot in the STATE FARM Com Center, ?????? What is in the News Media, is not all that happens.
My point is that had it not happen at State Farm, there would be little or nothing done. So get your facts straigh, it is NOT the first time time this has happen.

neal,
The 396 has a 200 talk group per system limit. What you'll need to do is create several systems in order to cover all of the talk groups in Starcom21. I forget exactly how many talk groups Starcom21 has; it probably is many more than 400. I managed to get all the talk groups I found of potential interest to something less than 400 after poking around on RadioReference. Then I made two systems, loading about half of the talk groups into each to stay below the limit. I used the same towers/control channels for each system. Then I run both system at once, so can cover everything I need.

If you need more than 400 talkgroups, just keep building new systems of no more than 200 talkgroups like that (although you will eventually reach a global memory limit for the scanner, which I don't recall right now) and run then at the same time to cover what you need to monitor.

If this all sounds like gobblydegoop, then read the manual again and try to let go of the old way of thinking about banks of channels. It's a whole new ballgame with digital, including how you set up your scanner.

First, if you have a BCD396T you should be using ARC396, ARC996 is for the Uniden BCD996T,

Regardless, you can only have 200 talkgroups per system. I would suggest that you chose on;y the talkgroups for a specific area and go with them.

The CARMA 996 files are broken down into North, Central and South Zones, matching the StarCom Zones. You can do the same with a 396.

In addition, be sure to Search the trunked system instead of Scan, this will allow you to hear all the traffic, the talkgroups you don't have programmed will show up with just the number, no name.

In my opinion, you should create a different system for EACH
tower..... it seem that you will miss a lot if you program all the
control channels into 1 system and go from there.

I do run 1 system (in addition to all the individual ones) with all the
control channels, with a hold time of 6 seconds.

Then with each system (or each tower, you can more pin-point the
talkgroups to program into it) depending on where it is located.

I'm not sure who originally told me this.

But I've heard much more traffic since doing it this way.

I highly recommend using bctool (http://bctool.org/) for uploading
trunk system.

I do run 1 system (in addition to all the individual ones) with all the
control channels, with a hold time of 6 seconds.

Then with each system (or each tower, you can more pin-point the
talkgroups to program into it) depending on where it is located.

I'm not sure who originally told me this.

But I've heard much more traffic since doing it this way.

I highly recommend using bctool (http://bctool.org/) for uploading
trunk system.

2726. GRE 500 and StarCom ?

Yahoo group: StarCom21
Date: 2008-07-22 21:21:41 UTC
From: u2concerttrade
Topic: 2726 Message: 2726

Hi all,

I have a psr 500 and 600 and I have a question about the Star Com 21 system
here in Illinois. I'm using ARC 500 to program my scanners and I noticed I
can only enter 32 trunk frequencies. Star Com has almost 100 frequencies.
If I enter each tower separate there are over 600 talkgroups for each tower
and I use up all the room on my scanner. Is there any way to program more
than 32 frequencies for one group? Is there a better way to do this?
Thanks, any help would be great!

Paul

2727. RE: [StarCom21] GRE 500 and StarCom ?

Yahoo group: StarCom21
Date: 2008-07-23 01:47:54 UTC
From: Cris Hanna
Topic: 2726 Message: 2727

I had replied with the following in the PSR-500 yahoo group but it apparently has not posted yet:

If you have not downloaded the latest in depth manuals for both radios, you can get them here

http://www.greamerica.com/support/index.php?_m=downloads <http://www.greamerica.com/support/index.php?_m=downloads&_a=view&parentcategoryid=2&pcid=0&nav=0> &_a=view&parentcategoryid=2&pcid=0&nav=0

You can find out how to access the folders there.

With Arc500 you can setup 20 scan lists. Each scanlist can contain conventional and trunked objects if you wish. So maybe each list is a county, or a municipality or an ISP district.

ISP District 11, Collinsville, which serves the Metro East (side of the Mississippi from St Louis) is one of the more active districts and it only has 19 primary and alternate Control Channels

Have you subscribed to Radio Reference to import the control channels for what you want into the Software? It makes it so much easier and it's so up to date!

So lets say like me, I live and most travel in ISP District 11. This is a multi-county District like most. So I setup D11-St Clair County in one Scan List with all the control channels for just St. Clair County Towers, and D11 - Madison County in another scan list, Different sets of control channels, same talk groups. I have some stuff for St. Louis City in another scan list. My county sheriff which is on the Starcom system (sort of) in another scan list and so on. City of Belleville in another scan list and so on. And I save this file and call it home.

Then Occassionally I travel to Evansville, IN I want different stuff in this set of scan lists. I have to go through District 12 and 19 to get there, so I have all of D11 in one list, all of D12 in another, and District 19 in a 3rd. That still leaves me with 17 more scan lists for this file. So I have the Indiana SAFE-T 800Mhz APO system for the Indiana State Police Districts I'm going to travel through as well as some local stuff in a couple of other lists. And I save this scanner file with another name

Then using the Arc500 software you should be able to "upload" these virtual scanners (V-scanners) to your radio. You can have up to 20 files stored in the radio and with the push of a couple of buttons on your radio (hopefully

not while moving for safety's sake) you can switch from one file to the next

Hope that helps.

Cris Hanna

Why not just program the control channels (towers) near you and the
agencies (TGID) that use them. If you travel, setup multiple V-scanners
for the areas you need.

You can use PSREdit to autosave the active TGID's as they are found and
then you can tag them as needed.

Interesting.... FCC mod just adding mobile units to a 1 frequency "YX"
base in Mt Vernon, the associated call sign is an Ameren statewide
mobile license.
Also, see the special condition.

Not sure what this means at this point...

Terry

Topic: 2734 Message: 2735

Its rather simple how simulcasting works and is used.

For example down here in Southern IL not many PD's and Sheriff's Departments have Starcom21 or are going to starcom, so they don't have the receivers. Unless the they have the radios from ITTF. Either way, the local PD is not going to starcom 21 at least that I know of, so they don't have any way of monitoring the ISP like they used to via the old low band LF frequencies which are no longer in use, so if ISP simulcasts ISPERN on the Starcom21 and on the Old VHF towers (155.475) the locals can still hear traffic. I know that isn't the only simulcast, that was just an example of simulcast.

I would monitor the Dispatch A and the ISPERN talkgroups those usually have the weather alerts for watches and warning downstate anyways.

Mike

From: Terry Weatherford
Topic: 2734 Message: 2736

District 11 and 18 all Weather alerts are done on ISPERN on Sc21 and on 155.475. Simulcast "sites" are a different thing if that's what you are mean.

Subject: [StarCom21] Simulcasting Starcom

I just started listening to Starcom21 and am confused about simulcasting. I noticed North Cook South Cook and more do this. Can someone explain it to me what it dose for scaning listeners. One more question. Are there any talk groups used for weather alerts.

Topic: 2734 Message: 2737

There are two uses of the word Simulcasting here. In the Chicago, Peoria, Rockford and Metro East areas StarCom21 has sets of Simulcast towers. Each set shares the same frequencies, and each tower broadcasts the exact same radio traffic on the same freqs as the others in it's group.

The term is also used to describe the linking of a different radio system, usually a conventional channel, to StarCom21. ISPERN is simulcast by the ISP Districts on both the ISPERN frequency (155.475) and the ISPERN Talkgroup each district maintains on StarCom21. ISP Districts also simulcast occasionally on IREACH (155.0550)

In the Chicago area the North Cook and South Cook simulcast sets are joined by simulcast sites for Lake County, McHenry County, DuPage County, Kane County and Will County.

The CARMA StarCom21 Profile describes each Simulcast site, get it at http://www.carmachicago.com/profiles.

As for Weather Alerts, they are not directly assigned to StarCom21, but some districts simulcast weather alerts on the ISPERN takgroups as well as the ISPERN frequency itself.

2738. Starcom ISPERN Patch

Yahoo group: StarCom21
Date: 2008-08-03 18:27:03 UTC
From: Mike
Topic: 2738 Message: 2738

Anyone know what is going on in the Chester area? I heard talk on ISPERN about checking the debris that gets next to the barges. It is coming across both Dist 13, and Dist 12 ISPERN talkgroups. Sounds like they are looking for a vessel or debris from something. One officer told the other he couldn't see around the barge from the SUV, told the other which I am guessing was in a boat to go ahead and check around the barges.

Topic: 2739 Message: 2739

The new Starcom site on the water tower in PLFD seems to be active...Holding on T113 and PLFD-ID1001 in and around this water tower gives a very good steady CC signal on ID1001 but, when using the GRE500 on the Wildcard where it receives all ID's those other than PLFD ID1001 drop out??....Just my opinion.....Ron in Joliet

Your correct Mike, some days here in Joliet i can hear the towers in Ottawa, LaSalle, and Bureau Co...Its true because there CC shows up and its not the same as some in the Chicago area...I think its T105-Bureau that does use the same CC as T101-Dupage, it seems that i copy the Bureau one better using a outdoor antenna with lowloss coax...I guess this must confuse there radios but i would think the different "NAC" codes would help??....Ron in joliet

2744. SC21 vs Ameren

Yahoo group: StarCom21
Date: 2008-08-07 11:21:52 UTC
From: Terry Weatherford, WX9SAR
Topic: 2744 Message: 2744

Don't forget to check Ameren's current sites, that may fall in between SC21's coverage for possible new SC21 towers.

For Example, in Macoupin County, there are new licenses for
1312 Ameren - Mt Olive (Macoupin)
</apps/db/?action=siteInfo&siteId=13625> 855.38750

and
1002 Ameren - Palmyra (Macoupin)
</apps/db/?action=siteInfo&siteId=13622> 856.33750 857.33750

Currently, there is an 800 MHz site at Beaver Dam (Carlinville/Palmyra) but the northern and southern halves of the county are served by 700 mhz SC21 sites at Mt. Olive and Nilwood (Palmyra is about 15 miles West of the Nilwood Site).

At this time, as far as we know, Ameren can not legally use the 700 MHz towers or systems, according to the deal made with the FCC to share frequencies with SC21.

Now, we are wondering, in fact, if a single site can have a 700 mhz control channel with an 800 mhz voice (as are some of the new ones licensed by Ameren.)

It was meant that they can not be on the 700 Mhz side of the network.
So you will not hear any of their TGs on any 700 Mhz sites.

By the way, the "Palmyra" site is the same site as Nilwood, located
southwest of Nilwood, north of Carlinville on Route 4.
I have no idea why it was put under Palmyra.

The FCC rulings with Ameren/Motorola & 700 MHz sites have already been
discussed somewhere.

I could not find it in the archives.

2750. District 2, A vs. B

Yahoo group: StarCom21
Date: 2008-08-08 17:18:33 UTC
From: Jack Waterman
Topic: 2750 Message: 2750

Does anyone know how Elgin and/or District 2 units choose A or B for routine traffic? District Chicago B/C/D for North/Middle/South is clear but I can't discern a pattern for D2 dispatches.

2751. Re: [StarCom21] District 2, A vs. B

District 2 A is the old ³Low Band² and District 2 B is the old ³high band.²

Typically, the patrol troopers would be on Low Band (or in this case ³A²) for the patrols of I-290, I-355, Elgin-O¹Hare Exwy, and I-55. High band (or ³B²) is used for special patrols such as the Special Enforcement Team (SET) Geo-COM, or speed details.

So you are saying they use the old bands for their patrols and not Starcom?

Mike

From: Rich Carlson
Topic: 2750 Message: 2753

No, they just used StarCom21 "A" for what had been the assignments
that used the low band channel and "B" for what had been the High Band
channel use.

They got rid of the old Low Band gear and retained the High Band.
Occasionally they still pop up on High Band (154.695) for weigh
stations or if atrooper is in a dead spot.

2754. Re: [StarCom21] Re: District 2, A vs. B

Yahoo group: StarCom21
Date: 2008-08-08 19:56:07 UTC
From: Gregg Sperling
Topic: 2750 Message: 2754
Attachments: 1 described; binary payloads are missing from this source WARC

No. I am drawing an equivalent from their former use of the low/high bands
to what they are now on StarCom 21.

District 2 ³A² is what is being used now instead of their old ³Low band²
42.62/42.68
District 2 ³B² is what is being used now instead of their old ³High band²
154.695

Low Band was used for patrols on I-355, I-290, Elgin O¹Hare Exwy, and I-55.
High Band was used for administrative use (brass going 10-41/10-42)
conservation, SOS, and any special patrols.

Hope this clears up the confusion.

Gregg

2755. Base Radio IDs ---- [Fwd: (CARMA) 138thANG]

Yahoo group: StarCom21
Date: 2008-08-09 03:55:16 UTC
From: Terry Weatherford, WX9SAR
Topic: 2755 Message: 2755

Greetings,

Talked w/ a security guard from the base in Springfield the other day, he said the unit will leave in September. ie 138th Ang.

Heard another new member to Starcom: 7John 20 I assume he is S.O.S.

Also noted that on base radios the 3rd and 4th digit is the District number.

Example --- 3918101 is district 18, 3109202 would be district 9

edingirard

2756. 700 MHz SC21 sites ---- Re: [StarCom21] SC21 vs Ameren

Yahoo group: StarCom21
Date: 2008-08-09 08:02:23 UTC
From: Terry Weatherford, WX9SAR
Topic: 2744 Message: 2756

Additional updates:

Cass (Beardstown) is actually Cass (Bluff Springs) 700 MHz site

St. Clair (Mascoutah) is actually St. Clair (Fayetteville) 700 MHz site

Many of the other sites just had different city names and I incorporated them into the current SC21 site.

/By the way, this does take a lot of time and research.... We have to be thankful in this country that our FCC Database is open to the public AND on-online for FREE./

The remaining 800 mhz (Ameren) for 700 mhz (SC21) sites are:

1110 Ameren - Ford (Melvin-Sibley T110)
</apps/db/?action=siteInfo&siteId=13636> 855.93750 858.33750 860.31250
1117 Ameren - Henry (Kewanee T117)
</apps/db/?action=siteInfo&siteId=13635> 855.93750 856.33750

1209 Ameren - Cass (Bluff Springs T209)
</apps/db/?action=siteInfo&siteId=13626> 858.83750 860.83750 860.88750
1301 Ameren - St. Clair (Fayetteville T301)
</apps/db/?action=siteInfo&siteId=13620> 855.16250 859.33750

1312 Ameren - Macoupin (Mount Olive T312)
</apps/db/?action=siteInfo&siteId=13625> 855.38750
1321 Ameren - Johnson (Vienna/Grantsburg T321)
</apps/db/?action=siteInfo&siteId=13632> 860.88750
1324 Ameren - Macoupin (Nilwood T324)
</apps/db/?action=siteInfo&siteId=13622> 856.33750 857.33750

1325 Ameren - Madison (Edwardsville T325)
</apps/db/?action=siteInfo&siteId=13628> 860.33750

Sites from Amerens "Old/Current" 800 MHz Moto Type II
001 Fairview Heights (St. Clair)
</apps/db/?action=siteInfo&siteId=1056> 854.01250 855.38750 855.66250 856.33750 857.33750 858.33750 859.33750a 860.33750c
002 Waterloo (Monroe) </apps/db/?action=siteInfo&siteId=7586> 854.01250c 856.33750 857.33750 858.33750 859.33750 860.33750 860.96250c
003 Edwardsville (Madison) </apps/db/?action=siteInfo&siteId=6681> 855.38750a 856.33750 857.33750 858.33750 859.33750 860.33750 860.96250c

**860.3375 is the control channel at Fairview Heights now, possible voice at Edwardsville.

007 Mount Olive (Macoupin) </apps/db/?action=siteInfo&siteId=10051>
854.01250a 854.86250 855.73750c

**Does not match the new Mount Olive frequency

012 Kewanee (Henry) </apps/db/?action=siteInfo&siteId=1048>
855.93750 856.33750 857.33750a 858.31250c

**855.9375 does match current Kewanee frequency

No other new sites above have anything in common with Illinois Cooperative Assn/Cleartalk TRS that I can tell.

So, I've pretty much looked at all this stuff too much. Probably wasting a lot of time.
So it's your turn to figure out what is going on on your end.

ATTENTION: Those that are monitoring Ameren on SC21 now...
?) Are they still using Cleartalk or an Ameren system too? Abandoned ??

ST LOUIS AREA:
I'm wondering if Ameren has had any talks with St. Louis City on moving from their current EDACS systems over to working in/with the new St. Louis City Public Safety System (P25 Trunked) coming in a few months?????? (Currently StL city is on Moto Type II)

Enjoy!
Terry

2757. 700 MHz SC21 sites ---- Ameren

Yahoo group: StarCom21
Date: 2008-08-09 08:32:29 UTC
From: Terry Weatherford, WX9SAR
Topic: 2757 Message: 2757

Well, that last email didn't go through OR save correctly. Had to
re-edit...

Sorry, it was very hard to read.

/*Additional updates: */

Cass (Beardstown) is actually Cass (Bluff Springs) 700 MHz site

St. Clair (Mascoutah) is actually St. Clair (Fayetteville) 700 MHz site

Many of the other sites just had different city names and I incorporated
them into the current SC21 site.
/*
By the way, this does take a lot of time and research.... We have to be
thankful in this country that our FCC Database is open to the public AND
on-online for FREE.*/

The remaining 800 mhz (Ameren) with matching 700 mhz (SC21) sites are:

1110 Ameren - Ford (Melvin-Sibley T110)
</apps/db/?action=siteInfo&siteId=13636> 855.93750 858.33750
860.31250
1117 Ameren - Henry (Kewanee T117)
</apps/db/?action=siteInfo&siteId=13635> 855.93750 856.33750

1209 Ameren - Cass (Bluff Springs T209)
</apps/db/?action=siteInfo&siteId=13626> 858.83750 860.83750
860.88750
1301 Ameren - St. Clair (Fayetteville T301)
</apps/db/?action=siteInfo&siteId=13620> 855.16250 859.33750

1312 Ameren - Macoupin (Mount Olive T312)
</apps/db/?action=siteInfo&siteId=13625> 855.38750
1321 Ameren - Johnson (Vienna/Grantsburg T321)
</apps/db/?action=siteInfo&siteId=13632> 860.88750
1324 Ameren - Macoupin (Nilwood T324)
</apps/db/?action=siteInfo&siteId=13622> 856.33750 857.33750

1325 Ameren - Madison (Edwardsville T325)
</apps/db/?action=siteInfo&siteId=13628> 860.33750

*
Sites from Amerens "Old/Current" 800 MHz Moto Type II *
001 Fairview Heights (St. Clair)
</apps/db/?action=siteInfo&siteId=1056> 854.01250 855.38750 855.66250

856.33750 857.33750 858.33750 859.33750a 860.33750c
002 Waterloo (Monroe) </apps/db/?action=siteInfo&siteId=7586>
854.01250c 856.33750 857.33750
858.33750 859.33750 860.33750 860.96250c
003 Edwardsville (Madison) </apps/db/?action=siteInfo&siteId=6681>
855.38750a 856.33750 857.33750
858.33750 859.33750 860.33750 860.96250c

**860.3375 is the control channel at Fairview Heights now, possible
voice at Edwardsville.

007 Mount Olive (Macoupin) </apps/db/?action=siteInfo&siteId=10051>
854.01250a 854.86250 855.73750c

**Does not match the new Mount Olive frequency

012 Kewanee (Henry) </apps/db/?action=siteInfo&siteId=1048>
855.93750 856.33750 857.33750a 858.31250c

**855.9375 does match current Kewanee frequency

No other new sites above have anything in common with Illinois
Cooperative Assn/Cleartalk TRS that I can tell.

So, I've pretty much looked at all this stuff too much. Probably
wasting a lot of time. But, who knows?
So it's your turn to figure out what is going on on your end.

ATTENTION: Those that are monitoring Ameren on SC21 now...
?) Are they still using Cleartalk or an Ameren system too? Abandoned ??

ST LOUIS AREA:
I'm wondering if Ameren has had any talks with St. Louis City on moving
from their current EDACS systems over to working in/with the new St.
Louis City Public Safety System (P25 Trunked) coming in a few
months?????? (Currently StL city is on Moto Type II)

Current StarCom21 sites that have had Ameren frequencies (& Call signs)
added to them have [A] appended to the site name.
[A800] is noted on SC21 700 MHz sites that have a corresponding Ameren
license.

Enjoy!
Terry

2761. IDNR Repeaters 151.28/151.25/151.445

Yahoo group: StarCom21
Date: 2008-08-10 19:49:36 UTC
From: Terry Weatherford, WX9SAR
Topic: 2761 Message: 2761

Looking to see what IDNR (Conservation) repeaters are still in use.

Please state Location (with County), Frequency, PL out and PL input (if known)

151.28 123.0 PL out 110.9 PL in --- not real close to Glen Carbon (Madison)
151.28 151.4 PL out 210.7 PL in --- much closer to Glen Carbon (Madison)

I don't hear much on these anymore, but they are still on the air

Thanks!
Terry

2762. ISP Districts -- Locations/Coordinates

Yahoo group: StarCom21
Date: 2008-08-10 19:58:30 UTC
From: Terry Weatherford, WX9SAR
Topic: 2762 Message: 2762

Looking for ISP District "locations" given as such:

Coordinates (in the mode of 39.xxxxxx -85.xxxxx) and a mile radius that covers all counties.

This would be from the center of the district.

This is for assigning a location in the RadioReference Database.

2766. Ameren Talkgroups

Yahoo group: StarCom21
Date: 2008-08-12 16:39:32 UTC
From: Mike Curtis (KC)
Topic: 2766 Message: 2766

So far I'm seeing Ameren units on talkgroups from 4199 to 4354. I've logged the following talkgroups as having Ameren radios (Radio IDs 65xxxx) on them on T134 (Ottawa) and have narrowed down the usage on a couple of them -

4199

4208

4209 - Gas services Peoria

4212

4213

4214

4228 - Electric services LaSalle and Bureau counties

4229

4230

4231

4232

4233 - Gas services Putnam county

4234

4256

4276

4283

4284

4287

4289

4297

4302

4304

4305

4308

4309

4311

4333

4354

The local Ameren trunked site is still active with a control channel of 860.3125 and alternate of 859.3125 but I'm only picking up a single talkgroup with data bursts on it (2704).

From: Mike Curtis (KC)
Topic: 2766 Message: 2768

Correct on that - SysID 3529 Site 13. It also shows a neighbor site of Site 12 (Kewanee in Henry County).

Since sending the last e-mail, I have seen a couple affiliations on TGs 5264 and 5328 with data bursts on 2704 but according to traffic I've heard on the SC21 TGs, the "old radios were removed and portables taken away" so I'll keep looking at the system for awhile.

2769. Talkgroup ID's --- more questions

Yahoo group: StarCom21
Date: 2008-08-12 20:32:19 UTC
From: Terry Weatherford, WX9SAR
Topic: 2769 Message: 2769

OK, since we haven't had too many opinions about this so far, I would like to wait a little longer to figure this out.

I had also been thinking about the DMA Scanners and their ability to have the TalkGroup "Group" listed, which would display the city/county name in the "GROUP" and leave the TG ID to more accurately describing the talkgroup.

So, for example, instead of having:

7219

D

87-FH Emerg

Fairview Heights: Emergency Button Trigger (to FH PSAP)

Emergency Ops

7220

D

87-FH Police

Fairview Heights: Police - Dispatch (UHF Patch)

Law Dispatch

7221

D

87-FH Fire 4

Fairview Heights: Fire - Dispatch (& French Village; Patch w/ 154.415) [F-4]

Fire Dispatch

We could have: (under a "Fairview Heights" TalkGroup "Group")

7219

D

Emergency

Fairview Heights: Emergency Button Trigger (to FH PSAP)

Emergency Ops

7220

D

Police Disp

Fairview Heights: Police - Dispatch (UHF Patch)

Law Dispatch

7221

D

Fire Disptch

Fairview Heights: Fire - Dispatch (& French Village; Patch w/ 154.415) [F-4]

Fire Dispatch

Now, this also means, which I already began to test last week, having ALL the talkgroups in a "County" under one listing. This is how it was decided it would be done in the very early stages of creating the SC21 databse. It was also decided to use the county numbering scheme as it is now, just like the Indiana system is done.

NOW, if, for example I take St. Clair County, pull "Sheriff" out of it, for it's own TG Group, Fairview Heights out (already is), Ofallon out with its, then we are down to a lot of municipalities/agencies with only a few TG's each.... Do you leave these under a general "County" TalkGroup "Group" and get rid of the "87-" ???

I do think, no matter what we do, it is never going to fit everyone's ideas on what should be there.

I think all of us are anal enough about our scanners that we put what we want where we want and how we want.

I think we have to assume that a lot of this is done for the quick download and install in the radio by an inexperience user.

I am going to pull apart St Clair County and test a little for now.

Please tell me your opinions via YahooGroups or RadioReference.com thread http://www.radioreference.com/forums/showthread.php?t=112060

Thanks!

2770. Starcom Woes T359/ISP

Yahoo group: StarCom21
Date: 2008-08-12 22:27:39 UTC
From: Terry Weatherford, WX9SAR
Topic: 2770 Message: 2770

I've said before, that Starcom21, in my area, seems to work great most of the time.

There are some times when they have issues.

Today, the D11 dispatcher conversed with 2 units about issues.

TG17017, I heard on T323 E St. Louis

She told 2 different units to "Push the number 1 button on your control head and give me the site reading, it should be a 2 digit number"

They both replied with 59, which would be 359, St. Clair County Simulcast.

1 unit was 11-68, other I did not hear. From what I heard on T323, there was no problems with digitalization, but when giving traffic stop information, 11-68 literally just dropped right out in the middle of giving info and dispatcher noticed the same thing and the unit had to repeat.

What I still wonder, at times, is why the ISP show up so often on T359, when there are already at least 3 towers (actual SC owned) in the county (2 East St. Louis & Belleville)

I've still heard the ISP District 11 Mobile Extenders multiple time in Fairview Heights, while only hearing it a few times in the Glen Carbon area.

Just FYI...

Terry

2771. Re: [StarCom21] Talkgroup ID's --- more questions

For what its worth, I prefer a set of standardized abbreviations for different services. PD for Police Separtment. PW for public works, etc. Being from NW Illinois, I would have no idea what StkyTS is, but StookeyTwnshp is easier for me to figure out. Just come up with a standardized list of abbreviations for different services.

Hope this helps.

I do think, no matter what we do, it is never going to fit everyone's ideas on what should be there.

I think all of us are anal enough about our scanners that we put what we want where we want and how we want.

I think we have to assume that a lot of this is done for the quick download and install in the radio by an inexperience user.

I am going to pull apart St Clair County and test a little for now.

2773. Bloomington - Tests of new police radio patch will be conducted this week

Yahoo group: StarCom21

From the pantagraph.com

Tests of new police radio patch will be conducted this week
By M.K. Guetersloh
mkguetersloh@... <mailto:mkguetersloh@...>

BLOOMINGTON -- Tests of a new patch to bridge emergency radio communications between Bloomington police and officers from McLean County and Normal will be conducted this week.

Bloomington Police Chief Roger Aikin said there is a patch to connect the two radio systems, but he rated its reliability as about a five on a scale of 10.

The patch allows Bloomington officers, who use the city's analog radio system, to talk directly to sheriff's deputies and Normal police officers. McLean County and Normal use Starcom 21, a digital system.

Aikin said a radio system vendor will be here Thursday to demonstrate a new radio patching system.

"They are telling me it is a nine or a 10 (on a scale of 10)," Aikin said.

Aikin and Bloomington Fire Chief Keith Ranney addressed questions by the Bloomington City Council about the condition of the city's emergency services radios during a work session Monday.

A false alarm about a gun scare July 3 at State Farm Insurance Cos. headquarters prompted discussion between the three police agencies about the ability to communicate with each other.

Bloomington, McLean County and Normal are working on solving some of the operational differences so better emergency response plans can be in place, said Ranney, who is in charge of the city's disaster planning.

Ranney said there are advantages and disadvantages to each system.

"We are not here to claim my system is better than yours," Ranney said. "We need to acknowledge we have different systems and coordinate a way to resolve those problems."

Aikin said the Federal Communication Commission will require analog radio users to be re-licensed in 2013, but it will not force the city to give up its current system.

In a McLean County justice committee meeting earlier this month, committee Chairman Tari Renner said those changes will make it more difficult for a community to remain on an analog system.

Bloomington purchased its analog system, which went online in 2002, when officers and firefighters complained about reception on an E.F. Johnson system, which was a digital system.

At the time, Normal also switched to an analog system but still had their old analog equipment to use, Aikin said.

As a side benefit to the communications discussion, Aikin said the police department has been working with State Farm to better develop a plan for responding to emergencies. Aikin said Country Financial also have been in talks with police.

Retirement rumors

During a separate council discussion about an ordinance change allowing police and fire chiefs to hire outside the department for assistant police chiefs and deputy fire chiefs, the issue of Aikin and Ranney's retirements were brought up.

After the meeting Aikin and Ranney said they have no plans to retire anytime soon. They are subject to the rules of the police and fire pensions respectively and do not qualify for the early retirement program currently offered by the city.

Aikin will reach 30 years of service with the city in October while Ranney will reach his 30 years in April.

2774. Re: [StarCom21] Talkgroup ID's --- more questions

For what its worth, I prefer a set of standardized abbreviations for different services. PD for Police Separtment. PW for public works, etc. Being from NW Illinois, I would have no idea what StkyTS is, but StookeyTwnshp is easier for me to figure out. Just come up with a standardized list of abbreviations for different services.

Hope this helps.

"Terry Weatherford, WX9SAR" <TerryWeatherford. WX9SAR@scanil. com> wrote:

OK, since we haven't had too many opinions about this so far, I would like to wait a little longer to figure this out.

I had also been thinking about the DMA Scanners and their ability to have the TalkGroup "Group" listed, which would display the city/county name in the "GROUP" and leave the TG ID to more accurately describing the talkgroup.

So, for example, instead of having:

7219

D
87-FH Emerg
Fairview Heights: Emergency Button Trigger (to FH PSAP)
Emergency Ops

7220

D
87-FH Police
Fairview Heights: Police - Dispatch (UHF Patch)
Law Dispatch

7221

D
87-FH Fire 4
Fairview Heights: Fire - Dispatch (& French Village; Patch w/ 154.415) [F-4]
Fire Dispatch

We could have: (under a "Fairview Heights" TalkGroup "Group")

7219

D
Emergency
Fairview Heights: Emergency Button Trigger (to FH PSAP)
Emergency Ops

7220

D
Police Disp
Fairview Heights: Police - Dispatch (UHF Patch)
Law Dispatch

7221

D
Fire Disptch
Fairview Heights: Fire - Dispatch (& French Village; Patch w/ 154.415) [F-4]
Fire Dispatch

Now, this also means, which I already began to test last week, having ALL the talkgroups in a "County" under one listing. This is how it was decided it would be done in the very early stages of creating the SC21 databse. It was also decided to use the county numbering scheme as it is now, just like the Indiana system is done.

NOW, if, for example I take St. Clair County, pull "Sheriff" out of it, for it's own TG Group, Fairview Heights out (already is), Ofallon out with its, then we are down to a lot of municipalities/ agencies with only a few TG's each.... Do you leave these under a general "County" TalkGroup "Group" and get rid of the "87-" ???

that's probably up to the radio techs. I just went ahead and added them all as a new system to find out when it happens. can't imagine how many radios will have to be programmed. Assuming they'll have old and new in them for a while. i'd think that ISP radios will need it to to be able to use the site.

2780. Here's a good one

Yahoo group: StarCom21
Date: 2008-08-18 05:44:28 UTC
From: mvhyden61
Topic: 2780 Message: 2780

I live in the Quad Cities and take my 396T just about every where I go. Tonight I was on the way home from work and stopped at Taco Bell in Moline. I had the radio searching through two custom search ranges I have set up for Starcom21. I was about a mile away from tower 127 in Moline when the scanner stopped on 867.0625. After a couple of seconds the display showed it was stopped on T127. I quickly checked the control channel frequency I have programmed for the T127 system and found that signal still active and was not the same frequency. As I drove East away from Taco Bell, the signal faded and the radio resumed searching. After getting home, I checked Radio Reference and it didn't have 867.0625 listed for T127. In fact, there is no sign of that frequency throughout Starcom. Any comments or explanations?

As A side note to this the PSR's will only allow 32 control channels,
this helps but You willl still have to split it up

Too close to the site, I have seen ghosts of control channels when close to regular motorola or edacs systems. Usually happens within a mile of the site.

Too close to a transmitter site might be front end overload. Next time add attenuation and see if the problem goes away....

Would I be correct in stating that some of the Scanner user forget that all of the SC21 Motorola radios are using both encode and decode, set up for areas that they are in, so thus they will not hear adjacent towers, and no intermod problems, that is if they are working and setup correctly.

2786. Recommendations on PSR500 Setup

Yahoo group: StarCom21
Date: 2008-08-18 20:45:01 UTC
From: tgbrengel
Topic: 2786 Message: 2786

Hello group. I've had the GRE PSR 500 for several months now and have had just the Lake County Simulcast set up StarCom21 to monitor Dist 2, Chicago, and 15. I also listen to NWCD and Lake County Sherriff (mainly monitor priority channels only). However, I would like to set the radio up to be able to listen to StarCom only when I am out of the Lake County Simulcast range. I'm used to conventional scanning so I had the radio set up with different banks for each ISP district, NWCD, and LCS. How would you recommend setting up the radio to listen to ISP when I'm out of Lake County Range? I'm thinking of removing conventional banks and replacing them with Simulcast sites for McHenry, Dupage, N & S cook. This is how I'm currently set up:

01 ISP DIST 15
02 ISP DIST 2
03 ISP DIST CHICAGO
04 ITHA & MAINT
05 LAKE COUNTY SHRF
06 NWCD
07 NWCD MISC / FD
08 ILL STATE MISC
09 STARCOM 21 MISC
10 STARCOM21 MISC 2
11 VHF FIRE
12 VHF POLICE
13 UHF POLICE
14 LC VHF
15 LC SHRF OPS
16 LC SHRF EMGNCY
17 LC GOV
18 LC SHRF MISC
19 MUTUAL AID 1
20 MUTUAL AID 2

2787. Re: (CARMA) SC21 site 207 / AMEREN IP Bloomington site

Date: 2008-08-19 01:56:46 UTC
From: Terry Weatherford, WX9SAR
Topic: 2787 Message: 2787

Ok, so fixed the database. I left in 867.48750, but noted it is not in use.

I added the new Ameren license a few weeks ago, but somehow left out the
new frequency.

Neighboring sites are the same as already listed.

Thanks
Terry

From: Jason Webb TW-005-FL
Topic: 2786 Message: 2788

I am from out of the area, I travel Illinois alot, I uploaded 3 files
with all the ISP zones for the state, Each TSYS object is based on
the sites within an ISP District.

I Travel I-80 and I-70 extensively so i may just set up those areas
but i am pulling my hair out trying to figure out a better way of
Organizing the radio.

You can use this file as one of Your V Scanner folders or create a
custom one, then it is a simple act of pressing FUNC+PGM then
selecting the V Scanner folder You want to use.

so you could have one v folder for where you live and one for where
you travel to.

The PSR is extremely efficient at monitoring StarCom21, especially
with the Multisite Roam feature, but you can only place 32 control
channels in a TSYS object, I would hope this could be increased.

Hope some of this helps,

Jason W KJ4AQT

Jason

Just for grins, I began looking at this. I have the 600 mounted in my vehicle

I took the ISP district map and began looking at options which allow for some overlap in what I consider (others may not) a logical grouping of ISP posts

It would take up 13 of the 20 scan lists in main memory to do all of IL SP

Now you might want to set up a VScanner for just I-70 (which is only two ISP posts (D11 and D12) And the county Freqs as well.

Set up another for just I-80 (D7, D1, D2, D15, DChicago) and any county or other systems of interest

If anyone is interested in seeing the grouping I came up with, I'll be happy to post

Cris Hanna

The map I used was found at:

http://wcilscanner.home.insightbb.com/ISPmap.htm

Don't know where you might be starting from, but here would be my thoughts
(and in no particular order)

ScanList 1 SL2 SL3 SL4 SL5

DChicago D2 D1 D5 D7

D2 D16 D16 D17 D1

D15 D1 D7 D6 D17

D5 D5 D17 D21 D8

D17 D2 D14

ScanList 6 SL7 SL8 SL9 SL10

D14 D8 D10 D12 D22

D7 D9 D21 D10 D13

D8 D7 D6 D18 D19

D20 D14 D12 D11

D9 D6 D9 D13

D19

ScanList 11 SL12 SL13 SL14 (I-70) SL 15 (I -
80)

D11 D13 D9 D11
D7

D13 D11 D18 D12
D1

D18 D19 D10
D2

D12 D22 D6
D15

D12 D14
Dist Chicago

D20

This leaves you 5 more scan lists PLUS the Favorites and the Skywarn ScanList.

And this is just one VFolder

Hope you find this helpful

Jason
Just for grins, I began looking at this. I have the 600 mounted in my vehicle

I took the ISP district map and began looking at options which allow for some overlap in what I consider (others may not) a logical grouping of ISP posts

It would take up 13 of the 20 scan lists in main memory to do all of IL SP

Now you might want to set up a VScanner for just I-70 (which is only two ISP posts (D11 and D12) And the county Freqs as well.
Set up another for just I-80 (D7, D1, D2, D15, DChicago) and any county or other systems of interest

If anyone is interested in seeing the grouping I came up with, I'll be happy to post

To: StarCom21@yahoogrou ps.com
Subject: [StarCom21] Re: Recommendations on PSR500 Setup

I am from out of the area, I travel Illinois alot, I uploaded 3 files
with all the ISP zones for the state, Each TSYS object is based on
the sites within an ISP District.

I Travel I-80 and I-70 extensively so i may just set up those areas
but i am pulling my hair out trying to figure out a better way of
Organizing the radio.

You can use this file as one of Your V Scanner folders or create a
custom one, then it is a simple act of pressing FUNC+PGM then
selecting the V Scanner folder You want to use.

so you could have one v folder for where you live and one for where
you travel to.

The PSR is extremely efficient at monitoring StarCom21, especially
with the Multisite Roam feature, but you can only place 32 control
channels in a TSYS object, I would hope this could be increased.

Hope some of this helps,

2795. RE: [StarCom21] Re: Recommendations on PSR500 Setup

Yahoo group: StarCom21
Date: 2008-08-20 16:08:08 UTC
From: Mike Curtis (KC)
Topic: 2786 Message: 2795

Just to update your list a bit, D15 and the related ISTHA groups (the tollways) run through the following counties/districts -

Lee (D1)

Ogle (D1)

DeKalb (D2)

DuPage (D2)

Kane (D2)

Lake (D2)

McHenry (D2)

Cook (D Chicago)

Will (D5)

Boone (D16)

Winnebago (D16)

The map you have is a bit off - DuPage County is in District 2, not District 15, but D15 does go through it. The map in the CARMA profile (http://carmachicago.com/profiles/StarCom21.pdf) is a bit more accurate. I think your list matches what's been my observation ... "In general", you'll hear traffic from the ISP districts that "touch" the district you're currently in (depending on who's affiliated with which tower).

I hate to give out too much info... But on SC21, TG 7320...

I've been hearing comms regarding "Surveillance Team" on "Chain" ---- all i'm going to say is the are they are at is just south of I-270 at Route 3, north of Granite City IL.

Talking about their "UC" Undercover?????

They are obviously watching some people. Using First names to communicate with others.

This is possibly a Madison County Sheriff talkgroup..... but comm's I'm hearing SHOULD be encrypted.

**previous operations i've heard on this TG have been some kind of ops in Collinsville, and also heard the Mad Co Sheriff Dispatcher giving 10-28 info to a unit.

A new antenna has been added to simulcast T113 on a water tower in PLFD, i don't think they have it really tuned well in the simulcast system, in Plainfield proper i hear Plainfield PD ID1001 much better but when you get away from PLFD T113 looses its CC frequently ending in my Uniden396 saying "Finding Control Channel"....I think the geographic location of T113 is in a hole....T101,102,126 and 125 are much better....Ron in Joliet...My Opinion in My Location

2801. [Fwd: Uniden Scanner Firmware Update Info]

Updates are On the Way

In This Issue

* Rebanding Update

* Update Schedule

* What's Next?

* Until Next Time

Rebanding Update

Well, a couple of Motorola Analog systems have now rebanded, so we are hard at work on firmware updates for all our current Trunk Trackers (as well as a couple of older models). These updates will give you the ability to enter custom band plans for 800 MHz Motorola systems, which will allow you to set up the scanner for rebanded systems, whether they are "normal" rebanded systems as are the few that have recently switched over, or "inverted" rebanded systems which use a variation of the channel assignment method. So far, no systems have switched to the inverted type, but we'll be ready when they do.

I know that many of you have wanted more features in the current models. So, we are also taking this opportunity to put a few more treats into this update. Here's a quick rundown of the new goodies:

*Hidden **Me**nu Items:* These will all be incorporated into the main menu structure. No more keyboard tricks to get to these tweaks. (BCD996T/BCD396T)

*Close Call DND: *I sure wish I had thought of this mode earlier so that we could have included it in the BC246T, BR330T, and BCD396T, but this update takes care of that.

Extended Tone-Out Delay: We're adding the much-requested 30-second option to the Fire Tone-Out Delay feature (BR330T, BCD396T, BCT15, BCD996T)

RSSI Reporting Improvements: I've been very surprised that none of the software developers have taken advantage of the improvements in RSSI reporting (high speed, 1024 levels of RSSI), but I am hearing some hints

that updates are on the way. This would make for a pretty slick band scope feature, and we added it to the PC protocol for the BCD396T and BCD996T with a previous update. This update will extend it to the BC246T, BR330T, and BCT15.

*EDACS ESK **Support**: *We'll be adding ESK support to both the BCD396T and the BCD996T. Sorry, no ProVoice (or OpenSky, V-SELP, iDEN...).

*Improved P25 Automatic Threshold Detection: *This update should allow the BCD396T and BCD996T to fully auto-adjust for P25 systems, even if those systems are out of spec for P25 deviation, as we've found is the case in a number of areas.

Now for the 2^nd big question. How much is it going to cost you? Well, while we'll still need to use ESN control for this update for some models, this update will cost you absolutely nothing (well, a little time, perhaps, and a little patience).

Update Schedule

Now to answer the 1^st big question: When will all this happen?

Since we'll be working on updates for 9 models, we can't get these all out at the same time. So, we'll be issuing updates with a goal of wrapping all this up by early 2009. Our estimated release dates for these updates (remember, we still have to recode, debug, test, and package all this, so it is possible for an update to slip a bit if we need time to address problems found in testing) are as follows:

BCD396T/BCD996T

9/30/2008

BC246T/BCT15

11/20/2008

BCT8/BC898T

12/31/2008

BC296D/BC796D/BR330T

1/31/2009

What's Next?

Watch your in box for a major announcement on 9/29/2008. Can't say more, now.

Until Next Time

In closing, I want to recognize the great contributions Gene Costin (aka Gene Hughes) made to the scanning hobby. His long-running "Police Call"

series made it possible for scanner hobbyists to program their scanners with local law enforcement frequencies long before the internet ... or even the widespread use of trunked systems. Our thoughts and prayers go out to his family and friends. His spirit lives on every time you help out a fellow "scannist." No manufacturer would last in this business without the kind of community help and support that he epitomized.

Terry,

Well how about that!

Great news for Uniden owners.

Looking forward to the updates.

No, but it sounds good.
My understanding is many streams are going to the simulcast site at once. The scanner gets confused by that overload, lack of decipher, decode, etc.. In reading this release I feel all too confident that it will not cure our simulcast woes.....although you never know what might happen by accident!

We tend to forget that Scanners are not Radios, thus scanner users have problems, but a big RED Rose to Uniden for advancing the scanner systems, something is better than nothing!

2806. RE: [StarCom21] Re: [Fwd: Uniden Scanner Firmware Update Info]

Yahoo group: StarCom21
Date: 2008-08-26 13:40:16 UTC
From: Cris Hanna
Topic: 2801 Message: 2806

And I'm not looking to start a brand vs brand flame thread, and in the interest of full disclosure I own a GRE PSR 600, but GRE has released several DSP and CPU updates for their scanners and that line of scanners has been around much less time than the Unidens. Given the history of Uniden in the scanner market, they seem to be lagging in providing updates for the scanners

Subject: Re: [StarCom21] Re: [Fwd: Uniden Scanner Firmware Update Info]

We tend to forget that Scanners are not Radios, thus scanner users have problems, but a big RED Rose to Uniden for advancing the scanner systems, something is better than nothing!

No, but it sounds good.

My understanding is many streams are going to the simulcast site at once. The scanner gets confused by that overload, lack of decipher, decode, etc.. In reading this release I feel all too confident that it will not cure our simulcast woes.......although you never know what might happen by accident!

I guess i'll be the first to ask...what does this mean for those monitoring Starcom simulcast sites? "Improved P25 Automatic Threshold Detection".. .will this be the magic bullet so to speak?

Topic: 2801 Message: 2807

Right...can I add the word.."meaningful" updates.
I own more Unidens than GRE's so I am not choosing sides. But, if you are in the Chicago Metro Area and try listening to Starcom on those simulcast sites....which are very prevalent here, then you'd understand. The 396 misses some parts of dialogue or entire transmissions all together and the signal strength bar pulses like mad. People have been bring that up a while...I'll stay focused on Starcom instead of other 396 fixes that should be a priority since this is the Starcom group.
We know these aren't radios and the manufaturers have made great strides in my lifetime, but, when GRE can keep building and updating and Uniden has had a long tme to research issues and mend them, in my book it can be discussed. Not blaming. Not threatening to never buy again. Not selling. Just simple dialogue. We have e mailed Uniden, we have posted here and at Radio reference and other places but no one ever says, "Hey we are working on that issue." I'm not even sure Uniden CAN fix that, but we can talk about it. No one has forgotten what Uniden has done for the hobby. My 396 still is on at least 3 hours a day on Starcom...whether I know I'll hear everything or not.
With those Starcom simulcast sites sometimes that something is NOTHING.

2808. "I Ida" codes

Yahoo group: StarCom21
Date: 2008-08-26 16:42:45 UTC
From: tgbrengel
Topic: 2808 Message: 2808

Been listining to ISP for a while but not sure what the different "I Ida" codes are. I think Ida9520 is a truck inspection, but that's about it. Dist.15 seems to use these alot. Does anyone have a list of these different codes? Thanks!

2810. Uniden Updates

Yahoo group: StarCom21
Date: 2008-08-26 19:56:30 UTC
From: dataman60435
Topic: 2491 Message: 2810

I like my Uniden 396 BUT, i agree with Cris and Brian, every update lately from a leader like Uniden has not proved itself in all areas so which one really works...Plus you have to go to "yahoo group unidenflash" to beg your case after you get your scanner "registered", and get assigned another "update" if the one you just did does not work in your area...I own many Uniden scanners and really like them but now with GRE really on the band-wagon atleast there "firmware revisions" do what is advertised....My Opinion Only....Ron in Joliet

2811. Starcom Secure?

From: Mike
Topic: 2811 Message: 2811

I think ISP actually thinks that their traffic is not receivable?
Maybe?

I just heard Attention Dist 13 Platoon members, you will be conducting
a LIDAR on XXX XXXX at MP XXXX at XX:XX PM, per Sgt XXXXXXXXXX

I think they really think that no one can hear this stuff!

It would have been just as simple to send out an IWIN message to
everyone so when they logged on to their terminals for the day they
would have seen the message.

Also on the note of IWIN. Has anyone seen the motorcycle officers?
Do they have laptops or anything on the bikes? I heard an officer ask
for a CAD number or that just so when they write the ticket they can
add the CAD number to the ticket?

I have seen the motorcycle police around and they do not have laptops
mounted on their bikes. I do know, however, that they have laptops
they carry in their sacks.

IDOT, IEMA, and many other state agencies are still operating on the old HF 40MHZ frequencies. I have seen no indication of them moving anytime soon, nor have I seen any discussions about it. IDOT I thought might a few years ago they started implementing new technology at least in this District, where they installed an individual radio identifier, so when each radio transmits it shows on the console which unit it is coming from. Which why would they spend that money knowing that Starcom was coming? I would say the system they have is adequate for what they do. Now IEMA on the other hand I would see on Starcom, they need communications across the whole state.

Although I have heard more and more on Starcom lately a trooper overdue for status says, he had to go back to the car because his portable won't transmit, or saying if you don't get me call my on my cell, my mobile isn't working and I don't know if my portable will either.

Hearing "real time" talk on SC21 TG 7025 (instead of 155.28 141.3 R4 Hospital Disaster Net) of how many people area hospitals can take. This sounds just like the drill's that they do weekly, but is REAL)

St. Louis Hospitals Turn Into Haz Mat Scenes

Hazmat Situation at St. Antohny's Hospital

(KSDK) -- The emergency rooms at St. Anthony's Hospital in south St. Louis County and SSM DePaul Health Center in north St. Louis County shut down Saturday some patients arrived after being exposed to a dangerous chemical.

Three people went to St. Anthony's with serious health problems caused by the chemical p-nitroaniline. They were apparently exposed to the chemical at an East St. Louis company.

One of those patients at St. Anthony's is said to have serious respiratory problems.

Haz mat officials say 25 people were in the emergency room at St. Anthony's at the time. The emergency room is no longer on lock down but it will not be accepting any new patients for most of the night.

Experts say p-nitroaniline can cause headache, drowsiness, shortness of breath, and nausea. Exposure can lead to bluish finernails, lips and ears. The chemical is used in dyes, antioxidants, pharmaceuticals, gasoline and more.

The emergency rooms will remain on lock down throughout the decontamination process.
KSDK
DePaul, St. Anthony's emergency rooms are closed (http://www.stltoday.com/stltoday/news/stories.nsf/stlouiscitycounty/story/BA4E88ADF4A4969D862574B50075B4B7?OpenDocument)

ST. LOUIS POST-DISPATCH

08/30/2008

Authorities this afternoon closed emergency rooms at St. Anthony’s Medical Center in South County and at DePaul Health Center in Bridgeton after several people entered the hospitals after being exposed to a white powdery substance, according to health and fire officials.

The powder is believed to be a hazardous material that the individulals were exposed to in East St. Louis, said Jim Silvernail, chief of the Mehlville Fire Protection District.

The three people who entered St. Anthony's ER arrived together and had respiratory problems, Silvernail said. Fire crews are trying to identify the substance. About 20 who were exposed to the three are under quarantine. .

At DePaul, where at least one individual exposed to the substance entered the emergency department, the Pattonville Fire District has brought in its portable decontamination unit to the hospital, said Jamie Newell, hospital spokeswoman.

For a while, patients at St. Anthony's weren't allowed in or out. Brian Ricker of St. Peters was visiting his brother-in-law when he was told not to leave.

"We didn't know if it was a bomb. We didn't know if it was chemical. We didn't know exactly what was going on," he said.

Other hospitals in the area have been contacted and told to watch for similar symptoms. East St. Louis fire officials have a hazmat team at 8th and Market streets, where they're investigating a chemical incident. The incident is related to the four who are hospitalized, a dispatcher said.

IDoT here in Ottawa is still on low band. Up in Chicago, IDoT uses VHF and UHF but some trucks have StarCom radios in them and communicate directly with the Dist Chicago cars on Car-to-Car (Radios in the 360xxx series).

To follow up on the other post, IEMA has been active on StarCom used it extensively during the flood ops on the Mississippi River earlier this year. They have a series of talkgroups in the 4000 - 4016 range and you can often hear units interacting with "IEMA Springfield" on "IEMA 1" which is talkgroup 4001.

IDOT EPV (Emergency Patrol Vehicles) are the only known to be on SC21 at this time. (District 11 -- Metro East St Louis area)

IDOT District 8 - Collinsville Talkgroups
EPV = Emergency Patrol Vehicle, patrols and is dispatched to Motorist Assists on I-255, I-270, I-55, I-70 and I-64 on the Illinois side of the river. Dispatch is "Collinsville", they have a 4 channel radio but does not scan at this time? only can monitor dispatch channel.

EPV Radio Channels
1) D8 EPV 2) D8 INC 1 3)D8 INC2. Also installed are D11-A, D11-B. D11 ISPERN, D-11 I-REACH, SC Cnty Call, SC Commn1, IFERN, SC SOA 1,2,3 & SC I-REACH. (St Clair County TG\'s)

I have seen several motorcycle units on the tollways in the Chicago
area. Their computer is located in a compartment behind their seat.
It is not accessible unless the trooper stands next to the motorcycle.

Actually unit shift assignments have always been given over the radio.
Often times traffic details are given at the beginning of the shift
when the roll call is announced on air.

Starcom 21/pro96com

I would appreciate current pro96com tower info files for the following sites.
325
323
353
305
359
358

The files in the groups file section are several years old.

Scott AFB
Does anyone monitor the trunk system at Scott AFB on a regular basis? Would you provide freqs, and bandplan please. Radioreference has two different bandplans listed.

Please and Thank You,

George

2822. Membership / Email Addresses

Yahoo group: StarCom21
Date: 2008-09-01 19:04:57 UTC
From: Terry Weatherford, WX9SAR
Topic: 2822 Message: 2822

Starting today... membership to this yahoogroup (and maybe others) will be changed to "must be approved by moderator"

I do have one other question though.....

There is an option in Group Settings to -----

Email Address Display:

Members of your group may not hide their email address.
You can view their email address on member listings.
Their address will be displayed on the messages they post.

Email Address Display:

Allow members to hide their email address from the group.
Your group will not be able to use the Polls feature. Members who hide their email address will not be able to post messages via email. Once you have selected this option, you may not change it later.

Does HAVING out email addressed SHOWN help anything at all?

It would have to cut down on spam if they were not shown?

Would it be a problem on being able to contact others directly????

Would people more in the public eye/public service/radio technicians be more apt to join when they can hide behind a yahoo ID?

Please let me know directly, try to keep any of the replies OFF of the yahoogroup, no flame wars.

tweatherford@...

Thanks
Terry

2823. GROUPLY SPAM / HIJACKING SERVICES

Yahoo group: StarCom21

From: Mike
Topic: 2823 Message: 2823

Passing along a post about Hijacking of Yahoo accounts, Please be careful!

---------- - - - - - - - - - - - - - -

Here is a moderator's note from another list I am on.
I hope nobody on this list bit on this bit of spam.

have been alerted to a problem that so far has eluded us, but has been seen on other YahooGroups.

An email organization known as "Grouply" asks that you join, and use then their service to
better track all your various YahooGroups memberships - like an RSS fed thing I presume.

To join Grouply, you register with them by giving them your Yahoo ID and password. Bad idea. Once they have your ID and password, they hijack your account and send emails to your groups asking more folks to join Grouply. For a moderator of a list, they could conceivably take control of your list and do with it as they will.

Any sign of 'grouply" activity on these lists will be dealt with by immediate banning of the
poster, since their account will already have been compromised.

I have checked this out on several inquiries, and have found that this is an identity stealing organization. Please do not respond to anything you might receive from anyone requesting you "join" grouply.com. If you do, delete them immediately from your email address book and take steps to further increase the security on your Yahoo ID account, like changing your password.

If you have any questions about the further dangers of this problem, you can email directly off list.

I added the 300 series sites from a June 2008 trip:
http://groups.yahoo.com/group/StarCom21/files/PRO96COM/300-Series/300SeriesTowers_June2008.zip

301
311
313
325
327
328
330
331
333
346
349
350
354
358
359

Some sites I let Pro96com run for hours while others just a few minutes to obtain the control and alternate freqs as well as the adjacent site information.

2825. 996 scanner

Yahoo group: StarCom21
Date: 2008-09-02 15:11:11 UTC
From: Ron H.
Topic: 2825 Message: 2825

Is there other software other than ARC pro to load data files to the scanner ???
Anyone have data files in the there 996, in the central to south Illinois that would send there file to me, thus saving much time in loading a new scanner, as I can see it taking alot of time to set up a new scanner. Nope do not care what you have in yours, will take anything, just trying to get a short cut to getting it up and running, then I can play from there.
Just asking, thanks Ron H.

The free software you get from Uniden (UASD) works just fine with this radio - it's what I used with all of my 996s. I don't have any files for the central or south parts of the state, but you may want to check the Files section of this group or of the CARMA group or ScanIllinois group to see if there's some pre-made ones there :)

2829. Dist 2 Testing Emergency Buttons

Yahoo group: StarCom21
Date: 2008-09-02 19:08:57 UTC
From: tgbrengel
Topic: 2829 Message: 2829

District 2 is testing their emergency butons on Dispatch A right now. I'm curious as to how their emergency buttons works, it seems to send out a blank transmition for several seconds. Does Dist 2 receive an alert on their terminals? At work, our emergency buttons will send an alert at dispatch and continue to "key up" until the radio is turned off and back on.

Because I live 5 miles from the base and am retired military and spend a reasonable amount of time out there, I can tell you with certainty that the VHF trunked P25 system is actually the only system.

As indicated, some of the VHF talkgroups, such as Fire Depart are also rebroadcast on talkgroups which are part of St Clair County's 700/800Mhz P25 System. There are, I'm sure other things being done for interoperability during special events such as the air shows. Etc.

Based on my monitoring the 138 plan is still the active plan

I simply did the import from what's in RR and I hear fire, security, rampnet, etc.

Because I live 5 miles from the base and am retired military and spend a reasonable amount of time out there, I can tell you with certainty that the VHF trunked P25 system is actually the only system.

As indicated, some of the VHF talkgroups, such as Fire Depart are also rebroadcast on talkgroups which are part of St Clair County's 700/800Mhz P25 System. There are, I'm sure other things being done for interoperability during special events such as the air shows. Etc.

Cris,
Thanks, yes I know RR has that info. But like I said RR has two different bandplans listed. I was just wanting to know which one worked.
Thanks,
George

2836. stl city p-25 no linkage to sc21

Yahoo group: StarCom21
Date: 2008-09-03 16:07:51 UTC
From: Todd Hartzel
Topic: 2836 Message: 2836

Greetings all,
Not sure if stl city p-25 digital system can be linked into SC21. Here is stl city's p-25 digital specs:

SysID: 01ce or system: 1ce
Tower#: 201
WACN: BEE00

Rest of the info can be found in my pro96com file posted on the pro96com yahoogroup file section. Though, it is only from this morning when Dist 3 went live-on-air with the system on talkgroup 10003. Rest of the P-25 digital talkgroups will come alive over the next week thru Sept 9th, 2008.

I guess the SysID: 1ce or 01ce could be the Missouri state SysID code as: 140 or 0140 is for SC21. Its showing as: Tower 201, so I guess there are going to eventually be towers 1-200 too.

I checked my 996, I have been using the 138 bandplan too and it works fine. I pick up the system from home and on road/at work in Fairview heights. It seems to track the system just fine. I have received nearly all the TG listed plus found a new one last week during a drill or airshow ops. I have to say though, I find the system completely uninteresting to listen to. I basically monitor now to find new TG or identify others.

2840. ITTF MABAS

Yahoo group: StarCom21
Date: 2008-09-03 19:14:40 UTC
From: Mike
Topic: 2840 Message: 2840

I heard a discussion for what sounded like a MABAS deployment to the GULF region is my only guess.

Sounded like this.

Dispatch from 500 (Effingham FD Chief), I have divisions when you are ready, he gave several divisions, then said I have a District Chief's cell number and gave it. The dispatch repeated it, and then said something about Effingham. The Chief then responded that they would be making a trip slower than last time due to high winds and heavy rains.

I've been hearing this all morning as well - At least 5 convoys of equipment leaving from a staging area in Effingham en-route to Louisiana. It sounds like Effingham 500 is coordinating it in conjunction with RED Center.

According to this article, 250 firefighters, 30 engines, 20 water tenders, and 15 rescues are part of this MABAS deployment -

Ok, what bandplan are you using?
RR has the following,

Base Spacing Offset
137 12.5 460

138.1375 12.5 551

Thanks,
George

No No Cris,
I'm not arguing that fact, I just trying to get the correct
base, step, and offset, the "bandplan."

Thanks for all your help!!

Why not just get a nationwide license? I wonder what frequencies they will be using down there Mutual Aid or what?

How does Starcom Help when you get outside help or your are outside helpding something else? Did they think more states would jump on board the interop stuff?

I saw a neat ad the other day in EMS or JEMS magazine for a portable radio, looks like a brick, it has 136-869 MHz they are calling ALL bands.

136-174 , 380-520, 700, 800.
P25, Conventional and Trunked Analog, Encryption with DES, AES, OTAR

Says equal in size and weight to single band portable.

Here is the link. http://www.thalesliberty.com/

Unless the FCC rules have changed, in event of an emergency agency's
are ok to take there sytem where ever and use it.
Nation wide would be more of a mess than what there is now, while
other states have systems that are like SC21, it requires an inter
operability link to make it work. If you look closely you will see
that there are frequencys that are the same in most states, no not
700-800mhz. Also MABAS (Fire) is one that also works in other states,
just need to know the IC freq. These are in the VHF high band plan.
Keep in mind that SC21 can only handle so much radios traffic and
then it will crash, just like the Cel Phone system does, and has.
Ireach and Ispren are 2 that I can talk to other agencies in IN, KY,
OH, and Iowa, so SC21 is not needed. in that respect, geesh, don't
give Motorola any more ideas.
Just info, and not trying to shoot anyone down!

Ron,

I am an Iowa guy, and I don't know who you would talk to in Iowa on IREACH. There is someone in Johnson county who uses that frequency for a data link, and a few other users, but not many.

In Iowa ISPERN is called Mutual Aid and is monitored by small town police, and county S.O.s base and mobile. Also by all state law enforcement agencies mobile, but not in the com centers. The larger PDs have it in their stations, but they often tend to turn down aid and what is called LEA because they have so many local channels or talk groups to handle. Few large ciy PDs have it in squads. The ones who do usually have them in supervisors or traffic cars.

In Iowa ambulances are routinely on aid, but in Illinois the ambulances cannot use ISPERN. They have IREACH, and a special half duplex channel to the state police com centers. The ambulance transmits, and the State Police receive on 155.3400 with a special PL. (225.7 I think. I'd have to check for sure) The ambulance receives, and the State Police transmit on 155.4600 their old statewide HF-4 statewide channel.

Even with Starcom 21 the Ambulance - State Police channel is still functioning as of when I used it last which was a couple of weeks ago.

Just FYI, in Missouri the 155.4750 Channel is also called aid, and operated in a manner very similar to the way Iowa does.

2851. Sc21's Error Correction Rate in the p25 voice stream

Yahoo group: StarCom21
Date: 2008-09-04 19:29:17 UTC
From: Todd Hartzel
Topic: 2851 Message: 2851

Greetings all,
I was wondering if anyone knows what the
Error Correction rate is for SC21?

Or FEC = Forward Error Correction ?

I ask this question, because anyone near St Louis, MO
knows that T359 has a differant sound when listening
to the raw signal of the data channel and voice
repeaters and to the other SC21 sites around St Louis.
I have always wondered why when listening with p25
mode disabled on my radio that the p25 data channel
and p25 voice repeater that the data sound itself
actually sounds differant on t359, then it is on
t305, t323, t353 & t358.

Anyone that watches that Azcar Training channel on
transponder 11779 on the Galaxy 25 satellite may
know what Error Correction is with references to
FEC on dvb-s.

My guess with t359 is that it is using a more intensive
setting or more Error Correction. The differance in
pitch and sound of t359 compared to the other local
towers around St Louis is distinct. T359 uses
simulcasting, and my guess is that they use more
Error Correction than any of the other surrounding towers.

Anyone know what the Error Correction Rate is of T359, and
perhaps EC rate of the rest of the SC21 network?

2853. EMS/ISP 155.35/155.46 ---- (was Re: [StarCom21] Re: ITTF MABAS)

Yahoo group: StarCom21
Date: 2008-09-04 23:39:52 UTC
From: Terry Weatherford, WX9SAR
Topic: 2840 Message: 2853

So all...

I've seen this 155.46/155.34 Ambulance/ISP combo on lists for years....
(and the Carma State Profile)

I've never heard it in use and thought it was a very unusual set-up.

But, it actually sounds like a neat idea.

Around here.... not many ambulances contact D-11 HQ, but a few do on
I-REACH 155.055

I'd like to know where in Illinois, this has been heard in use and if
others know if it is 225.7 PL.

Thanks!
Terry

(by the way, maybe? all this is a little off topic for the SC21 group?)

2854. Ireach 155.055, not ISPREN.

Yahoo group: StarCom21
Date: 2008-09-05 00:09:20 UTC
From: Ron H.
Topic: 2840 Message: 2854

IREACH, IS USED, by agencys up in Central Illinis, for general car to car, or portables, when they do not want to go thru Com Centers. We have used it for SAR operations when working with Sheriffs Dept. WoodCom dispatchs EMS and Fire on this or for other uses. As far as I know it does not require a tone, but would guess some do have that option set in there system. Unless a squad has had the VHF radio taken out, most in Illinois still have this programed. But with out a tone, as this was they way it was intended to be used. I do know that TC cars still use this, and not sure but would guess that some of the SP cars still have VHF, so they also would use it. It was intended to be used as a chit-chat channel, thus taking the load off com centers. Fact may not be known to some, but some of the Iowa cars that are up next to Illinois still have it in there cars or they did 3 months ago. Other states call it something else. Far as I know, Ireach is Simplex, as that was the way it was Lic.
If this is not correct, then I am hearing things!

2855. RE: EMS/ISP 155.35/155.46 ---- (was Re: [StarCom21] Re: ITTF MABAS)

Yahoo group: StarCom21
Date: 2008-09-05 00:34:51 UTC
From: Cris Hanna
Topic: 2840 Message: 2855

The idea was that EMS units could not be licensed to transmit on HF4 (155.46) since it was designated as a "police" frequency and ISP couldn't transmit on 155.43 which was a "Special Emergency Service" frequency. But nothing prevented EMS units from receiving on 155.46 and nothing prevented ISP from Receiving on 155.34 and so that's how it came to be

When I was EMS director at Scott AFB from 1992 to 1994, all our rigs had it as did the Lifeforce ambulances when I dispatched for them. Rarely needed but nice to have in a pinch

Topic: 2840 Message: 2856

Heard twice in the last 28 years. Both times rural/FPD ambulances with District 7. I thought the tone on 155.34 was 210.7.

So all...

I've seen this 155.46/155.34 Ambulance/ISP combo on lists for years....
(and the Carma State Profile)

I've never heard it in use and thought it was a very unusual set-up.

But, it actually sounds like a neat idea.

Around here.... not many ambulances contact D-11 HQ, but a few do on
I-REACH 155.055

I'd like to know where in Illinois, this has been heard in use and if
others know if it is 225.7 PL.

Thanks!
Terry

(by the way, maybe? all this is a little off topic for the SC21 group?)

2857. SC21 TG 2041

Yahoo group: StarCom21
Date: 2008-09-04 22:50:52 UTC
From: Kevin
Topic: 2857 Message: 2857

Anyone have notes for SC21 TG 2041? Heard a little of what sounded like a patch to an unknown analog frequency earlier this afternoon via site 101, but have not heard any traffic there since. Checked the CARMA SC21 profile but I don't see anything listed for this TG.

2858. RE: EMS/ISP 155.35/155.46 ---- (was Re: [StarCom21] Re: ITTF MABAS)

From: Mike Curtis (KC)
Topic: 2840 Message: 2858

I believe 210.7 on MERCI is the "statewide" PL tone - I often hear out-of-town ambulances contacting the local hospital with the 210.7 PL rather than the hospital's normal PL.

According to the MABASRadio.org site -

1) Hospitals statewide are responsible for having and licensing (hospital-hospital) 155.280 w/ dpl 156 and (ambulance-hospital) 155.340 w/ pl 210.7. They are also responsible for licensing any other frequency they need on a local basis. Some hospitals have 155.400, 155.220 , 155.160 or 155.340 (all with local pl's) that they use for ambulance radio traffic.

In another section listing all of the PLs used on MERCI it lists 225.7 as "Ill State Police" but I've never heard it used in LaSalle County. Either ISP talks to the local PD (who is typically the ambulance dispatch as well) on POINT (155.3700) or on the phone :)

Michael 210.7 is an "all call" tone that all hospitals theoretically have as a secondary tone for ambulances from out of their home region such as when someone goes from the Quad Cities to Peoria or the Mayo Clinic in Rochester, MN, etc.

2860. AIR-ONE helos

Yahoo group: StarCom21
Date: 2008-09-05 16:36:31 UTC
From: Kevin
Topic: 2860 Message: 2860

I was listening to SC21 this morning when I heard "AIR 192" come up on the SC21 ILEAS TG (30329) and contact a dispatcher (who/where?) in reference to a mission that the helo was activated for.

"AIR-ONE" is the Law Enforcement Aviation Coalition (LEAC), which is based out of Winthrop Harbor PD and, according to a recent article, serves 17 counties in northern and western Illinois as well as southern Wisconsin. They formerly flew a couple of different privately owned helos, but these have been replaced with three military surplus Bell OH-58Cs - they are as follows:

N79PD - registered to Winthrop Harbor PD and based at Kenosha Airport
N92PD - registered to Byron PD and based at Rockford Airport
N62PD - registered to Stephenson County S.O. and based at Freeport?

So the helo I heard ("AIR 192") was the one based in Rockford. In addition to using the ILEAS TG on SC21, they can also be heard making use of Winthrop Harbor PD's 155.610 (123.0) repeater (I'm guessing that this channel is primarily used by the helo based in Kenosha).

Here's a couple of links for those interested in more info:

http://www.airsupport.org - LEAC's web site
http://en.wikipedia.org/wiki/Law_Enforcement_Aviation_Coalition,_Inc.

Happy listening!

2861. Re: SC21 TG 2041

Yahoo group: StarCom21
Date: 2008-09-05 18:26:03 UTC
From: Kevin
Topic: 2857 Message: 2861

I listened to TG 2041 traffic for a little while this morning and it appears to be an IREACH patch. Traffic I'm hearing there is Portage, Indiana PD dispatch - they use 155.055 (88.5). I'm hearing this SC21 TG via the system's Chicago area sites.

I'm guessing that this is ISP D15's IREACH patch - the CARMA SC21 profile currently shows TG 2037 as D15's IREACH patch, but I don't hear the Portage PD traffic on that TG.

2864. My Upcoming Disability/Situation

Yahoo group: StarCom21
Date: 2008-09-06 03:26:35 UTC
From: Terry Weatherford, WX9SAR
Topic: 2864 Message: 2864

OK folks.... just want to let y'all in on some personal info...

In the upcoming weeks I will be having surgery to repair my (completely) torn rotator cuff on my right shoulder.

Yes, I'll have some well deserved time off from work, but unfortunately this is going to be a very painful operation and long recovery/rehabilitation.

I'll be at home, I'm sure, a lot.... wanting to be on the computer. Yes, I may be here online, but not sure how well it'll be attempting to do the things I love.

So, I do have a question...

Is anyone aware of or have experience with any Windows programs to assist those with disabilities?
(for example, it will be very hard to use mouse and keyboard with the right arm)

I did find a program at Target, called "Naturally Speaking 9" - but did not buy and have not done any research

I did a little research online, but didn't come up with much (probably not using the right keywords)

... unfortunately, I'm not getting good response from Work Comp, so this will soon get much uglier with attorney intervention.

Best regards...

Good luck on the rotator cuff Terry. Yes it is a pain in the drain recovery, but worth it in a serious case like yours. Just remember to do your therapy exercises religiously.

I used to work for 1-800-Medicare. We had a blind woman who was a CSR who communicated with her computer by speaking. We were sub contracted from a company called APAC. No relation to the paving company of the same name. APAC has a major call center near you in Alton. Speak to their HR person about what is available to help a person who cannot type because of a disability. I'll bet s/he could tell you.

As far as work goes, they should accept your disability and accomodate it under the ADA.

Again, good luck.

Dave :)

Hi Terry,

Sorry to hear about the surgery.

Dragon Naturally Speaking is considered the industry standard for this kind of assistance.

I actually just installed this for one of my customers and he has no disabilities (other than between his ears)

Installation is easy and even comes with the Headset.

If I can be of any help, I'm down here in Belleville. Just have some

Exchange Signature new

Subject: [StLASE] My Upcoming Disability/Situation

OK folks.... just want to let y'all in on some personal info...

In the upcoming weeks I will be having surgery to repair my (completely) torn rotator cuff on my right shoulder.

Yes, I'll have some well deserved time off from work, but unfortunately this is going to be a very painful operation and long recovery/rehabilitation.

I'll be at home, I'm sure, a lot.... wanting to be on the computer.
Yes, I may be here online, but not sure how well it'll be attempting to do the things I love.

So, I do have a question...

Is anyone aware of or have experience with any Windows programs to assist those with disabilities?
(for example, it will be very hard to use mouse and keyboard with the right arm)

I did find a program at Target, called "Naturally Speaking 9" - but did not buy and have not done any research

I did a little research online, but didn't come up with much (probably not using the right keywords)

... unfortunately, I'm not getting good response from Work Comp, so this will soon get much uglier with attorney intervention.

Best regards...

From: Ron H.
Topic: 2860 Message: 2867

Just FYI, Life Flight ? does have SC21 installed or so I am told, as well as AMT Ambulance Service which is based out of Peoria, how much they both use the system, ????? as sometimes when you would normally hear the "Mercy Freq" 155.34 you will not. AMT personal tell me they still use the old channels at times, so if you think you are not hear either, it maybe they choose to send info via the older Frequency's.

When I had surgery on my right hand a while back I took a low tech approach. I switched the mouse buttons and used it with my left hand, and typed less. Now I'm almost ambidextrous.

Best wishes,
SMG

2869. Update on St. Louis Cities' P25 System

Yahoo group: StarCom21
Date: 2008-09-06 15:09:23 UTC
From: Terry Weatherford, WX9SAR
Topic: 2869 Message: 2869

New Radio System Cutover Update

The entire South Patrol Division including the detective bureau has been successfully cutover to the new radio system. Any district or division that is currently on the new system and needs to speak with the Info dispatcher will have to change their radio channel to the old Zone containing the Info talk group, “**Info A**”, until Monday, September 8, 2008 at 5am.

On Monday, September 8, 2008 at 5am, the entire Central Patrol Division including the detective bureau will be cut over to the new radio system. District Channels 4-5, 9 and “RECON 2” are involved in this cutover. The old “**RECON 2**” talk group will be deactivated at this time.

“**Info A**” will also be cutover to the new radio system “Info A” channel on Monday, September 8, 2008 at 5am .

On Tuesday, September 9, 2008 at 5am, the entire North Patrol Division including the detective bureau will be cutover to the new radio system. This involves District channels 6-8, 7 and “RECON 3” are involved in the cutover. The old “**RECON 3**” talk group will be deactivated at this time.

On Wednesday, September 10, 2008, the rest of the police fleet that is still on the old radio system will be cut over to the new radio system at 5am.

There will be a technician from the Communications Service Center, at the Area Stations, to assist personnel as necessary with any questions they may have at the cut over time and date. On Wednesday, September 10, 2008 the technician will be available at the Communications Service Center.

ISSUES:

1) Do not transmit with a radio near another radio that is on the same channel. This causes an “echo” with the transmitting radio. This is the same effect experienced with the old system except users heard a “squeal” instead of the current echo.

2) With this new digital system, it is more crucial than the old system that you have the microphone approximately 1 inch from your mouth when transmitting. Failure to do so cause’s poor transmission audio that is difficult to understand.

3) If you need to use phone interconnect, you will have to revert back to a zone on the old system. Phone interconnect has not been activated on the new system at this time.

4) If you depress the “home” button on your radio, for approximately 4 seconds, it will take you back to your old home channel on the old system. After the entire department has been cut over to the new system, we will begin deactivating the old system. This will require each radio to be re-programmed.

2870. In need of help

Topic: 2870 Message: 2871

#1 Software!!! I prefer to use ARC996, some people prefer UASD or others. Download a couple of them and try them out in Demo mode to see which you like best.

#2 RTFM!!! Read the fantastic Manual. It has all the details and there are also alternate manuals provided by enthusiasts (see http://myweb.cableone.net/marksscanners/996/996.html)

#3 Download Files. Go to www.carmachicago.com/profiles and download the StarCom21 Profile and the ARC996 or UASD programming files. These files have all the sites, just turn off the ones not in your area or use the GPS feature. The CARMA Profile has a complete list of tower sites, frequencies and talkgroups.

2872. TESTING preformance of 996

Yahoo group: StarCom21
Date: 2008-09-09 01:55:57 UTC
From: Ron H.
Topic: 2872 Message: 2872

As I thought, there is excellent preformance, IF you just monitor one system, such as SC21, or EDACS, or if you wish, waste an expensive scanner to monitor Analog VHF or UHF frequencies. But you just can not expect the best reception to monitor all Bands at once. Having the delay set as short as possible would not catch both sides of the conversation, except when sticking to just one system.
Working off an actual 800mhz antenna enhanced greatly the reception as compared to a 1/4 wave ant. at the same height. I also used an antenna that has a height of 70 feet, while this increased the reception of distant towers, it also added less reception for the local towers, by preventing the hearing of both sides of the conversation.
Of couse others have far more experience in the radio world than me, but this is working for me, as there is only one tower within 5 miles, the rest are 20 miles or so, and further. With most squads working off Laptops, the Good Stuff may not be heard on any system. Living out where the Corn grows, there isn't much to be concerned with anyway. Just a great hobby, but expensive. Thanks to all who spent time gathering data for others.

No the reason I remember, I was at a meeting of some (7?) of the people that was the Pre-Carma the night before Davenport (IA) Hamfest in February 1979 (btw for those who was there and remember it, The Ramada Inn in Davenport was torn down this summer). Someone mentioned when told of the tone (210.7) for the 155.340/155.460. Said "how did they get a reed to vibrate that high?", He was told it was electronic instead. So in 1979 it was 210.7, no doubt it was changed after they higher tones available. Which for some reason I neither saw or took notice.

I'm sorry, I accidentally sent send by mistake. continuing the manual states:

"12.4 STATE POLICE ASSISTANCE

12.4.1 INTRODUCTION: All State Police District Headquarters and Sub-Post are equipped with 155.3400 MHz (225.7 Hz tone decode) MERCI radio receivers for receiving ambulance assistance request calls. The State Police in turn can talk back on their channel to any ambulance which is equipped with a receiver on 155.460 MHz.

The Illinois State Police stand ready..."

So there we have it, straight from the horses mouth.

Ok guys, I have the MERCI manual in front of me and I will quote chapeter and verse. First of all on page 13-3c There is a map of the State Police districts, district headquarters, and sub-post labeled as figure 13-4. At the bottom left of the map is the following note, "See para. 12.4 for instructions and procedures for obtaining state police assistance. Ambulances must transmit on 155.340 MHz wiht tone 225.7 Hz and receive on 155.460 MHz wiht no tone decode."

Going to paragraph 12.4 starting on page 12-16 the manual states:
12.4 STATE

From: Rich Richard
Topic: 2877 Message: 2877

I worked on some of those MERCI Micors back in late seventies and early eighties. They indeed had PL reeds on those frequencies. As I recall they were above the "normal" ctcss tones of the era and had "M" designators for custom or SP Motorola tones. When the ISP Hdqtrs button was depressed the mobile radios received 155.46 and transmitted 155.340. There was a seperate button for the state wide hospital all call tones on 155.340

2878. RE: [StarCom21] New Frequencies for StarCom From Ameren

Yahoo group: StarCom21
Date: 2008-09-11 14:42:11 UTC
From: Mike Curtis (KC)
Topic: 2706 Message: 2878

I was able to confirm the other day that 855.1625 has indeed been added to T131 (LaSalle) with the CWID of WQIU454. I'm curious if the rest of the channels on this license have been added to the towers in the locations listed. Both of the ones listed for Ottawa were added to T134.

Subject: Re: [StarCom21] New Frequencies for StarCom From Ameren

Well, that was the question i was just getting ready to ask...

Is Ameren going to have their own system (with their own system id) or TOTALLY be on the StarCom21 system.

I started building the new database entry and just moments ago, decided to stop because I felt that more that likely the Ameren frequencies were

just going to be added to the existing StarCom21 sites.

I guess there will be no new system!

I'll work on adding the FCC Callsigns of Ameren to the SC21 sites (and the new frequencies)

You are correct. Those micors had two or three System 90 control heads in front. One for the on/off, RF channel select buttons, and squelch. On top of that was mounted one with 8 push buttons for the PL tone select. The MERCI all call & ISP tones were designated by Mother Motorola as M-7 & M-10 I THINK. A few places had a third head on top of those two for status. The third head had another row of buttons to select 10-7, 10-8, 10-23, 10-24, etc.

There was a third or fourth systems 90 control head in the patient compartment for the medic to give the hospital report on the way in. Some units had hand mics & speakers, some had handsets. A few had headsets with an in line ptt switch and a foot switch for tx.

Just another FYI on how Illinois had money to burn back then. The MERCI radio microphones from Motorola were yellow and just below the speaker grill were printed in black or white with MERCI.

Also on the law enforcement side the ISPERN radios were seperate, usually four channel radios and both the GE and Motorola versions had red microphones that were printed in white letters just below the mic grill with ISPERN.

By the way if anyone has either or both of those Motorola mics I'd love to have one of each for a restoration.

2880. St Louis City P25 System Failure

Yahoo group: StarCom21
Date: 2008-09-12 03:38:19 UTC
From: Terry Weatherford, WX9SAR
Topic: 2880 Message: 2880

Last night was quite the evening.

While I was listening, I was hearing that "radio's are not associating
with the control channel"

Here is more info on the event below.

I haven't heard a peep out of the new system today.
It is still on the air with cc 859.4375, I just checked.

All operations appear to be on the old Motorola Type II system.
I can see it flashing by on my Pro-2055 (which is the scanner online at
scanamerica.us)

Good thing someone decided to keep the old system online and on the air!

(Even though Phone Patch and EMS are still planning on using the system
until 1/1/09)

Terry

Dear tweatherford,

WingnutStl has just replied to a thread you have subscribed to entitled - St. Louis City Police Department - NEW P25 TRS (Official Sticky - Summer/Fall 2008) - in the Missouri Radio Discussion Forum forum of The RadioReference.com Forums.

This thread is located at:
http://www.radioreference.com/forums/showthread.php?t=109865&goto=newpost

Here is the message that has just been posted:
****
*It appears that the new radio system suffered a major setback overnight. Word on the street is that the system would only allow one radio to transmit at a time (for the whole system). My source tells me that it took quite some time for someone with authority to make a decision to switch everyone back to the old system. Rumor is that the delay was because the old system is no longer being taped.

I feel for all of the officers (my friends) who were potentially at risk last night. I hate to see problems like this, but I would hate it even more if someone got hurt or even killed because of this. I've been gone from the city pd for almost 20 years and it saddens me to see that the command staff seems to care less and less about officer saftey as time passes.

It looks like they are working the bugs out and everyone should be back on the P25 system in the next day or two.*
****

There may also be other replies, but you will not receive any more notifications until you visit the forum again.

All the best,
The RadioReference.com Forums

I have a GE and I believe Motorola red ISPERN mic, I am still looking for a yellow MERCI mic myself. Nostalgia at it's best! They were simply housings that were colored. I recall these colored microphones where part of the requirement of the state grants and in the case of ISPERN, requirements of the ISPERN governing board. It was explained to me that any officer, of that particular patrol car's jurisdiction or not, could rapidly identify the ISPERN radio; grab the red mic and choose F1. Both the MERCI and ISPERN radios allowed use of open channel spaces for local jurisdictional use. Of course the radios of that day had quite a narrow bandwidth, channels had to be within 1.6Mhz, as I recall.

Rich, you are so right. Truely nostalgia at it's best. I recall fondly those days. In fact I don't think that today's radios are any better. Yes, they have oodles more channels capability. My mobile has like 800 channels, and my hand held 200,The size is smaller, but the 70s technology was so much simpler.

Push a control head button to go 10-23, and it got there. Today hit a computer button to go 10-23 and dispatch may, or may not get the message from a $6,000 computer hooked to a several hundred dollar radio.

Hard to believe that! Licensed to fire and other agencies in the state. Used by all public safety. Towing, etc --- correct but wouldn't say enforced specifically by all.

IREACH is not reserved solely for Law Enforcement. It is however, reserved for Public Safety, which includes police, fire, public works, conservation, public utilities, EMS, EMA and other government provided public safety and welfare operations.

well, if so why hasn't anyone said anything to our local fire departments. I'm a on a POC dept. We are allowed to use Ireach. I thought that is a Freq. designated for police, fire and other municipalities to come together for any type of emergency.

Civilian Civil Defense groups probably not the way to word it, how about city and county Civil Defense groups can and do use IREACH, along with Air Evac, Arch and others as a ground contact frequency, Air Evac will use it for contact with the FD, or other agency when they do publicity things to confirm information on the LZ. We had it in our ambulances and could use it for landing chopper's on scene. No one is out there telling them to get off of IREACH, maybe before you retired, not sure how long ago that was, it might have been only law enforcement.

Guys, if you read the entire structure, and I was on the road when this came about, agencys needed ONE common channel to comunicate with each other, base or mobil. It is and still is designed for any and all Emergency Services, But you need to apply for the license to be a legal user. Like anything, you have to keep up with what is available, don't think the FCC or APCO is going to invite you to apply. At present IREACH may fade away in some locations due to SC21, but the frequency slot will not!, as it only takes one agency to keep this active.
As for the Fire Depts, check and see if your city or county has this license, then just ask them NICELY if it is ok to use the Freq. I will just bet they will say, OK, get a letter from them, then program it into your trucks, how simple is that. (note)please do not say this is not legal, it is! as most agencys applied for multi use on the freq. UNLESS you are using an Amateur Band Radio, then you can not. (unless there is a Major Disaster Declared by the Gov.)
NOW, lets move onto something more important, such as when is the rebanding of SC21 going to take place, date for each area ????

Not true as far as police only. Calumet City ESDA has been licensed on 155.055 MHz since the mid 1970's. The terms of the license are 'mobiles only' and they run an active patrol schedule 12 hours a day/7 days a week. So they blend in quite well with the general chit-chat traffic that occupies IREACH in the southern Cook County area. That chit-chat, along with the regular traffic from Portage IN PD, pretty much negates IREACH for it's intended purpose in that area.

Out here in God's Country, we have no such issues.

Sorry for continuing the OTP.

Subject: RE: [StarCom21] New Frequencies for StarCom From Ameren

I was able to confirm the other day that 855.1625 has indeed been added to T131 (LaSalle) with the CWID of WQIU454. I'm curious if the rest of the channels on this license have been added to the towers in the locations listed. Both of the ones listed for Ottawa were added to T134.

Well, that was the question i was just getting ready to ask...

Is Ameren going to have their own system (with their own system id) or TOTALLY be on the StarCom21 system.

I started building the new database entry and just moments ago, decided to stop because I felt that more that likely the Ameren frequencies were

just going to be added to the existing StarCom21 sites.

I guess there will be no new system!

I'll work on adding the FCC Callsigns of Ameren to the SC21 sites (and the new frequencies)

I'm sorry Sgt Barnes, but you are only partially correct. Towing companies are not allowed on IREACH, however you are mistaken that it is law enforcement only. EMA / ESDA, EMS, Fire Services, and SAR agencies are allowed on IREACH as well as law enforcement.

The acronym IREACH stands for Illinois Radio Emergency Channel. It is a multi agency, multi jurisdictional channel. Currently State issued radios for EMA / ESDA, EMS, Fire, and Law Enforcement are being issued with IREACH as a standard issue channel.

ISPERN on the other hand, is strictly law enforcement in Illinois. It is an acronym for Illinois State Police Emergency Radio Network.

As a part time radio technician servicing radios in Western Illinois, Eastern Iowa, and extreme Southwestern Wisconsin, and as a full time owner of an EMS service I have programmed many radios over the years with both of those channels.

BTW, just an interesting note. Wisconsin evidently decided not to reinvent the wheel when they adapted 155.4750 as a statewide channel. They call it WISPERN - Wisconsin State Police Emergency Radio Network.

Fire officials work to adapt to new digital radio technology

By RON INGRAM - H&R Staff Writer

Herald & Review/Kelly J. Huff

Suspended 100 feet above ground, fighting a fire such as the one earlier this month at Sol Tick, firefighters count on their radios to communicate with other members of their unit.

The radio has become one of the most important tools a firefighter uses, along with bunker gear, air packs and flashlights.

Decatur Assistant Fire Chief Jeff Abbott uses his radio to talk to firefighters on the other side of a burning home during a recent fire.

DECATUR - Advances in technology are forcing fire departments nationwide to switch the portable analog radios that firefighters carry into action to new digital models.

Manufacturers are phasing out production of analog radio parts. That makes even the repair of older models of portable radios difficult and is speeding the move toward digital technology.

The change may not sound like a big deal, but testing by several fire departments in 2006 discovered the audio quality from digital radios could be distorted by background noises that commonly occur while fighting fires.

At times, the problem was so bad, voices were unintelligible.

That raised a major safety concern among fire personnel. The radios are a key lifeline for firefighters in structures filled with smoke and flames where visibility often is severely limited.

The issue is a key one for Central Illinois fire departments that are moving toward using digital radios. The Decatur Fire Department expects to have the new radios in the field by late spring or early summer of 2009.

Volunteer fire departments in Macon, DeWitt and Piatt counties also are moving to acquire portable digital radios but on a different system than the one Decatur will use. The chief reasons cited for the alternate system in the rural areas are cheaper cost and greater reliability.

"We've been paying close attention to digital radios," said Decatur Fire Chief Matt Sekosky. "We've made sure we can keep our old system if we

have to. But we're confident we can make the new system work."

Sekosky pointed to the International Association of Fire Chiefs which formed a working group last year to look into the situation. In November, it reported the problem was real and it was working with four major manufacturers of portable radios to find a solution to the distortion caused by the vocorder, a component of the digital radios.

The working group issued an interim report on June 30 noting that testing was continuing. It called on fire departments to adopt, thorough training, the use of the digital radio systems; something it said was not always done.

Sekosky said Decatur firefighters followed the recommendations of the international association and took their current radios and two of the new digital models and tested them side by side. He said noises such as power saws, breathing apparatus and engine sounds were concerns for creating background noise.

"Our test was inconclusive," Sekosky said. "When one model didn't work, the other model didn't work either."

A delegation from the Decatur department has visited Champaign twice to view a digital system the fire department there began using Jan. 1. Sekosky said Champaign fire personnel have experienced the distortion problem and are working with the system's manufacturer, Motorola, to correct it but overall are happy with the system.

Adding special noise reducing microphones to the new radios and voice amplifying microphones on breathing masks firefighters wear will improve the system as well as thorough training to make sure firefighters know its shortcomings, Sekosky said. A good feature of the new radios is they give off a signal when the wearer is going out of range of the base unit, he said.

"That allows a firefighter going into a building to know when to stop and back up," Sekosky said. "If a firefighter panics, he can go to a special channel to get communications.

"We are going to get state of the art equipment and training for everybody. If Motorola doesn't get this figured out, we can fall back on our old system."

Deputy Decatur Police Chief Ed Smith, who is coordinating the switch to digital radios, said the project's kickoff is Sept. 16. He said the first step is to convert the communications system at the Law Enforcement Center to digital.

The Macon County Sheriff's Office will be the first department on the new system next year because of dead spots the current system has in rural areas of the county with the analog system, Smith said.

RURALDEPARTMENTSADAPT

Efforts are underway by 18 fire districts and departments in Macon, DeWitt and Piatt counties to obtain a $600,000 grant from the Federal Emergency Management Agency for new digital radios and pagers.

A digital system must be in place by 2013 to meet federal emergency response standards, said Fire Chief Keith Hackl of the Warrensburg Fire Protection District. He and Fire Chief J. Steven Gambrill of the Harristown Fire Protection District are taking a lead role in seeking the federal assistance.

"The county departments don't have the money to support the city of Decatur's new system," Hackel said. "That system will cost $30 to $50 per radio each month in system maintenance fees."

The city is going to a repeater system meaning messages will go from a radio to a satellite or tower and back to other radios, Hackl said. If a tower went down, that could cut communications, he said.

"We will keep the same frequency we have and use a radio to radio system," he said. "We want to communicate with our mutual aid network."

If there is a national emergency, the rural departments will have a way to patch into the statewide Starcom system that Decatur will be using, a system operated by the Illinois State Police, Hackl said.

The Decatur Fire Department will receive a couple radios from the rural radio system and vice versa so cross communication will be possible, he said.

The rural departments originally planned to only seek federal help obtaining new pagers that they give to their personnel, who are largely volunteers, to call them to duty, Hackl said. Each department has 30 pagers costing $400 each so outside assistance was required to upgrade them, he said.

But with the mandated shift to digital radios, the departments decided to put the pagers and radios in one grant application, Hackl said. Whether the application is successful could be known anytime between now and the end of March, he said.

RadioReference CD-ROM

RadioReference CD-ROM
After 6 months of devleopment, RadioReference.com is excited to announce the release of the RadioReference Database CD-ROM. The CD-ROM will be generally available in mid-October, and will feature the complete RadioReference Database on a single CD-ROM. In addition to all the in-depth radio communications information coverage, the CD-ROM will provide a complete version of the Web service, which will allow supporting software applications to access the RadioReference data for automated scanner programming. The CD-ROM will be distributed through ScannerMaster and will retail at $29.95 + Shipping and Handling.

Scanner Master Partnership
On 9/1/2008 RadioReference.com, the Web's premier resource for radio communications information, and Scanner Master <http://www.scannermaster.com/?Click=20907>, the nation's oldest and largest Scanner-only dealer, announced the renewal and extension of their joint-marketing partnership. Through this partnership, the most comprehensive line of scanners, software, antennas and communications-monitoring accessories, sourced from around the world, are offered to the world's largest online community of two-way radio users. RadioReference is also developing exciting new products and services which will be marketed through Scanner Master starting later year.

See the press release <http://radioreference.blogspot.com> for more details.

RadioReference Mobile

<http://m.radioreference.com>
RadioReference
Mobile
RR Mobile was released on September 10th 2008 and provides mobile user access to the RadioReference Database via handheld devices such as the iPhone, Blackberry, and Windows Mobile. iPhone users have specific functionality tailored to the iPhone user interface.

Point your mobile device to: http://m.radioreference.com to get started.

New Features Released Q2 2008
The second quarter of 2008 brought a number of new features and functionality to the RadioReference site, including:

* Proximity Based Searches of FCC data
* Upgraded Forums Software
* FCC database now populated for Aircraft Base, Marine Base, and
Broadcast licenses
* New SOAP Based RadioReference Web service
<http://wiki.radioreference.com/index.php/RadioReference.com_Web_Service3.1>
for software developers

The fall will be bringing a number of new features to the site, with a
focus on classifieds for for sale/wanted activity and HF Radio Utility
Monitoring. Did You Know?
You can download data directly from the RadioReference Database into
your scanner using the RadioReference Web service and a supported
software package. See the RadioRefernece Web service page
<http://wiki.radioreference.com/index.php/RadioReference.com_Web_Service#Web_Service_Appli
cation_Support>
for more details on supported software packages and requirements. Use of
the RadioReference Web service requires a premium subscription
<http://www.radioreference.com/apps/subscription/>.

RadioReference Data on your Web pages
RadioReference provides a free API service to allow any Web site owner
to display RadioReference Database content directly on their own pages.
Leverage the RadioReference Database to create your own customized pages
with scanner and radio communications data! See the RadioReference API
page
<http://wiki.radioreference.com/index.php/API#The_RadioReference_Javascript_Remote_Render_
Display_Service>
for more details on how to get started.

Subscriptions
Don't forget that RadioReference provides fantastic services to premium
subscribers. Advanced reporting and downloads, access to the
RadioReference Web service
<http://wiki.radioreference.com/index.php/RadioReference.com_Web_Service>
for easy scanner programming, and personalization functions are some of
the features available. See the premium subscription page
<http://www.radioreference.com/apps/subscription/> for more information.
If you are not already a premium subscriber, consider updating your
account to premium status.

ScannerMaster
<http://www.scannermaster.com/?Click=20907>
ScannerMaster <http://www.scannermaster.com/?Click=20907> is
RadioReference's exclusive recommended scanner equipment dealer. Stop by
their site to see all their fantastic specials on scanners,
communications receivers, accessories, and scanner programming services.

When I programmed a Bearcat 996 scanner I could not use the P 25 setting. Indiana Safe-T system uses a unique system where analog and digital transmission are both utilized. I had to program the scanner differently than the Starcom 21 system to get it to work. If memory serves me correctly you have to configure in normal 800 trunk and not P 25. Knox Co./ Vincennes Indiana use an analog system whereas Indiana State Police and most State Agency (ie Conservation, Exice Police) use digital but all share the same system and have interoperablity. The Bearcat scanners I've programmed had the Indiana Safe-T system pre-programmed. Use can use this pre-programmed group to help identify the sites which are active in your area. The Indiana sites share frequencies and the same transmissions may come on different names sights. You just need to identify the actual sights which your closest to and lock the others out to improve scanning time.

Subject: [StarCom21] Radio type settings

Using both Arc and BCtools to program the 996, Does anyone know what

the TYPE setting is for the Indianna ISP system, reason I ask is that

seems every state use's a different name for the system.

Also seems to be some gaps in there systems, or maybe RR does not have

an up to date data base for IN.

2914. Uniden Firmware Update 3.00.00 & Starcom

Yahoo group: StarCom21
Date: 2008-09-30 18:20:49 UTC
From: Dave
Topic: 2914 Message: 2914

Completed the firmware update on my 996 and it was easy as in updates past. Monitoring Site 102, which is a Simulcast site and have to report some improvements. Conversations are more tolerable, but not perfect. I know this system still has some problems, so not sure if if the occasional garble and control channel drops are system related or scanner related. I do hear some drastic improvements with End Code and Status Bit set to Ignore. Right now Digital End Code is set to Yes, but may tweak that too.

The Indiana State Police toll road District is District 11 I believe and they used to have their own High Band VHF repeater system years ago prior to the SAFE-T system. I just assumed the Toll Road District migrated to the Safe-T system. I know there is a Safe-T user group on the net where you can obtain info and is similar to the StarCom 21 user group. Your right Ron, I remember I programmed the Bearcat as a Type II Motorola system and the Safe-T system started working. I wasn't sure if <kj.barrett was inquiring about Dist 21 ILSP (Ashkum Il) or Indiana State Police District 21. My latest Radio Call book with Scanner info is from 2000 and still listed Indiana St Police toll road as District 11 but they may have changed since then. I haven't been up there with a scanner in numerous years and I don't have any current information.

From: larry blaize
Topic: 2906 Message: 2916

I programmed a scanner for one of the local County Departments last year and I believe it was digital Pro 296. I think all the Safe-T sites were pre-programmed in that scanner also. I know the Safe-T system used some of the same 800 frequencies as the StarCom system in our area and the way I had the scanner programmed it would pick up either system. The local Department didn't want to buy the high dollar Bearcat so they bought the Digital Pro radio on sale. It works on Starcom fine in our area now but we haven't been rebanded yet. I know of only 1 site within 100 miles of me that uses the 700 Mghz frequencies so this isn't an issue for them yet. We'll see what happens after all the reprogramming. Ameran/CIPS supposedly has completeted the transition to Starcom in the Effingham area and is supposed to be switching over at any time further south near Lawrence, Crawford, Richland County areas.

2920. Uniden 396 Ver. 3.0 upgrade firmware *preliminary results*

Yahoo group: StarCom21
Date: 2008-10-07 05:24:27 UTC
From: Bobby Ray Ransom
Topic: 2920 Message: 2920

OK, I have been trying things the past couple of days based upon what has been reported as optimal on other boards. Starcom21: I have tried Manual, Auto & Default in about 4 different areas (Northside of Chicago near O Hare Airport) with site 115, (Woodridge and Downers Grove area) with site 101, (Hinsdale and Willow Springs) with site 102, and Lockport/Lemont with site 113) Keep in mind this is not a long term comparison. As those of us in the Chicago area know, Starcom sometimes has a life of its' own: Pulsing control channel signal strength bars, weather related impact on signals, etc.. So, to say this IS the answer would be wrong. Here's some early findings though......

P25 wait time: Trying 0 through 900 with P25 Adjust Mode of 3, and P25 adjust levels from 0 to 90, the popping sound decreased on in some areas but still showed up heavy on TG 1001 (Plainfield PD)& 9002 (District 2 State Police). All across the board on Adjust Mode 3 or higher, it played serious havoc on sites other than 113. Almost consistent garbled transmissions. The best settings I have found for Site 113 in Will County, Illinois are...P25 wait time of 700ms, P25 Adjust Mode of 2, and P25 adjust level of 90. This yielded the best performance on site 113 since upgrading to Ver 3.0.
This is only the beginning.....I'll still be testing throughout the week, but this appears to work best in this area thus far. Feedback from anyone else who has done the Ver 3.0 update would be appreciated.

Here is a suggestion, Download BCtools, suscribe to RadioReference, get a cable, and you can obtain about any fregs you want, this is the easy way, or just use BCtools and write your own system, then load it to the scanner. Just what I do.

I've heard IEMA units ID 4001 as "IEMA 1" in the past.

I assume the "Incident 3" they're referring to for the drill in Marion is what's labeled "ITTF Incident 3" in the database (TG 30334). This falls in line with other IEMA references to "Region" talkgroups and their use of the ITTF regions during recent flooding around here.

I live in Bolingbrook. I am basically looking for the Northern Illinois area Starcom21 files to import in bctools. (any areas that I would be able to hear up here)

Anyone help me out?

Thanks again.

2933. IL USAR TF-1 Activity

Yahoo group: StarCom21
Date: 2008-10-08 20:54:18 UTC
From: Kevin
Topic: 2933 Message: 2933

Heard some traffic on the Starcom21 MABAS TG yesterday (Tuesday) between an IL USAR (Urban Search and Rescue) Task Force 1 "advance team" (convoy) and DuPage County OEM EOC re: status and location updates. Seems they were heading down I-57 from the Chicago area, and their destination was a fairground - possibly in the Effingham area. Units in the convoy went to secure mode at least a few times during their trip ("pick me up a Pecan Log at Stuckeys"?).

Anyone know if this was a "real world" response or perhaps some kind of drill? Their website can be viewed at http://www.il-tf-1.org/ .

This looks like where they were going - thanks for the info, Duane! One article I read online says that Mt. Vernon is/was being used as a staging area for this drill.

I monitored this traffic until the early hours of Wed. morning. Units in the convoys checked in with locations as they went south, coordinated by Dupage EOC. The fairgrounds were in Marion, which may be where the exercise operations took place. Some units turned around there, perhaps after dropping off teams and equipment, then returned north. Milepost check-ins on the return trip probably helped keep drivers awake.

Operations today seemed to generate less traffic. That may be because once comm units arrived on site they were able to establish comms via satellite, microwave link, or some other means to accommodate a much larger amount of traffic.

I held on Tower 203 during most of this.
Mike Lehman
Urbana, IL
PS Hi Duane! Thanks for your link to the exercise announcement.

2942. "Road trip" to Gillespie (Macoupin County)

Yahoo group: StarCom21
Date: 2008-10-11 14:18:09 UTC
From: Terry Weatherford, WX9SAR
Topic: 2942 Message: 2942

Obtained DPL tone on Gillespie Police Dept's new Repeater:

154.80000 158.98500 KSC543 </apps/db/?cs=KSC543> RM 351 DPL
Gill PoliceN Police: Dispatch [NEW 7/08] (*ID 10/08) FM Law Dispatch
154.98000 KCS543 </apps/db/?cs=KCS543> BM 85.4 PL Gill
PoliceO Police: Dispatch FM Law Dispatch

Standing at Gillespie football field on the west side of town (near a
large tower actually).
Pretty much open field, flat land around here.

Using my BCD396T with /*stock antenna*/, was receiving SC21 sites VERY
well. These I heard and understood traffic on.
-305 Belleville (no bars)
-325 Edwardsville (1 bar)
-307 Beaver Dam (Full Scale) (picked up traffic at the 30 mile marker
on I-55 too)
-324 Nilwood (3-4 bars)
-312 Mt Olive (nearly full scale)
-355 Godfrey (1 bar)

Received the Madison County Transit District EDACS TRS just fine and
Madison County 911 on 154.43.
Received the Wireless USA 900 MHz system in Fairview Heights with no
problem.

Gillespie School District LTR
*Gillespie Community Unit School District #7 - VHF (Macoupin)
</apps/db/?sid=4829>*
LTR Standard Single channel VHF LTR for school/bus operations

-still detecting LTR bursts, but heard NO traffic during the football
game operations.
-This LTR was coming in way down at the 30 mile-marker on I-55.

2943. User of TG 4552 On StarCom? (Or, Incident at Rt. 52 and IL 47?)

Yahoo group: StarCom21
Date: 2008-10-20 22:42:17 UTC
From: Mike Curtis (KC)
Topic: 2943 Message: 2943

It's listed in the profile as a "Dept of Corrections" talkgroup.

Today I was picking up traffic from a handful of units with something going on at Rt. 52 and IL 47 north of Morris in Kendall County. I passed the intersection a couple times this afternoon while they were there and what I saw were 5 vehicles (Explorer, crown vic, 2 impalas, and another SUV - all with antennas and lights but no agency markings), all with non-municipal plates but three of em had all kinds of red and blue LEDs flashing away as they were parked off to the side of the road but I didn't actually see anyone out of their vehicle due to the rain at the time. A couple times on the radio they mentioned "contacting the media" but I have no clue what was going on.

As an aside, the radio IDs used were 422xxx with units IDing as the last 3 digits of the mobile radio ID, with their portable ID being "300" higher (ie 422275 was "275" as was 422575).

I also got a close call hit from them on 155.9250 but didn't catch a CTCSS tone.

Any ideas?

I believe it must be some kind of "common" group. What you saw is the same as I saw before (it seems like) was a portable weigh station, with those SUVS. Just have heard lots of different uses with different id's

Sheridan Correctional Center is VERY close to the area you mentioned. Work crews/trustees sometimes get 'homesick'.....not saying that is what happened. Sometimes IDOC has work crews out assisting in flood areas or cleaning roads and stream areas. Sometimes the employees get searched immediately upon stepping onto state property. If they choose to flee then IDOC may contact local law enforcement to assist in stopping that vehicle. IDOC also has K-9 units and travel in unmarked SUV's. Anything is possible but clearly could still have been IDOC units. Contacting the media could have been for some "good" press. I'll bet if you had Sheridan's frequencies plugged in it would have shed some light on things related to that.

Secondly, IDOC has vehicles with plates starting with U. IDOC vehicles do have the red & blue lights. I'll bet people didn't know that IDOC imnates used to have a paramedic program that served the town of Vienna, IL., and that the inmates responded with an ambulance. That was years ago in the 70's and 80's.....Maybe someone who has worked in IDOC over the past decade or is still working for IDOC now can chime in about the Vienna piece.

The 155.xxx may be IDOC just having access to a local LE channel in the event of an attempt escape or a myriad of other scenarios.

There didn't seem to be any sort of manhunt or active traffic stop going on. The three sedans had traveled to Morris for lunch and fuel (commenting on how they wanted to compare gas mileage between the Crown Vic and the Impalas). When I passed through, they were just sitting on the shoulder in the middle of nowhere with their lights on.

I didn't see any transport-type vehicles (vans, buses, etc) or anyone out doing anything except for an empty tripod sitting on the ground behind the open hatch of the Explorer. The license plate on the sedans were 7 digit Illinois plates. I didn't catch the ones on the SUVs because they were sitting on Rt. 52 and I was on IL 47 where the sedans were.

I did hear them mention on the radio that they should "pack up because it's getting dangerous out here" so that leads me to believe they were doing some sort of vehicle inspections? I'm just not sure :)

155.9250 is listed as a "Misc Agencies" frequency for the state in the CARMA profiles. The state is indeed licensed on that frequency with IEMA, IL Lottery, IL Revenue, SoS Capitol Services, SoS Driver Services, and U of IL having base licenses as well as 1,000 "statewide" mobile licenses.

Well, I guess that rules IDOC out. Every vehicle they utilize begins with U....except for the vehicle the Director is carted around in. Interesting observations on your part though. I think I'll plug that TG in with an alert sound so when it does pop up I can tune in on the activity for identification purposes.

Today I was picking up traffic from a handful of units with something going on at Rt. 52 and IL 47 north of Morris in Kendall County. I passed the intersection a couple times this afternoon while they were there and what I saw were 5 vehicles (Explorer, crown vic, 2 impalas, and another SUV – all with antennas and lights but no agency markings), all with non-municipal plates but three of em had all kinds of red and blue LEDs flashing away as they were parked off to the side of the road but I didn't actually see anyone out of their vehicle due to the rain at the time. A couple times on the radio they mentioned "contacting the media" but I have no clue what was going on.

As an aside, the radio IDs used were 422xxx with units IDing as the last 3 digits of the mobile radio ID, with their portable ID being "300" higher (ie 422275 was "275" as was 422575).

I also got a close call hit from them on 155.9250 but didn't catch a CTCSS tone.

Any ideas?

2948. Re: [StarCom21] User of TG 4552 On StarCom? (Or, Incident at Rt. 52 and IL 47?)

Yahoo group: StarCom21
Date: 2008-10-21 17:13:26 UTC
From: Terry Weatherford, WX9SAR
Topic: 2943 Message: 2948

The very first time I encountered this talkgroup was for:

4552 - heard on towers in Madison and St. Clair, usually after 10pm.
Heard "Where are you at? headed back to hotel" "telephone" "K-19"?
*Heard this 2 people talking for part of one week.

"Young 24 - I've got the signal to go in. Young-2 call the guy inside,
concerned that it's been too long"
*Heard this one night a couple weeks later. ("Young Units" are IL
Department of Revenue Investigations)

OK, Like I said before, I drove by this type of situation about a month
or two ago,.

I didn't see a portable scale, but I heard them talking about pulling
semi's over. There were a couple MARKED district 15 ISP units, (15-129),
Ford Expeditions and some unmarked cars.
I actually heard them on 4552 while passing them on IL route 3 north of
I-270 in Madison County. Those were Ops among themselves.
For dispatch, they were using 17068 SpecEvent Zone3A.

I also heard them on 155.46 CSQ (HF-4)

There was H-36 (ISP Plate) on an unmarked dark green older-style
mustang. Also heard this unit talking on:
4476 117c D ISP H 4476 ISP - Henry Units (seen/heard Portable Scales
on IL-3 9/08)

There was H-30 (ISP Plate) on a white marked Ford Expedition.

Henry is supposedly IDOT Units.

This info probably just made it more confusing.

The units at 47 & 52 were checking the fuel of semi's for "on road" / "off road" diesel. Didn't hear them on STARCOM, they were on 155.925, I didn't get a PL either. I didn't see them, I just heard them approaching Morris from the south on their way north to the scene of the 'detail'. They didn't use unit numbers, just names. Maybe they were SOS or ICC ? K9NYX

I've heard users on that tg call themselves, "diesel dippers."

On Starcom they used first names and the last 3 digits of their radio IDs as "identifiers" (275 for example)

What exactly is "on road" and "off road" diesel?

Off-Road diesel is same as regular except it is dyed red. The reason is because off-road diesel is usually used for heating homes, tractors & other farm related equipment and does not have any taxes placed on it making it alot cheaper at the pump than regular diesel.

On road & off road diesel fuel are different colors. Off road is for farm implements and is tax exempt. On Road diesel fuel is used in diesel autos, buses, trucks, etc. Not sure what you are allowed to use in stationary standby generators, tow boas, etc.

Any non-road use is legal for off-road dyed fuel, AFAIK.

I used to work for a transportation company. Un-dyed fuel went in the over-the-road tractors. Dyed fuel went in the reefer units. Do NOT mix the two, as the dye is such that even a little bit becomes very obviously a visible contaminant in tractor tanks, which is exactly what it's intended to do. If caught, don't try explaining your problem to the revenuers. :-$

Interesting operation, never caught any traffic like that myself, but with the crazy prices of fuel lately...

According to information found online, the Illinois Department of Revenue (IDOR) has motor fuel tax enforcement special agents as well as a Bureau of Criminal Investigation. One IDOR web page dealing with the dyed diesel program states "Funding secured from the Illinois Department of Transportation, the Illinois State Police, and the Illinois Commerce Commission to purchase vehicles and testing, sampling, and safety equipment, has allowed IDOR to enforce this program." A previous poster stated that they had heard units using a "Young" radio identifier prefix on TG 4552 - in the past, this prefix has been reported in use by IDOR agents. I have heard voice traffic on TG 4554 in the past - I'm now wondering if perhaps this is another of their TGs?

The very first time I encountered this talkgroup was for:

4552 - heard on towers in Madison and St. Clair, usually after 10pm.
Heard "Where are you at? headed back to hotel" "telephone"
"K-19"?
*Heard this 2 people talking for part of one week.

"Young 24 - I've got the signal to go in. Young-2 call the guy inside,

concerned that it's been too long"
*Heard this one night a couple weeks later. ("Young Units" are IL
Department of Revenue Investigations)

OK, Like I said before, I drove by this type of situation about a month
or two ago,.

I didn't see a portable scale, but I heard them talking about pulling
semi's over. There were a couple MARKED district 15 ISP units, (15-129),
Ford Expeditions and some unmarked cars.
I actually heard them on 4552 while passing them on IL route 3 north of
I-270 in Madison County. Those were Ops among themselves.
For dispatch, they were using 17068 SpecEvent Zone3A.

I also heard them on 155.46 CSQ (HF-4)

There was H-36 (ISP Plate) on an unmarked dark green older-style
mustang. Also heard this unit talking on:
4476 117c D ISP H 4476 ISP - Henry Units (seen/heard Portable Scales
on IL-3 9/08)

There was H-30 (ISP Plate) on a white marked Ford Expedition.

Henry is supposedly IDOT Units.

This info probably just made it more confusing.

2958. Rescue in Monroe County IL / New SC21 TG

Yahoo group: StarCom21
Date: 2008-10-27 21:59:06 UTC
From: Terry Weatherford, WX9SAR
Topic: 2958 Message: 2958

Ongoing, not sure of the latest status.

100 foot Zip line in Valmeyer about to fall with a person stuck on it.
Located on a dirt road that a ladder truck may not be able to reach.

Monroe County was using remote link 453.3875 D343 to broadcast on 154.19
167.9 PL
Columbia PD was talking to units on 154.19 167.9 PL.

Then St Clair County Paging out Fire/ESDA on 154.19 186.2 PL

Minutes later, St. Clair County ESDA was responding on SC21
7087 1baf D SC ESDA Ops St. Clair County ESDA (units-5-00s)
Emergency Ops

Noting that cellular communications WOULD NOT work in the area and not
sure if the "County Trunked System" will work (SC21)
Another ESDA personnel said that he was "bringing the Hackney with the
20 VHF Radios".

Another noted talkgroup NEW to SC21, in a new series too... 4600s

Heard on T355 Godfrey:
4609 1201 D unid 4609 unidentified use (T355 said "Effingham
<unidentified> Activation") Other

2959. NAC For Site 126 Kane County

Yahoo group: StarCom21

2962. CARMA Meeting Saturday

Yahoo group: StarCom21
Date: 2008-10-31 09:36:30 UTC
From: n9jig
Topic: 2962 Message: 2962

Please join us at the CARMA Meeting on Saturday, Nov 1 at Phillies Pizza, 63rd & Kingery Hwy (IL-83) in Willowbrook.

Doors open at 11:00 and lunch is served until 1:00 PM, when the meeting starts.

Please park on the west side of the building, not in front.

Talk-in is 145.770, PL 151.4.

The Wireless Mic is on 171.045.

You must buy your lunch, please be sure to tip our wait staff generously, they deserve it!

See ya there!

Jack,

Were you able to get a response to this?
ITTF is coordinating the reprogramming of
Starcom radios around the state by appointment only.
Certain agencies will bring their radios in on certain days.
In the future most repromgramming will be done over the
air and will not require radios removal or on-site programming.

Regards,
Michael

Although raadios get flashed for the rebanding it doesn't mean the switch will take place right away. There is no set day and time to my understanding to flip the switch and stop using the other frequencies. The only option is to do what I did for Stateville. I programmed in the rebanded frequencies once it was revealed that the radios were being worked on and waited for something to happen in that respect. Although another hobbyist saw it on his scanner first and advised me of the transition. If it turns out the way Stateville did, there was no noticable difference in anything except my display showing the new frequencies and not the old. Those radios may have the new frequencies programmed in them as well but they won't become active until the actual move happens. I wouldn't expect anything until 2009 anyways. If it goes like the actual phasing in of Starcom happened, our area...Metro Chicago & surrounding suburbs, will be last. Patience and pre-programmed banks or systems/SQK's are all we can do....and then report as soon as we see the activity happening. I hope that helps.

2967. Election Night

Yahoo group: StarCom21
Date: 2008-11-04 23:14:20 UTC
From: Michael Leoni
Topic: 2967 Message: 2967

I am in radio isolation and only have action to online scanners for the next couple of hours.
However, agencies far out side Cook county are involved in tonight's response.
What if anything is active on Starcom?
ITEC trailer(s) are possibly mobile and I'm guessing conventional analog traffic should provide some clues about multiple agencies gearing-up and getting in position.

Affirmative.
Are you hearing any active talkgroups?
There are lots of support roles that are being coordinated.
It is an event in it of itself that requires coordination.
Management of vehicle and foot traffic for +100,000

Now throw in a few dumpster fires in a couple neighborhoods shuold that occur
and you need to have agencies and people to deploy rapidly.
Does this help explain a little bit better?

I would suggest doing this with software, such as BCtools or what ever
you want to use. I for one would also have a problem trying to enter
the frequencys. With the software you could enter them then up load to
the scanner. For one thing sure, it would make having a scanner more
fun and enjoyable.

If this was a new unit, then it would be in the user manual, if not you will probaly need to search for a user manual online.
IMERT, where are you located ? as some Imert frequency's seem to be different, and from what I know, some also use the local hospital frequencys as part of there operational communications.

I programmed mine by hand. You need to find the control channels in your area. Where are you located? Look up the control frequencies for your area and enter them into your scanner for starters. They should be in the area between 866 and 869 megahertz.

After spending some time searching for the list, it would seem that the IMERT teams will use a mix of frequencys that are the same as where the hospital that they dispatch from uses, I find no license for IMERT in the FCC data base. Or at least that is where I looked with no luck. I am not sure that IMERT was issued SC21 radios through ILEAS, which is the controling agency for handing out the radios, OR taking them away if not used by an agency.

IMERT does use Star-com. They pay for their own channels on the system. But they use encryption 24/7 so you will not hear them unless somebody switches it off or they have to because they lose the key in one of the radios. And yes the do use a VHF channel on scenes.

2978. Re: Radio Shack pro96 programing

Yahoo group: StarCom21
Date: 2008-11-06 18:33:12 UTC
From: Kevin
Topic: 2973 Message: 2978

For those who aren't aware, IMERT http://www.imert.org/ is the the Illinois Medical Emergency Response Team. According to their web site, their mission is to respond to and assist with emergency medical treatment at mass casualty incidents, in addition to coordinating educational programs to EMS participants in Illinois. They are based in Downers Grove and per a map http://www.imert.org/aboutus/regionmap.htm on their website they have teams based in Chicago as well as Northern, Central and Southern Illinois.

Other than their use of a few talkgroups on SC21, I don't believe that I've ever seen any other frequencies posted for IMERT (though I imagine that they have mobiles and portables in the VHF and/or UHF range(s) for on-scene and interoperability use - anyone know for sure what other freqs they use or have access to?). AFAIK, they are not associated with nor are they dispatched by a hospital, but rather are administered by the Illinois College of Emergency Physicians. They have been heard using TGs 16465 ("ops"?) and 16466 ("command??) on SC21, where dispatchers at DuPage County Office of Homeland Security and Emergency Management (DCOHSEM) keep tabs on the status of IMERT personnel and vehicles in the field. Before they started using the above TGs, IMERT formerly used the IESMA TG (30328) to communicate with DuPage County, and I imagine that they likely have access to this and other SC21 TGs as well if needed.

The original poster (MFDRadioman) inquired about programming the "frequencies and numbers" for IMERT. The frequencies would be those used by the Starcom 21 system, and the numbers would be the talkgroups. You first need to successfully program your radio to monitor the SC21 system. IMERT's talkgroups can then be monitored in either the talkgroup scan (where they are programmed into the radio) or talkgroup search mode. The most "up-to-date" information for the SC21 system that I know of is contained in a CARMA profile available at http://www.carmachicago.com/profiles/StarCom21.pdf .

One last note - in the past, one side of their converstations on SC21 (can't remember if it was the mobiles or DuPage County) has been encrypted.

Hope this helps....

2979. New ITTF, etc. Talkgroups?

Yahoo group: StarCom21
Date: 2008-11-06 18:45:00 UTC
From: Kevin
Topic: 2979 Message: 2979

According to a reliable source, some of the ITTF regional talkgroups have been "rearranged" with the recent rebanding of SC21 radios and some new ITTF regional talkgroups have been added as well. It has also been reported in the past that MABAS was pushing for additional TGs as well. Hopefully we'll see a list of these new and rearranged talkgroups soon.

2980. RS Pro106 and 197

Yahoo group: StarCom21
Date: 2008-11-07 01:49:55 UTC
From: Rich Carlson
Topic: 2980 Message: 2980

Will and I stopped by a Radio Shack today and inquired about the RS Pro106 and Pro197 scanners (The RS clones ofthe PSR500 and 600).

They are on sale for $399 (regular is $499 plus tax), and they offered the Friends & Family discount, bringing the total price for either scanner to $302, including tax. Since these are not usually stocked in-store, they have it drop shipped directly to you for free.

While I would prefer the GRE version due to the greater likelihood of frequent firmware updates, I could not pass up the deal, mine should be delivered early next week!

If making a large purchase at a Radio Shack and you are not offered the F&F Discount it can't hurt to ask for it. No coupon was needed.

There are a number of revised (and duplicate) identities in the "ITTF Statewide/Regional Talk Groups" list on RR. I haven't read anything anywhere on the reason/basis for these changes. Does anyone have some inside insight?
Thanks!

Thanks, Terry. I went to that site before I posted; I was just looking for a little more background on the info and its source.
So I take it that we should use the "new" IDs in the case of duplicates on the RR database?
Thanks again for the reply.

2990. Re: [StarCom21] New TGs in the ITTF List?

Yahoo group: StarCom21
Date: 2008-11-08 17:56:10 UTC
From: Terry Weatherford, WX9SAR
Topic: 2987 Message: 2990

Those messages is where the info is, like:

* http://groups.yahoo.com/group/StarCom21/message/2979
* According to a reliable source, some of the ITTF regional talkgroups
* have been "rearranged" with the recent rebanding of SC21 radios and
* some new ITTF regional talkgroups have been added as well. It has
* also been reported in the past that MABAS was pushing for additional
* TGs as well. Hopefully we'll see a list of these new and rearranged
* talkgroups soon.

* http://groups.yahoo.com/group/StarCom21/message/2981
* http://jts203.com/2-IllinoisStarCom21.htm
*
* My page, listed above should have the newest control channels and
ITTF talkgroups from a rebanded radio.

I had not removed the old ones yet, until I had a chance to save the old
descriptions, etc as backup.
I am working in the statewide, Illinois page right now.

Terry

From: Cris Hanna
Topic: 2992 Message: 2993

I monitor this system going to and from work during the week.
As of Friday afternoon, still no traffic on it, at least during rush hour.
Everything still on the Analog System

I suspect that they are still working out the issue Terry W mentioned last time.

2994. PSR 300/400 Question ???

Yahoo group: StarCom21
Date: 2008-11-12 11:19:51 UTC
From: wcltdnut
Topic: 2994 Message: 2994

List,
Does anyone know if the PSR 300/400 will work for SC21 ?????
If so, this could certainly be a lower cost scanner for monitoring
SC21. $500 for a handheld is just slightly pricey for me at this time.
Thanks
Dave

No, these will not. They are analog only, while StarCom21 is a digital
only system.

Here are the only scanners that will work on ALL StarCom21 sites:

Uniden BCD996T
Uniden BCD396T
GRE PSR500
GRE PSR600
RS PRO106
RS PRO197

These radios will work on StarCom21 800 MHz. only sites:
Uniden BCD296
Uniden BCD796
RS PRO96
RS PRO2096

3003. Arch 4 On Starcom

Yahoo group: StarCom21
Date: 2008-11-13 19:37:03 UTC
From: Mike
Topic: 3003 Message: 3003

Around Noon- 1PM Today Thursday, I heard ARCH 4 calling River Fire ?
Then again ARCH 4 to RIVER Fire on Mutual AID.

I am guessing they were on the wrong frequency or maybe MABAS has a
MUTUAL AID Patch?

3004. Re: Arch 4 On Starcom

Yahoo group: StarCom21

From: Ron H.
Topic: 3003 Message: 3004

The Mutual Aid frequency is part of the MaBAS frequencys that are in use, which are Analog, so there is no need of a radio/patch to make it work. Keep in mind that SC21 radios are not the only ones they have aboard the Helo's. Any way here in Central Illinois they will contact Fire/Rescue/EMA on what ever the command channel is at the time. Very few Fire/Rescue mobil units have SC21 radios installed, not necessary to do the job. I still copy the MERCI frequency all the time here, and certainly not via a radio network Patch. Not to sure how much the Air Units really use SC21, as they may not have replaced the UHF data systems, and for sure not the VHF Analog radios.
So NO they where following procedures, and not on the wrong channel. The Ground IC sets the needed channel that will be used by all responders.
Question, does anyone know for sure what areas have completed the RE- BANDING on the SC21 sytem, just curious.
INFO, MABAS (is VHF High Band, Wide/Narrow) and is not on the SC21 system, but somewhere was reading that they want to make it part of the MABAS radio system, (don't quote me on that). But I'll bet it does not fly !!!!

3006. Lots and Lots of PvtData Grants This Afternoon

Yahoo group: StarCom21
Date: 2008-11-14 00:31:09 UTC
From: Mike Curtis (KC)
Topic: 3006 Message: 3006

I've noticed a flood of PvtData channel grants on StarCom today (generating a number of queued transmissions as well). While out traveling today, I saw this on multiple towers (T101, T126, T136, T131, and T134). Having never seen this traffic on StarCom before, I was surprised. I noticed it hitting one radio at a time, often as soon as they would affiliate with the tower.

Is this over-the-air reprogramming? (Maybe the changing of the ITTF groups?) Or is it something completely different.

Not to worry, someone must have convinced Dog Catcher (Animal Control) that they need to use SC21, as Creve Couer, Ill is now using the system.

Hearing this morning on ID4016, 30323, what sounds like a nuclear disaster drill, code names "Rainbow" and teams reporting levels of radiation, white team, black team and "Henry 9" reporting...Seems to be mostly on T125-Grundy Co, do not hear any pertaining traffic on the Chicago towers....Ron in Joliet

3016. Starcom 21 OFSM "Statewide" Talkgroup

Yahoo group: StarCom21
Date: 2008-11-19 21:43:20 UTC
From: Kevin
Topic: 3016 Message: 3016

Heard a couple of State Fire Marshal's Office "David Adam" units on SC21 talkgroup 4601 a little while ago. One of them referred to the talkgroup as "statewide". I'm guessing that it would be logical to assume that this is their statewide TG.

This now begs the question "do they also have region/zone TGs as well?".

I was near the Moline / East Moline north east border this morning. I could not get East Moline site 107 at all. Even on the drive over. East Moline site 123 was ok as was 122 in Rock Island. I was too close to the bluff in the area to hear any other sites. Even did a search of 866-869 and only got those two sites. I did last hear 107 weekend before last.

Motorola Type II SmartZone Omnilink

Central/East Central IL (Edgar, McLean, Tazewell, Piatt, Marshall, Logan, Peoria, Woodford, Sangamon, Knox, Edgar)

It appears at this time, some of the local Motorola Type II towers for AmerenIP are no longer operating at all here in the MetroEast. (Since they have migrated to StarCom21)

Godfrey Tower is still on the air. It is a strange situation because it was formerly only an EDACS tower for the St Louis area/based AmerenUE (Union Electric) which covers parts of the Alton area (Madison County IL). About a year ago, they took some of the freq's from the EDACS TRS and created a Motorola Type II site at the same location. It is still on the air. (all frequencies from both sites are on the same license)

Mot Type II

Yes, Dist8, Peoria still uses 155.520.
Have NOT heard Dist10 on their old highband. Dist6 will on rare
occasions use 155.460.

I was near the Moline / East Moline north east border this morning. I could not get East Moline site 107 at all. Even on the drive over. East Moline site 123 was ok as was 122 in Rock Island. I was too close to the bluff in the area to hear any other sites. Even did a search of 866-869 and only got those two sites. I did last hear 107 weekend before last.

3030. PvtData on Site 145

Yahoo group: StarCom21
Date: 2008-12-02 03:05:41 UTC
From: citrus801
Topic: 3030 Message: 3030

Site 145
Pro96com showed "PvtData" on:
855.8625
855.8625
857.2125
866.3500

Radio ids with "PvtData" transmissions were:
651510
651560
651562
651579
651502
651520
651533
651542
651543
651552
651553
651576
658534
658535

Note: No talkgroup shows up with these transmissions. These transmissions were occuring once every 5 seconds or so.

I did still hear a control channel on the old Ameren TRS site 018 in Galesburg. I didn't hear site 019 Aledo or 020 Raritan but I won't guarantee that they are off the air. I didn't do that much investigating in that area due to being too busy listening to the Henderson Co Shf Dept 10-80. Bloomington and Champaign's old Ameren sites are both still active.

One more observation, your radio id's appear to be Ameren
radios. What I saw on 110, appear to be ISP.

The PvtData transmissions have been happening since Nov 13th on the "north zone" towers (T1xx). I travelled to Peoria last week and it doesn't appear to happening on the 200 series towers. I'm not sure what it means, but it appears every radio affiliated with the given tower is communicating data to something (ID 16777213?)

I understand that this is part of the OTAR process (Over the air reprogramming). I have been seeing this on Chicago area towers recently as well, probably as a result of the rebanding efforts.

Topic: 3030 Message: 3035

That Could be what I was seeing yesterday, and Monday. I would notice the scanner would stick on a channel for a few seconds no audio, but just a TG ID, then go on, and it happened on several channels and even on the old VHF frequencies, unless they were testing radios lol.

Mike

Hearing Site 107 from home again. Seems like it might be stronger, have not watched for any different frequencies.

Scanner Master takes your privacy and security seriously.

GRE Scanners on Sale!

GRE scanners are on sale now through January 15th!

GRE just announced this sale and we're excited to pass along the savings to our customers.

GRE has been making scanners since the 1970s for retailers in Europe and for RadioShack in the U.S. They have tremendous experience in manufacturing high-quality scanner products.

There are six GRE models: A base and a portable scanner at the low-end, the mid-range and the high-end. All models are PC programmable (and the high-end are also PC controllable).

(http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4099317&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FPSR_500_Scanner_Package_p%2F01-721206.htm%3FClick%3D65415)The high-end base/mobile (PSR-600) and portable (PSR-500) scanners include trunking and digital and for the first time GRE's new Object-Oriented Programming. The digital voice decoding (http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4099317&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FPSR_600_Scanner_Package_p%2F01-721207.htm%3FClick%3D65415)quality is superb in these radios. They offer alpha-tagging, Spectrum Sweeper, a huge memory and much more.

(http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4099317&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FPSR_300_Scanner_Package_p%2F01-721204.htm%3FClick%3D65415)The mid-range base/mobile (PSR-400) and portable (PSR-300) scanners include trunking but no digital. They offer standard memory (http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4099317&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FPSR_400_Scanner_Package_p%2F01-721205.htm%3FClick%3D65415)banks and channels and are very straightforward to use. For non-digital applications these radios are a great choice.

(http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4099317&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FPSR_100_Scanner_Package_p%2F01-721202.htm%3FClick%3D65415) (http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4099317&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FPSR_200_Scanner_Package_p%2F01-721203.htm%3FClick%3D65415)The low-end desktop (PSR-200) and portable (PSR-100) scanners are fine choices for applications where no digital or trunking is needed.

If you're not sure what you need for your area (or for the area in which the scanner will ultimately be used), please send us an e-mail to support@... and we'll do the research and let you know.

By clicking on the Package Options Link on the above web pages you can order these scanners along with accessories and programming, all at a discount. If you wish to order a scanner programmed and delivered by Christmas you should place your order no later than December 15.

Holiday Showroom Hours
Come visit us at our Boston area store in Natick, Massachusetts on any of the following dates:

Thursday December 11th from 11 AM to 8 PM
Saturday December 13th from 10 AM to 2 PM
Tuesday December 16th from 11 AM to 8 PM
(Other weekday hours available by appointment. Please call 1-800-SCANNER)

We'll be showing and selling all the Uniden and GRE scanners, BuTel Software, our full line of accessories, and our all new Scanner Master Massachusetts, Rhode Island and Southern New Hampshire Pocket Guide - 11th Edition. This book makes a great gift.

Same Day Shipping!*
Gift Wrapping Available.

3039. 700/800 Mhz Channels On the Same Site

Yahoo group: StarCom21
Date: 2008-12-14 22:20:28 UTC
From: Mike Curtis (KC)
Topic: 3039 Message: 3039

I took a short trip to St. Louis and observed both T312 (Mt. Olive) and T324 (Nillwood) having both 700 MHz *and* 800 MHz channels on them as well as Ameren CWIDs. I guess this would be a way to solve the problem of Ameren not being able to use the 700 MHz channels on StarCom? Can you restrict what channels a given talkgroup can use on a trunked system?

ALSO, you can from the veiwing of the data in the software programs just remove the Ameren tagged frequencys, or they do show in my data and this is how I now do not hear all of Ameren radio traffic, BUT if you live in a service area of Ameren, it is interesting to hear when they respond to Lines Down or Outages, so then you would know, (unless you are using house current when the power is going to be restored) Where I live I have deleated not all, just the the tags that are when they are on scene chatting back and forth. I will tell you that when you call into Ameren, there dispatcher will give you NO INFO about a time frame, so by listening on SC21 you will know first hand. Being in Emergency Services, I can hear what they are doing and where.
Following is funny, the other day there was a line down that I called in, and being mobil, while talking to Ameren Dispatch, he gave the wrong location, which I was hearing, when I told him what he gave out was wrong, he wanted to know how I could hear that, told him not to mind that, just give the correct address, which he then did. I thanked him and disconected the celphone call.

3042. Non-ISP units on ISP talkgroups

Yahoo group: StarCom21
Date: 2008-12-25 17:24:19 UTC
From: citrus801
Topic: 3042 Message: 3042

I heard a Village of McLean PD officer talking to ISP D6 on TG 13000. This is the first time I've heard a non-ISP agency using an ISP talkgroup. Makes sense for rural PD's to directly be able to communicate with ISP.

I wonder how much other talkgroup sharing there is between agencies on Starcom21? I know Normal PD and ISU PD have each others talkgroups.

3043. Re: Non-ISP units on ISP talkgroups

Yahoo group: StarCom21

From: Ron H.
Topic: 3042 Message: 3043

My guess is you heard the IREACH patch that conects to the SC21 system,as The ISP radio system does not allow any other agencys to talk on there system. You could also hear ISPREN the same way , but that is ONE frequency that locals have that can work direct with ISP. All of this is info from a Trooper, in his dist. could not talk direct. There are some of the SP cars that have local county sheriffs freq. those where the VHF. But just maybe as there are a few locals that use SC21 this is work now. What you could do, if you have the scanner working thru the software is to LOG this, thus it would give you an ID for that unit. IF so post the results as there maybe something that is not in the RR data files.

From: Rich Carlson
Topic: 3042 Message: 3044

Some small agencies may well have ISP Dispatch talkgroups in their radios as a legacy from the days some of them were dispatched by ISP. If the McLean PD officer was on 13000 then it wasn't an ISPERN or IREACH patch unless the ISP console had a console patch set up.

If anyone in the area is running PRO96COM an6y patches would appear there. If you happen to be watching it when they are talking you can see if it is a console patch as wel as what talkgroups are patched.

A friend of mine is a Village of Plainfield officer, he said that his Starcom radio has only PLFD ID's 1001-1006....He has none of the District5 talkgroups-9013, 9014 etc....I have never heard Plainfield come up on District5 talkgroups....Ron in Joliet

3048. Illinois SP and locals on SC21 or maybe NOT

Yahoo group: StarCom21
Date: 2008-12-27 00:23:54 UTC
From: Ron H.
Topic: 3048 Message: 3048

I wonder if by chance that someone had an ITEC unit out and they cross patched between the ISP and a local PD dept.(SC21 to SC21) (yes they can do this), as when I talked to an SP trooper he said that they could not talk to local pd's or sheriffs dept's, but wished they could. Keep in mind that this is Dist 11, and maybe they do where you can monitor, but would be interesting to KNOW FOR SURE, if this is some change that has been made.

3049. Pro 106

Topic: 3049 Message: 3049

List,
My wonderfull bride of almost 25 years, has givin me a Pro 106 for Christmas, as with the programming cable and rechargeable batteries. Wow, do I feel blessed with a wife who has done her homework.
To make a long story short, I've had regular analog scanners for years now, no issues with programming those scanners,,,,, But this 106 is something else, Now I dont have any programming software, so I'm pretty much programming this beast by keypad. OMG I cant tell you how much I feel..... well .... stupid !!!! I've been able to programm the ISP freqs for Chicago/Dis 02/ Dist 05 and Dist 15. at least I feel prtty confident I have, My problems are.........

Assigning a ISP district specific " tag " to any of the talk " ID's ".

Trying to lockout the ID 2002 maintenance crews from the District 15.

seems that as soon as I try to modify any entry, I'm somehow overwriting previous entered data,,,,,
I've spent hours going over the manual trying to figure out what in the world I'm doing wrong......
Now I'm guessing that programming software may really help. But keep in mind that this way of programming scanners is very new to me,,,,, needless to say, the learning curve is really steep.
Any help with programming the ISP Starcom system will be GREATLY appreciated.
Thanks
Dave

No, it was not a crosspatch. It is exactly what citrus said. The
McLean officer was talking to Pontiac D6 on D6 DISP A, 13000.
I have heard both McLean and Heyworth officers on D6 DISP A numerous
times.
This is not the norm, however it does happen.

George

Maybe not all of the radios have them? Maybe only certain units? (Supervisors and detectives?) For what it's worth, from here in Ottawa, I've logged over 20 Plainfield radios make some kind of hit on 5A in the last 18 months or so. I have seen them on D5's ISPERN and D2's ISPERN as well. I also picked up some traffic between D5 units and what sounded like Plainfield detectives working an op on D5's Detail B (9031) in October while in Shorewood.

In my opinion, just like the DNR seems to have all of the local PD and SO VHF channels in their radios, you'd think the communities with state highways in them that are on StarCom would have ISP talkgroups in their SC21 radios.

Subject: [StarCom21] Pro 106

List,
My wonderfull bride of almost 25 years, has givin me a Pro 106 for Christmas, as with the programming cable and rechargeable batteries.
Wow, do I feel blessed with a wife who has done her homework.
To make a long story short, I've had regular analog scanners for years now, no issues with programming those scanners,,,,, But this 106 is something else, Now I dont have any programming software, so I'm pretty much programming this beast by keypad. OMG I cant tell you how much I feel..... well .... stupid !!!! I've been able to programm the ISP freqs for Chicago/Dis 02/ Dist 05 and Dist 15. at least I feel prtty confident I have, My problems are.........

Assigning a ISP district specific " tag " to any of the talk " ID's ".

Trying to lockout the ID 2002 maintenance crews from the District 15.

seems that as soon as I try to modify any entry, I'm somehow overwriting previous entered data,,,,,
I've spent hours going over the manual trying to figure out what in the world I'm doing wrong......
Now I'm guessing that programming software may really help. But keep in mind that this way of programming scanners is very new to me,,,,,
needless to say, the learning curve is really steep.
Any help with programming the ISP Starcom system will be GREATLY appreciated.
Thanks
Dave

3053. Tag ID on Starcom

Yahoo group: StarCom21
Date: 2008-12-27 20:55:40 UTC
From: dataman60435
Topic: 3053 Message: 3053

When you enter aID on Starcom as you scroll down the menu one
ask's "Tag Channel", you press the "SEL" white button in the middle
and the "cursor" appears, you can then procede to enter your TAG ,
after your finished press "E" then press "F1-SAVE", ...Ron in Joliet

3054. [Fwd: (CARMA) Radio Shack 2096 on sale]

Yahoo group: StarCom21
Date: 2008-12-30 13:03:46 UTC
From: Scan IL
Topic: 3054 Message: 3054

This scanner will receive the 800 MHz Starcom21 sites.
It will receive 700 MHz voice channels in P25 mode with the WIN96 program.

Today was a first, one of the SP cars talked to Tazewell county direct on the SC21 system. Tazewell Coms Center must have re-banded there consoles to be able to do this. Tazewell County and Pekin City is strictly and EDACS system.
Was not logging via software so other than seeing Tazewell/SP car (id ?) thats all I have.

But they don't have RADIOS setting in the com center, everything is done via computer interface on all 6 consoles, touch the screen and answer the call. Or at least as of yesterday there was no Motorola radio setting on a console. But to be sure, I will contact one of the full time shift leaders.

From: n9jig
Topic: 2962 Message: 3059

Please join us at the CARMA Meeting on Saturday, January 3 2009 at Phillies Pizza, 63rd & Kingery Hwy (IL-83) in Willowbrook.

Doors open at 11:00 and lunch is served until 1:00 PM, when the meeting starts.

Please park on the west side of the building, not in front.

Talk-in is 145.770, PL 151.4.

The Wireless Mic is on 171.045.

You must buy your lunch, please be sure to tip our wait staff generously, they deserve it!

See ya there!

Ron,

Any of these dispatch centers, providing they have RF coverage in the StarCom system can access same with a consolette. Basically its a mobile radio in a housing/ power supply that can be integrated to the dispatch console. The resource on the dispatch screen can be name tagged anything and look just like others even though its accessing the StarCom system. The audio and control is transparent to the dispatcher if integrated into the existing console equipment. Another method would be to use a deskset that would be connected to the consolette but it would be external to the existing console infrastructure.

Yes you are correct, been around alot of com centers in the past 40 years, built and tore out and then rebuilt some, still heavy in radio programing, even build some portable type gear.

3062. T112 Reporting as T148 Now?

Yahoo group: StarCom21
Date: 2009-01-03 05:42:44 UTC
From: Mike Curtis (KC)
Topic: 3062 Message: 3062

I was driving down I-90 towards Rockford today and noticed a "new" tower pop up in site affiliations - T148 ... After a little more travel down the road and investigation, it turns out T112 (Belvidere) is now calling itself T148. Is this a "glitch" (like when other towers seem to shift their IDs off - T101 becomes T010, etc) or is this something more permanent?

3063. Re: [StarCom21] T112 Reporting as T148 Now?

Yahoo group: StarCom21
Date: 2009-01-03 15:21:06 UTC
From: Rich Carlson
Topic: 3062 Message: 3063

I might take a ride that way after the CARMA meeting today, I wonder
if perhaps this is due to the upcoming use of StarCom21 by Rockford,
perhaps a new site is in the works.

If this is so, where would Site 147 be? When they added the new
McHenry County site they used the next site number (146) so it would
make sense that the next newest would be 147...

I use ScanCat Light Plus from Computer Aided Technologies to program my Pro97 scanner. This software works great and is cheap! It is easy to use and has one button programming. I have had my copy for about three years now and never once had an issue with it. I also use it to program other scanners for friends and family. The switch between scanner models is very simple and you never lose data (as each file is stored separately).

According to the ScanCat website <http://www.scancat.com/> (http://www.scancat.com/ <http://www.scancat.com/>), you can use the same cable for both Pro97 and Pro2096 scanners.

ScanCat Gold is a program that allows you to control your scanner from your computer, while listening to your scanner. This program is not compatible with either of your scanners and I was unsuccessful in finding one online that is compatible. If I ever find one that would work, I will let you know.

I hope this helps you. Happy New Year!

Ron,

Most hobbies are also investments. That said, ScanCat Light Plus is about $30 (if I remember right) and all info about it can be found at www.scancat.com (see my previous message with lazy link and full link). Also, I personally feel that radio scanning and ham radio is hobby worth investing in.

Everyone,

If you find a better program (especially one that is computer controlled) pleas let us (me) know as I could ind a lot of use for this.

Thanks!

I also use Butel, but find that BCtools seems to do ok for the price ($0.00), but I did donate a token amount.
Most of what I do with Scanners, Commercial Radio and Amateur Radio is for Emergency Services. Ron H. "K9EOC"

Ron,

Most hobbies are also investments. That said, ScanCat Light Plus is about $30 (if I remember right) and all info about it can be found at www.scancat. com (see my previous message with lazy link and full link). Also, I personally feel that radio scanning and ham radio is hobby worth investing in.

Everyone,

If you find a better program (especially one that is computer controlled) pleas let us (me) know as I could ind a lot of use for this.

Thanks!

3074. Re: [StarCom21] T112 Reporting as T148 Now?

Yahoo group: StarCom21
Date: 2009-01-04 04:18:07 UTC
From: Rich Carlson
Topic: 3062 Message: 3074

While I didn't get out to the area today I might try tomorrow.

I did ask Fred to monitor the sites that he could as he lives closer
than I. He reports that from both 120 and 126 he saw 148 reported on
868.3375, the normal control channel for 112.

I am going to suggest that this is indeed a new number for 112. I
wonder if they are planning a simulcast set for 148 (former 112) and
replaced the controller for this reason. If so the question comes up
as to what happened to 147?

3075. SC21 T359 St Clair County - REBANDED

Yahoo group: StarCom21
Date: 2009-01-07 19:01:35 UTC
From: Terry
Topic: 3075 Message: 3075

The St Clair County system on T359 has appeared to possibly "finished" the rebanding process.

The Control Channel is now 851.225. 866.225 is no longer a control channel
The only voice I've noted so far is 851.5625

If someone can run pro96com on this tower is would be great.

According to the license, these are the new frequencies:

2359

D11 St. Clair (County Simulcast) [R]

851.07500

851.17500

851.22500

851.56250

851.70000

851.80000

852.08750

852.16250

852.18750

852.58750

852.70000

852.75000

853.13750

853.63750

853.75000

853.85000

Old Frequencies

359

D11 St. Clair (County Simulcast)

866.07500

866.17500

866.22500c

866.56250a

866.70000

866.80000

867.08750

867.16250a

867.18750

867.58750

867.70000

867.75000

868.13750

868.63750

868.75000

868.85000

Thanks!
Terry

Its operating like that right now.

RadioReference.com has already been changed/added.

The old site data has been retained for short term.

3078. SC21 Site 147

Yahoo group: StarCom21
Date: 2009-01-10 04:07:20 UTC
From: Rich Carlson
Topic: 3078 Message: 3078

Earlier it was reported by Mike Curtis that the Belvidere/Boone County StarCom21 site 112 was now reporting as 148. This was later verified by Fred and myself.

Today I observed a Site 147 being reported in Pro96Com while monitoring Site 120. It is showing as "Failed, Current" and thus no control channel has been reported.

There seems to be some changes in the StarCom21 system. I am suspecting that it may be due to rebanding, perhaps they are using these site numbers to facilitate the process.

Are there new Site numbers being observed in other Zones as well?

3083. Lots of SC21 Rebanding Information

Yahoo group: StarCom21
Date: 2009-01-12 07:25:07 UTC
From: Scan IL
Topic: 3083 Message: 3083
Attachments: 5 described; binary payloads are missing from this source WARC

from http://www.illinoisrebanding.org/

About the Illinois Radio Rebanding Project:
In July of 2004, the Federal Communications Commission (FCC) ordered the reconfiguration of the 800 MHz band to migrate incompatible systems to separate sections of the bandwidth. The FCC is requiring Sprint/Nextel to pay all reasonable relocation costs incurred by public safety agencies. This “re-programming” (also know as “rebanding”) of radios was to take place prior to June 26, 2008 – but extensions have been granted. For more background on the rebanding effort, try this FCC link, (http://www.fcc.gov/pshs/public-safety-spectrum/800-MHz/reconfiguration.html) the Transition Administrator Link (http://www.800ta.org/), or the Association of Public-Safety Communications Officials (APCO) link (http://www.apcointl.org/frequency/AFCREBANDING.html).

The impact on this FCC order in Illinois is widespread and significant. All StarCom21 radios must be physically reprogrammed at least once. There are basically 3 groups of StarCom21 subscribers:

1. State agencies such as the Illinois State Police, Dept. of Corrections, Secretary of State, Natural Resources, etc.
2. Local agencies that purchased StarCom21 radios and systems on their own such as McLean and St. Clair Counties (note that this includes all ITTF radios in St. Clair County).
3. Radios purchased by the Illinois Terrorism Task Force (ITTF (http://www.ready.illinois.gov/ittf/)) with Federal funds and distributed to local agencies and universities/colleges from 2004 through 2008.

The Illinois Department of Central Management Services (CMS (http://www.cms.illinois.gov/)) is the state agency overseeing the entire rebanding process for all these groups. Motorola has been contracted to do the actual technical rebanding and reprogramming work. The Illinois Law Enforcement Alarm System (ILEAS (http://www.ileas.org/)) has been contracted to support the rebanding project by overseeing the rebanding of the StarCom21 radios issued to local agencies by ITTF. There are approximately 2,900 radios owned by 2,000 different local organizations that ILEAS must coordinate.

It should be noted that every agency that brings a StarCom21 radio in to be rebanded, will receive between $88.18 and $119.70 per radio (depending on radio model #) from ILEAS. You will get paid to get your radios rebanded!

There will be multiple opportunities to get the reprogramming done and you will receive multiple notices reminding you. But at some point, if you do NOT reprogram your StarCom, it will no longer work and ITTF will probably ask for it to be returned.

If you have additional questions, please review the Frequently Asked Questions (FAQs) page.

You can also read more about the program from this letter from ILEAS, MABAS, IESMA, and ITTF signed.

You can find more information about the StarCom21 radio project at the ILEAS website.

(http://www.ileas.org/Current%20Programs/Radio_Programs/main.htm)
(http://www.ileas.org/Current%20Programs/Radio_Programs/main.htm)

Statewide Rebanding Locations:
How to use this map: This is a statewide map of locations where your StarCom21 radios will be rebanded. As you proceed with scheduling your radios for rebanding, this map will be replaced with a dynamic map detailing each of the locations currently marked. You will need to select one of these locations to take your radios for rebanding.

Green dots represent rebanding locations that have expired.
Red dots represent the current or next rebanding location.
Blue dots represent future rebanding locations.

Rebanding Progress:

The following graphs represent up to the minute progress on the Illinois Radio Rebanding Project:

Number of radios rebanded:

Purchase Order Progress

Agency Reimbursement Progress:

1. What is 800MHz rebanding? 800 MHz rebanding is a FCC mandated process by which Public Safety land mobile radio frequencies (NPSPAC channels) are being relocated within the 800 MHz spectrum. The reason for the relocation is to alleviate interference issues on Public Safety networks. However, before the Public Safety Agencies can be relocated, additional space in the 800 MHz spectrum must first be cleared. Please refer to www.800ta.org (http://www.800ta.org) for additional information on rebanding of the 800MHz band.

A portion of the State of Illinois 800 MHz Rebanding effort, which involves the planning, negotiation, and reconfiguration of the STARCOM21 Network, is being managed by the State of Illinois Central Management Services in conjunction with the Illinois Law Enforcement Alarm System (ILEAS). ILEAS has been contracted by the State to oversee and manage the rebanding of the ITTF STARCOM21 subscribers in cooperation with Motorola and Sprint Nextel. This part of the rebanding process is scheduled to take place over a 4 month period spanning the timeframe of August to December 2008. [return to top]

2. Does Rebanding affect my ITTF radios? Rebanding only affects you if you operate on the STARCOM21 system that includes all NPSPAC 800MHz frequencies. If you have not been contacted and are affected by this rebanding project please contact ILEAS. If you have received a StarCom21 radio from MABAS, IESMA, ILEAS, or any other committee of the Terrorism Task Force, this applies to you. If you have received notice from ILEAS, please use the scheduling tool to schedule to have your equipment reprogrammed. Following the FCC Report and Order is mandatory for all affected subscribers so active involvement in the Rebanding process will facilitate completion of your system modifications in the timeframe designated by the FCC. [return to top]

3. What changes do you have to make? There are several changes that may be required on your STARCOM21 radio equipment. These changes can include rebanding and/or reprogramming. Again, please refer to this website, or check with ILEAS at www.ileas.org (http://www.ileas.org/) or, by telephone at 217/328-3800 for details regarding rebanding requirements. [return to top]

4. How long do you have to make the changes? The actual time that you have to make changes depends on a variety of items, but in principal it depends upon your geographic location. ILEAS is working with Motorola Service Shops statewide to complete the rebanding. The Implementation Wave will begin in southern Illinois and roll north. This process will start on or about August 11, 2008. The time allocation is approximately four months from start to finish. [return to top]

5. How can you get started? You can get started by visiting the schedule tool to schedule your department for rebanding. ILEAS will coordinate with all Motorola Service Shops to ensure impact is minimal as far as time and travel are concerned. Additionally, you can contact ILEAS directly via www.ileas.org (http://www.ileas.org). [return to top]

6. What is involved in making these frequency switches? In most cases it can be accomplished through “re-tuning” of existing radios, usually by connecting each radio to a laptop and keying in the frequency change. Depending upon the configuration of the radio system, some radios may need to be re-tuned twice to ensure a seamless transition. Certain other system changes may also be needed in some cases. Software re-programming will be needed for some ITTF provided StarCom 21 radios. [return to top]

7. What specific radios need rebanded? Any StarCom21 radio needs rebanding. This includes the following models:
- XTL5000 – Mobiles

- XTL5000 – Control Stations

- XTS1500 – Portables

- XTS5000 – Portables

- XTL5000 – Consolette

- KVL3000 – Key Loader
8. Do you need buy new radios, and if so who pays for that? Subscribers will not need to replace grant funded radios. Only National Public Safety Advisory Committee (NPSAC) 800MHz frequencies will require rebanding. This includes all ITTF provided STARCOM 21 radio equipment. For further information please refer to www.800ta.org (http://www.800ta.org). [return to top]

9. What if you choose not to participate? Since the radio equipment was provided with grant funds, any subscriber who has ITTF provided radios and elects not to participate; those radios will be collected from you and reassigned. [return to top]

10. Who will do this rebanding? Subscriber’s will have the rebanding done by Motorola at designated Motorola Service Shops in as close proximity as possible. The costs will be paid from the Nextel funds, directly to ILEAS who will then pay the subscriber a flat rate fee per radio rebanded for their inconvenience. A reimbursement schedule will be posted on this website. [return to top]

11. Who administers the re-banding process? The State of Illinois, Central Management Services has contracted ILEAS to administer this project. [return to top]

12. What is the role of ILEAS? ILEAS will establish a re-banding schedule for each of the three Motorola Zones (3-South, 2-Central and 1-North). ILEAS will provide project oversight and administrative support, management, accounting, field asset and special projects staff. [return to top]

13. What is the timing of this process? Departments in Zone 3 (Southern Illinois) will begin the rebanding process on or about August 11, 2008. Rebanding will be completed in Zone 3 in approximately thirty days and progress into Zone 2 (Central Illinois). Zone 2 will require approximately 45 days to be completed. Zone 1 (Northern Illinois) will be the final area to be rebanded with an estimated time of completion to be sixty days. It is the intent of ILEAS to complete all three zones no later than December 31, 2008. [return to top]

14. How will Nextel pay for the costs of re-tuning? Each rebanded subscriber will be logged and approved by ILEAS which will in turn allow the State to acknowledge the completion of the work to Nextel. This authorizes Nextel to make payments directly to ILEAS who will then reimburse each subscriber as specified in the negotiated agreement between the State and Nextel. The subscriber will be paid a flat fee per radio rebanded for their inconvenience. [return to top]

15. Do subscribers need to pay for the rebanding and then get reimbursed? No. The rebanding agreement between the State and Nextel specifies that all compensable rebanding costs are to be paid directly to rebanded subscribers from Nextel funds. [return to top]

16. Can agencies in the midst of implementing a new 800 MHz system obtain extensions of their construction deadline so radios can be deployed with the new channels? Yes. The FCC indicates in the order that it will entertain requests to extend construction deadlines for licensees that have commenced some aspect of system construction but cannot proceed until new channels are specified. [return to top]

17. Will there be a “freeze” on new applications? Not yet. However, there will be a freeze on new applications in each Illinois Motorola Zone during the period from the Public Notice of the initiation of voluntary negations in that region until 30 days after the end of the mandatory negotiation period for that region. The freeze does not apply to applications for modifications that do not extend the coverage area of existing systems. Waivers of the freeze will also be entertained. Please use the link www.800ta.org (http://www.800ta.org) for additional information. The deadline is June 26, 2008 for all waivers. [return to top]

18. What about interference that occurs before, during or even after the re-tuning process? The FCC adopted “Enhanced Best Practices” which contain stringent new rules to require those causing interference in the 800 MHz band to correct such interference. [return to top]

19. Will there be any additional 800 MHz spectrum available as part of the rebanding? Yes, one of the significant benefits of the FCC’s order is that approximately 4.5 MHz of additional 800 MHz band spectrum will become available for new and expanded public safety operations once Nextel vacates all channels below 817/862 MHz and certain other frequency changes are completed. [return to top]

20. When will the new channels become available, and does public safety get priority? Eligibility for the new channels, followed by two years when eligibility will be shared with “critical infrastructure industry” (CII) subscribers. Thereafter, all Part 90 non-cellular entities will be eligible. Clarification and/or modification of the FCC’s order may be necessary to ensure that public safety get the full benefit of the three-year and two-year periods. [return to top]

21. What does the 1.9 GHz band have to do with all of this? In exchange for Nextel agreeing to reduce its spectrum holdings in the 800 MHz band, giving up spectrum in the 700 MHz guard band, and paying for all of the transition costs, the FCC has assigned new spectrum in the 1.9 GHz band to Nextel. However, to the extent that the value of the spectrum that Nextel gives up and the cost of re-banding is less than the value of the 1.9 GHz band ($4.85 billion), Nextel must pay the balance into the U.S. Treasury. [return to top]

22. Can you get any STARCOM 21 radio rebanded, or only those provided by the ITTF? Only affected radios provided with ITTF grant funds are being managed by ILEAS for this rebanding project. [return to top]

Videos to assist in preparing your StarCom21 radio for rebanding:
http://www.illinoisrebanding.org/video/video.aspx

ILEAS has put together some PowerPoint presentations that will walk you through the radio preparation process. The buttons below will play Flash videos. You will need Flash installed on your computer to run the videos. Most modern browsers support Flash video. If the video does not play automatically, make certain you click the bar at top and authorize the video to play. You can also download all of the presentations as a PowerPoint show by clicking on the blue button (the PowerPoint show is a large download).

carmachicago@yahoogroups.com

This site has rotated off of the standard published control channel. Current control channel is 774.53125.
RR shows this as a voice channel, not an alternate control channel.

I've noticed a lot of traffic on ISPERN the last few weeks that is Car to Car Disgtrict Chicago audio being re-transmitted over 155.475 MHz.. Not sure if it's troopers on the wrong channel or system error. It's really going to be an issue if it happens to be covert/intelligence radio traffic being re-broadcast on ISPERN in error.

Looks like they had a routing error on the system last night. I was hearing Dist 8, 9, and 10 here on the Du Quoin tower, with a mixture of talk groups, mostly Disp A but some patch activity out of Dist 9.

Ullin reported hearing Dist Chicago. I spoke with a friend from Indiana on 75 meter HF who was driving down 55 south of Springfield, he was hearing Dist 13 up there. My log shows the last transmission from Dist 8 was 2:53 AM, Dist 10 was at 3:25 AM. Some Dist 9 hung in until 4:18 AM. Looks like the bat wing boys had a late night.

Found the above link. Doesn't require the teamspeak install and should play from most media player type programs that will handle a .m3u file format web feed. In general, fire up your media playing program, select it to open an URL or web feed and paste in the above address. Takes a few seconds to buffer.

3091. TG-9051: District Chicago ISPERN

Yahoo group: StarCom21
Date: 2009-01-24 17:47:24 UTC
From: Jack Waterman
Topic: 3091 Message: 3091

Query: I'm stumped. I monitor StarCom21 on Site 108, the Lake County Simulcast site. I receive lots of traffic on TGs from District 2, District Chicago, and "District 15" and many of the state-wide groups very well on my 996T. But TG-9051, the District Chicago ISPERN patch, is never, ever clear. It's always garbled and usually just 30-45 seconds or so of noise with barely intelligible voice-sounds in the background.

Does anyone else experience this? Any ideas?

Hello Jack, I've noticed the same thing. In fact as I type this 9051 is emitting noise with very low unintelligible audio. It seems to me that they have technical problems cross patching ISPERN. It almost sounds like it keyed up with folks talking in the background.

With a 996 here and 3.01 firmware. Better than before, but I tweak it when it sounds crappy. Still has occasional control channel drop outs which I hear is common on all the newer digitals due to different decoding format used for simulcast sites. Now if the next firmware would address this...we'd have a winner!

I hear this frequently on ISPERN Starcom transmissions in many locations around the state. It seems to be a universal problem with ISPERN patches. Not all are garbled, but many are.

I think a combination of the updated firmware for the 396, plus continued tweaking by Motorola, plus a dose of wintertime atmospherics makes Starcom21 sound better than ever these days. Except for things like the ISPERN problem you listed and the occasional problems that plague all digital systems, which even impact authorized users of the system!

Topic: 3093 Message: 3098

Well, as far as I've ever been able to tell... in my opinion...

Its not necessarily a digital problem but a problem with the simulcasting/patch of the VHF.

But what you are experiencing could be different than what I have in the past.

Most of the kinks seem to be worked out in the District 18/11 areas, but used to be really hard to understand the TG.

A problem that happens occasionally is that it gets stuck in a wierd mode of what seems like the patch is simulcasting it self or other remote towers some times.

The patch can pick up ISPERN towers from far away, like district 11 often picks up District 12 and 13 broadcasts....

Also, not sure how everyone elses area is working now, but the patch rebroadcasts both mobile units on 155.475 CSQ and 155.475 67.0 base stations (and assume CSQ base stations too).

Not sure how tight the squelch is set, but if it's too tight, could end up picking up any kind of signal or interference's.

Just some opinions and finds of mine!
Hope it gets better.

Thanks
Terry

Using the 996t, and it is not all problems on just the ISPREN patch, but at times will hear what appears to towers not syn. or more than one tower hearing the same mobil. COLD weather, very well could be !! This is in the area of Peoria, Woodford, Springfield and the Manito Tower. Maybe the actual radios are not having the same problem, we the scanner listeners will go with what we have. It sure is nothing to do with the 996 update, as the other scanner that is not fully updated hears the same problem.
Where I live, 4 miles from the Manito tower seems to be more than enough scanner traffic. Just what I hear, and no comment toward solving the problem. I'm happy to have it working this well.

I seem to hear the ISPERN broadcasts from District 1 and 7 with little garbling but I do hear unknown transmissions that are totallly unreadable. But they are too short to be ISPERN broadcasts. But then they may be out of state (IL).
I'm lucky to hear the only tower (107 East Moline) I can get being just over the border in Iowa. Some nights I get no transmissions from the tower.

I am a newbie. Could someone explain why
there is a 225-235 range showing up on some freqs? And does that mean I can
monitor any Site in the state, or just the ones in my area? Anymore info you
can supply would be most appreciated. Thanks.

I'm no guru on this, but I suspect you have GPS enabled, which when using a GPS with the scanner, and setting the range, it maybe what you are seeing. Just a shot at the problem. Ron H.

I am not sure what you are seeing, but I was on the RR website and
didn't see it. I was at the Starcom21 page
http://www.radioreference.com/apps/db/?sid=2324

What sites are you seeing it on?

Mike

Range Rings, could not find the map but am thinking that the circles
around a site, are range of the tower, just there to show how the
towers overlap to cover the way SC works. Nothing more. But does let
you see if you want to use just what is in the range of a tower in
your location. Maybe this is what your are talking about.

Well if it's not updated on RadioReference, then there probably is no newer list available

In that case, you try to monitor them as best you can and try to determine what they are submit it to RR

From: SC21
Topic: 3101 Message: 3112

Its the default radius for the whole state from a centerpoint of the state, the system has this setting.

I'm not sure where you can see this, but on my Admin page, I have this entered:

Location Defaults
Edit

Lat: 39.70718665682654 Lon: -89.05517578125 Range: (225)

Each site is supposed to have its own coordinates and radius. I thought I fixed most of those last week that did not have one specifically for that site.

If you click on a site name; you will see: (like this on T1010

System Name:

* StarCom21 - Illinois -- 700/800 MHz (Statewide P25)

Location:

Statewide, Illinois

Site Number:

Decimal: 101 / Hex: 65

Unique DB Site ID:

10158

Site Description:

DuPage County [Simulcast]

Site County Location:

DuPage

Site License(s):

WPTZ798

Site Neighbors:

115

Site Location:

Toll Authority Tower - Lisle

Site Connect Tone:

None

Site Modulation:

None

Site Notes:

Toll Plaza 73 Addison; Argonne Labs; Lockport

Latitude

N 41.869561

Logitude

W -88.132324

Range

35 Miles

If you know of a specific site that says 225 miles and not it's own coordinates, let me know And I'll update.

New TG I heard today: T359 --- 7214, calling CENCOM? (possibly Ofallon Fire)

Also, been hearing this one the last week: 7961, with a dispatcher. This TG does not fit in anywhere in the listings of things we have heard in the past.
I'm hearing addresses of Riggin? @ Canterberry?, Redwood Lane, !5th Street Exit
Very active today.

Listed right before all the sties/towers is this line:
Click a Site Name for additional site information | Site Map:
FCC Callsigns http://www.radioreference.com/apps/db/?action=siteMap&sid=2324&type=fcc
RR Locations http://www.radioreference.com/apps/db/?action=siteMap&sid=2324&type=rr

From: SC21
Topic: 3113 Message: 3113

Very interesting!!!!!!!!!!!

Also, 867.1125 is showing as control channel on site 325.
This site has been, up until now a 700 MHz site with a 800 mhz voice
channel for Ameren.

867.1125 was recently licensed to Madison County as an STA.
Somehow I missed this in the recent FCC applications.

It is located in Edwardsville at: 5504 New Poag Rd
This appears to be the same location as the previous 700 MHz site (even
though address is listed differently, the tower ID is the same)

****Just identified 7961 as TROY POLICE DEPARTMENT.*

From the license attachment:/*
Attachment to State of Illinois STA application for Madison County, IL:*/
The attached application is a request for a Special Temporary
Authorization to add four pre-rebanding NPSPAC frequencies to an
existing StarCom21 station. These frequencies will be used to replace
existing frequencies at a 700 MHz trunked site so that those 700MHz
frequencies will be able to be moved to improve grade of service in
other areas of the system. These frequencies are pre-rebanding NPSPAC
frequencies which we are no longer eligible for
licensing on, but are needed nonetheless until rebanding is complete and
we can apply for the post-rebanding NPSPAC frequencies. We are not
currently scheduled to begin rebanding our fixed network equipment until
June 2009. Any questions regarding this matter can be directed to Jeff
Sexton, who is listed as the contact person for this application.

Note: The Pro96com file from below is from T312 not T325.

I was just reviewing the sites in the area early, I've always noted it,
but Bond, Clinton, Washington counties do not appear to have good
coverage in those areas. Maybe a new site will be coming for those area
soon.

Thanks for the great find ED! I'm sitting right next to the old tower
and didn't even know it was "gone"!!!

I have updated RadioReference.com

Terry

To: <carmachicago@yahoogroups.com>

Greetings,

I don?t know if this was posted by me or not but
Tower 312 is using 775.0312 as the control channel.

Also note from Pro96.com file that Tower 325 has

a complete different frequency 867.1125.
RR and CARMA do not show any 800 Mhz freqs on that tower.
See attached PRO96.com file.
I took a trip down to Dist 11 with no luck, the scanners
just showed info but no sound on many frequencys.
More work is needed ***^&$)@$%Y%&.

3116. two truly interoperable handheld radios

Yahoo group: StarCom21
Date: 2009-01-27 22:41:55 UTC
From: Cris Hanna
Topic: 3116 Message: 3116

Thought this stuff might be of interest

http://www.rfcomm.harris.com/talkasone/default.asp

The XG-100P covers all portable land mobile radio frequency bands in a single radio. With

frequency coverage across the VHF, UHF, and 700/800 MHz bands, extended battery life,

and full APCO P25 compliance, the XG-100P enables interoperability with responders

from any agency, whether operating on analog or digital. The ability to scan continuously

across all bands, voice modes, and encryption types puts unprecedented connectivity in

the hands of the user.

Able to store multiple mission files, each capable of storing 1,250 channels, the XG-100P

can be completely reconfigured from the front panel. A first for land mobile radios,

wireless radio-to-radio cloning allows in-the-field programming of multiple radios without

the need for cables.

If you wish to see more specs on this radio, here is a link to the PDF

http://www.rfcomm.harris.com/talkasone/pdf/XG-100_Unity_Radio.pdf

A second unit is available, aimed at federal agencies:

Features of the RF-1033M include continuous frequency coverage from 30 to 512 MHz

and adjustable transmit power up to 5 watts across all bands. The radio optionally

includes an internal GPS receiver to display local position.

By supporting both digital APCO P25 secure and analog FM/AM communications across

the VHF low-band, VHF high-band, and UHF public safety bands in a single portable radio,

responders can now communicate with multiple jurisdictions and agencies operating on

many different frequencies and systems.

PDF is here:

http://www.rfcomm.harris.com/talkasone/pdf/RF-1033M.pdf

It's a great radio to say the least, and a GREAT PRICE, but I live in Illinois, so money is tight, we probaly will never get a grant for even ONE. And its for sure the Govenor won't want to pull a favor to get a few for Emergency Services.

From: Cris Hanna
Topic: 3116 Message: 3119

Oh I live here too.

But we still need to stay abreast of the technology that's out there

From: StarCom21@yahoogroups.com [mailto:StarCom21@yahoogroups.com] On Behalf Of Ron H.

Subject: [StarCom21] Re: two truly interoperable handheld radios

It's a great radio to say the least, and a GREAT PRICE, but I live in Illinois, so money is tight, we probaly will never get a grant for even ONE. And its for sure the Govenor won't want to pull a favor to get a few for Emergency Services.

Yep, GRANT this and GRANT that, and the unemployment is going up, I can not eat radios, and they don't make much heat. I trust the New President will show common sense and stop letting FEMA do what they want with my tax dollars, Give me ONE good reason for a $4500.00 portable radio ?? Thats why we have ITEC and Interoperabilty UC Vans, which already have this system. End of my comment!

Well I know that about the unemployment thing..
I know about ITECS I am on of the TECHS on ITECS 11
But will be nice when the state will give us the StarCom radio
to go in the units

If I have already programmed my BCD996T to the SC21 sites, how can I enable
I-Call
on these sites?

I presume that you are using software, so just read the scanner, and check the I-call status.(selected or not selected) If you did this manualy, then it is in the menu of the scanner. Hope this is the answer you need.

Thanks Ron I went through the SC21 systems and found some sites that did not
have
the I-Call enabled. Great. David N

From: SC21
Topic: 3124 Message: 3133

I have to say, that I've had I-CALL enter on starcom21 since day 1 (of me having the scanner - about 1 1/2 years) and have never heard one.

I believe what I was told, was that SC21 is capable of I-CALL, but they don't have it set up to at this time.

I could be wrong.

3134. Monroe County IL licensing Starcom21 Sites/Frequencies

Yahoo group: StarCom21
Date: 2009-01-29 08:15:40 UTC
From: SC21
Topic: 3134 Message: 3134

Appears to be a 3 site simulcast system.

I would assume these would be used in conjunction with the existing SC sites.

This county has very little radio traffic, so the 2 frequencies assigned to them, in most cases, would be enough.
Also, there are 50 FX1s (Input bases) for this system, enough for every law, fire and EMS I would assume.

3137. Re: [StarCom21] STARRS ???? P25 800 MHz Sites

Yahoo group: StarCom21
Date: 2009-01-29 13:11:01 UTC
From: David Nordmann
Topic: 3135 Message: 3137

Thanks for sending the info on the new systems in St Louis County and St.
Louis City. What
present agencies will these 2 new systems replace?

On Thu, Jan 29, 2009 at 3:29 AM, SC21 <RadioReference@...> wrote:

3138. Re: [StarCom21] STARRS ???? P25 800 MHz Sites

Yahoo group: StarCom21
Date: 2009-01-29 16:32:07 UTC
From: David Nordmann
Topic: 3135 Message: 3138

Also regarding the new City and County Motorola Type 2 systems, will there
be controls channels assigned later, and how long will it be before this
system is implemented? David N.

3142. SC21-St Clair Co

Yahoo group: StarCom21
Date: 2009-02-02 01:19:03 UTC
From: David Nordmann
Topic: 3142 Message: 3142

Could someone help me access SC21 talkgroup ID's for St. Clair County on RadioReference? I've searched and can't seem to find them. Thanks

3143. [Fwd: [BCD396XT] ProScan Version 1.8.3 is out!]

Yahoo group: StarCom21
Date: 2009-02-02 01:26:13 UTC
From: SC21
Topic: 3143 Message: 3143

```
ProScan Version 1.8.3 is out!
-----------------------------

Changed the recorder from mono to stereo
Added an Audio Control tab showing a block diagram of the audio flow
with level indicators and volume controls.
RadioReference database import conforms to the RadioReference web
service version 3.1.
Added a RadioReference database search.
Added a direct frequency tune control to the DMA scanner types.
Added shortcuts to the recorder Play, Stop, and Next buttons.
Recorder shows the file playback in green.
Added a font selection to the display options.
Fixed a bug where the talk group logging hits was not updating
properly.

Many more improvements and small bug fixes.

ProScan is the most technology advanced Computer Aided Scanning
software that's feature rich with the friendliest user interface.

Try the 30 day fully functional trial and see for your self.

ProScan supports the BCD996T, BCT15, BCD396T, BR330T, BC796D, BC785D,
BC780XLT, BC296D, and the BC250D Scanners.

They are listed int he Starcom21 database page at
http://www.radioreference.com/apps/db/?sid=2324, scroll down about 3/4
of the way down.

Yes as Rich said, the Starcom database page is a little hard to find sometimes. You have to go to IL, then go to the ISP selection from the selection on the right, then near the top of the ISP page it talks about 700/ 800 MHZ ISP P25 System click that and it goes to the link Rich Posted.

Enjoy!

Mike

From: SC21
Topic: 3142 Message: 3149

Actually when you go to the main IL page, there is a link to SC21 right above all the listed counties, under "Areawide Trunking Systems in Illinois">

Also, it can be access from the Trunking Tab on the IL page or under any county in Illinois.

Terry

3150. Notes - T321, 325, 355, 227 Notes & Changes

Yahoo group: StarCom21
Date: 2009-02-03 04:37:38 UTC
From: SC21
Topic: 3150 Message: 3150

Tower 321 - Mt Olive
Control Channel (a) confirmed, all others listed were confirmed in use as voice channels.
This is a very active site, due to the fact there is no site in Montgomery, Bond or Clinton Counties. Very Active with District 18, 12 and sometimes D9 & D10 traffic.
775.03175d
775.84375v
855.73750v
775.53125a
774.03125v
855.38750v
Even both of the 800 MHz channels were being used by the ISP on Sunday, these have been licensed by Ameren to use on a Public Safety 700 MHz site.

*Tower 325 - Edwardsville */(site now 800 MHz, licensed by Madison County)/
I don't remember what the last pro96comm file read, but I'm finding:
854.0125 as a voice channel, this frequency is not licensed at this site, but is licensed by Ameren (on their old Type II system) on Mt Olive, Fairview Heights and other sites.

Tower 355 - Godfrey
Madison County has licensed 852.6625 and 853.0875 on the SC21 tower.
Often, 853.0875 seems to be used mostly for Madison County Sheriff traffic.
(Madison County Sheriff patrols the city of Godfrey)

Tower 227 - Taylorville
857.2125 was control channel, currently not listed on RR as control channel (868.425 was)
867.375 (i had .35 written down) and 868.425 were voice channels
/**I hope I didn't misread this and make a mistake, but its what I had written down/

Thanks!
Terry

3151. Springfield City application for P25 Frequencies

Yahoo group: StarCom21
Date: 2009-02-04 06:30:02 UTC
From: SC21
Topic: 3151 Message: 3151

Moving to SC21? Not that anyone knows of..... BUT....

APPLICANT IS A CITY POLICE AGENCY

3152. TG 13106

Yahoo group: StarCom21
Date: 2009-02-07 00:58:21 UTC
From: SC21
Topic: 1678 Message: 3152

TG 13106 hearing encryption er uh well actually it was Spanish!

T325 Edwardsville 18:56... sounded like a woman talking to her self

Previous Notes:
13106 - heard 7 Ida 121 calling 10-41 at 9am, with no response (2/3/09)

3153. TGID - 2046 on Site 115

Yahoo group: StarCom21
Date: 2009-02-09 16:08:04 UTC
From: Don
Topic: 3153 Message: 3153

Lately I have been hearing a lot of traffic on this talk group. It sounds like a patch of some type, with MDC signalling at the end of the transmission.

I have heard the mobile units calling "PORTAGE" and have also heard mention of "PORTER COUNTY". This is in NW Indiana - why is it showing up on StarCom21?

TGID - 2046 is not listed on any websites either?!?!

3154. DeKalb City Site

Far as I know IN also has a system somewhat like SC21, but not the same name, this also is the case for other States, I don't think it is a patch. I would presume that you live more on the East side of Illinois. There is people from IN in this group, so they may have a better idea of what the system is in IN, and does it work the same screwed up way the SC21 does at times.

Also, I researched the Indiana SAFE-T system earlier, and they have no such TG.

2043 and 2048 (?) are both already listed as I-REACH patches, so a good possibility.

Terry

I'm still researching, but it could be an I-REACH patch.

The city of Portage in Porter county uses 155.055 as a repeater for
police dispatch.

Terry, you hit on the reason. Maddening as it is, the town of Portage, IN uses 155.055 as their police dispatch channel, even though they are only 20 miles from the Illinois state line. This means that their PD dispatch is the same frequency as I-REACH in Illinois, which gets picked up and broadcast on SC21 TG 2046.

3159. Possible New SC21 site in metro east

Yahoo group: StarCom21
Date: 2009-02-10 21:29:54 UTC
From: SC21
Topic: 3159 Message: 3159

Could someone run pro96com on the edwardsville or st clair county sites
to see if there is a new associated site, possible T360?

I have a feeling its on now.

Thanks
Terry

3160. Re: [ScanMetroStLouis] Possible New SC21 site in metro east

Yahoo group: StarCom21
Date: 2009-02-10 21:56:07 UTC
From: SC21
Topic: 3159 Message: 3160

OK... I could be wrong about a new site... Didn't find anything manually.

BUT, T301 Mascoutah (St Clair) now has control channel *775.34375*. It
was formerly
301 Mascoutah [St Clair] [A800]
</apps/db/?action=siteInfo&siteId=9250> 774.03125 774.56875c
775.28125 775.53125 775.78125 855.16250 859.33750

I heard radio tech's talking about how good the quieting was on the
"site" and the techs are hearing the site well in Addieville and
Nashville. (Washington Co IL)

I've said before, that Montgomery, Bond, Clinton(*) and Washington
Counties have no towers in them. I strip right down the middle of these
counties.

BUT....
T227 Taylorville probably helps cover northern Montgomery.
T226 Lakewood helps cover northern/eastern Montgomery.
T324 Nilwood helps cover northern, central Montgomery.
T307 Plainview seems to have good coverage on I-55 (Montgomery)
T312 Mt Olive helps cover Montgomery and Bond County.
T330 Vandalia helps cover southern/eastern Montgomery & Bond.
T325 Edwardsville helps cover Bond and Clinton.
*T314 Junction City helps cover Clinton & Marion (on the border of both)
T301 Mascoutah helps cover northern/western Washington and
western/southern Clinton
T305 Belleville may helps cover northern/western Washington and
western/southern Clinton
T331 Mt Vernon helps cover eastern Washington County
T318 DuQuoin helps cover southern Washington County
T349 Sparta may help cover southwestern Washington County

& T359 St Clair County Simulcast can help pick up Washington & Clinton
if needed

So, all that really doesn't help anyone.... but heck is was fun to
investigate!
Just appears that portable coverage would be pretty bad in many places
of those counties.
(not that is has been said it ever would be in those areas)

Have fun!

3161. "New" Tower 147?

Yahoo group: StarCom21
Date: 2009-02-10 21:56:58 UTC
From: Mike Curtis (KC)
Topic: 3161 Message: 3161

Here on T140 (Ottawa) I'm seeing a new "adjacent site" of T147 with a control channel of 866.5500 ... This is curious because in January, I observed that T112 (Belvidere) was now reporting itself as T147, but 866.5500 is not a frequency I've seen on the Belvidere tower, nor is it even licensed to the state. A quick check of the FCC licenses shows it belonging to MetCAD.

I might be up in that area later in the week so I'll see if I can find out more.

Oh you know you're right ... I read my notes wrong :) Sorry about that.

This got me thinking so I looked through a couple other towers I logged on Friday and found T125 (Morris) and T126 (Kane County) showing T147 with a control channel of 00-0000 (851.00625) so perhaps this is the DeKalb City site (even though the current CC doesn't match the licensed frequencies)? T126 was still showing T148 with the "old" T112 control channel so maybe that's a permanent change?

MetCAD? Hmm, long way from Champaign County.

It could be related to the ILEAS effort. Champaign County leased the old nursing home to ILEAS and had it remodeled for them to use on a long-term lease. Maybe MetCAD is handling communications for ILEAS also. They do quite a bit of training around here, so maybe something in the Ottawa area is needed farther afield?

Pro96Com ... http://psredit.com/pro96com/index.html .

It's a piece of software that lets you monitor the output of P25 control channels when using one of a couple different types of scanners.

Pro96Com … http://psredit. com/pro96com/ index.html
.

It's a piece of software that lets you monitor the output of P25
control channels when using one of a couple different types of scanners.

Hi KC,

What program is associated with the data you published? I'm interested in the
"neighboring towers" information.

Thanks!

From: Mark Loewe
Topic: 3165 Message: 3169

Okay, I have a question.

How does the stream get from the radio to the computer? Would a discriminator tapped radio be able to use ProCom96?

TIA, Mark

Yahoo group: StarCom21
Date: 2009-02-12 00:55:58 UTC
From: SC21
Topic: 3165 Message: 3170

Thanks for the update. It has been updated on RR.

*NOTES: From the neighboring site info, the following have changed
control channels to what was listed on RadioReference.com*

*148 -- 868.3375
136 -- 774.56875*

I am assuming the neighbor listed as:

034,"T0022",

140,"00-2533",866.83750,""

is supposed to be T134, Ottawa, matching control channel.

So, the T147 frequencies are the PRE-rebanding frequencies not the post
rebanding frequencies

License Application:

Frequencies ARE licensed as:

Yeah that's T134 Ottawa ... There seems to be something in the SC21
system that throws off the tower ID sometimes for neighbors.

So, be prepared for a reband of these. Not sure why the 866/867 are even

in use.

PRO-164 - $169.95 ($50 off!)
PRO-137 - $169.95 ($10 off!)

These great trunking and digital trunking scanners are available for a limited time at amazing prices, up to 20% off their regular retail price. Note that quantities may be limited. RadioShack is a registered trademark.

Scanner Stand for 4 Base Scanners

(http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4130430&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FDesk_Mount_for_Four_Base_Scanners_p%2F01-531337.htm%26Click%3D69314)This new 4-scanner Desk Mount (http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4130430&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FDesk_Mount_for_Four_Base_Scanners_p%2F01-531337.htm%26Click%3D69314), built with strong sheet-metal, allows you to attractively mount and display between one and four base or base/mobile scanners that are approximately 7 to 7.5" wide. You can mount any combination of the following Uniden Bearcat Scanners: 760, 780, 785, 796, BCT15,

BCD996T; GRE PSR400 and PSR600; and a variety of Radio Shack models including the 2053 and 2096 and similar models. Space between the scanners allows the audio from the speaker to be clearly heard. Stands for two and three base scanners (http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4130430&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FBrackets_Mounts_s%2F38.htm%26Click%3D69314) are also available. Our portable scanner stands (http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4130430&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannermaster.com%2FBrackets_Mounts_s%2F38.htm%26Click%3D69314) accept either one, two or three portable scanners of different sizes, shapes and from a variety of manufacturers.

Nashua NH Re-Bands!

The city of Nashua New Hampshire has just re-banded their Motorola trunking radio system, completely changing their frequencies and requiring, for Uniden (digital) TrunkTracker users, a firmware update to their scanners (re-banding updates are available now for many Uniden models through Uniden.com). Information on GRE firmware and re-banding can be found at www.greamerica.com (http://www.greamerica.com). Without the re-banding update and programming of the new frequencies you will no longer be able to hear Nashua, and other re-banded system, unless you listen in conventional mode, but then you will be unable to follow conversations. It's like going back to the dark ages of scanning in the early 1990's!

If you live in the Nashua area, or if you live in just about any area with Motorola trunking, and you have older TrunkTrackers, such as the BC780 or most RadioShack models before the PRO-96 and 2096, you will almost certainly have to purchase newer scanners that are capable of re-banding if you want to be able to continue to monitor and track these Motorola trunking systems.

Check us out at Scannermaster.com for our full line of every trunking scanner (Uniden-Bearcat, GRE, RadioShack) on the market today! Also see this excellent page for further information (http://click.icptrack.com/icp/relay.php?r=1028900971&msgid=4130430&act=9X1Y&c=34101&admin=0&destination=http%3A%2F%2Fwww.scannewengland.net%2Fwiki%2Findex.php%2FNashua_NH_Trunk_System).

3173. Re: [StarCom21] Re: [ScanMetroStLouis] Possible New SC21 site in metro east

Yahoo group: StarCom21
Date: 2009-02-12 04:18:08 UTC
From: SC21
Topic: 3159 Message: 3173

From the Starcom21 thread on the Illinois Forum of RadioReference.com:

I've been hearing three towers with a very strong signal in Clinton county for the past few months. I've been listening to ISP District 11 and 13 on these towers. Today, I also noticed new 800 Mhz antennas on all New Baden police cars. While monitoring the three towers this evening, I heard what sounded like the Clinton County Sheriff testing out the system from their cars (clearly on all three towers). One person mentioned they now have access to six new ISP channels including the three Detail channels (I assume that the other three are Dispatch A, Dispatch B, and Dispatch C), but from their conversation it sounds like they are still very unfamiliar with the system so I'm guessing this is their first day using it. The talkgroup being used was 7901, which I could not locate anywhere on RR. I guessing that once they get radios in all their cars that they will switch from their current VHF channels to Starcom21. They seem to still be using their VHF frequencies for all their normal traffic and it isn't being rebroadcast on Starcom21.

The three towers I found have an ID of 14E on my Pro-106 and the control channels are as follows:
775.340625
775.346875
775.343750

I'll keep monitoring and try and record their voice frequencies and post them later, but early indications seem to indicate that all three controls channels all link to the same voice frequencies, although I'm not getting any of the distortion common on simulcast systems.

So....
775.346875 is actually T301 775.34375c, which was the new control channel found on Tuesday.
775.340625 is unknown, possibly just too close to the transmitter.
301 Mascoutah [St Clair] [A800]
</apps/db/?action=siteInfo&siteId=9250> 774.03125 774.56875a

775.28125 775.34375c 775.53125 775.78125 855.16250 859.33750

The hex ID of 14E does NOT match 301's hex which is 12d
System Name: * StarCom21 - Illinois -- 700/800 MHz (Statewide P25)
</apps/db/?sid=2324>
Location: Statewide, Illinois
*Site Number: * Decimal: 301 / Hex: 12d

14E is.. ???

I'm not even sure that the Hex numbers on RR is even correct, compared
to what is listed on CARMA profile.

OK, well ISP/SC21 has had 3 locations in St Clair County that duplicate the same sites that are also simulcast towers for T359 the St Clair County sites.
Locations are East St Louis (323 or 353), Mascoutah (301) and Belleville 305. The state transmitters are located on the same tower/site as the county simulcast system.

Those you will hear ISP and other counties traffic and normally no St Clair County Traffic.

I'm assuming you are using a Radio Shack or GRE and can't give a decimal site number? (You had a 14E ?)

Now, Tower 301 which has been the Mascoutah (formerly called "Fayetteville" on the database), is showing a control channel of 775.34375 as I am typing.

It is very possible that ISP changed locations and moved it to Trenton/Albers.... that we wont' know unless someone goes out searching for the signal. The 700 MHz sites do not have to be specifially site licensed. I had reported about a month ago, I had a feeling there was a new Clinton County site coming. So, doing like you said, if you make a trip, that may help us out.

It makes sense to move the Mascoutah site to Trenton. Very possibly what they did.

Quote:

I also monitored this control channel a little more and found voice channels on 775.806250 and 775.556250. Neither of these voice channels are assigned to Mascoutah. I did find both voice channels listed as belonging to the Waterloo site,

Well, often when the Control Channel of a 700 MHz site changes, the voice channels change too. Up to this week, the T301 site control channel was different and had other voice channels.

Also, on the 700 MHz sites listed on RadioReference.com database, the voice channels are usually only known if someone has ran a computer program, or monitors the sites and notes them like you just did. The ones listed are probably old, and no one has reported the new voice channels lately.

You're doing good so far! If you get the time, go investigate.

On Monday or Tuesday night, I heard the ISP Radio Techs talking about how well the "tower" (didn't say which one) was getting into Addieville and Nashville. Changing a control channel wouldn't neccesarily make it any better, but changing the physical location sure would!

Clinton County going digital

I might agree that a couple of the control channels I listed may just be harmonics; however, I disagree that 775.34375 is a new control channel at Mascoutah. Mascoutah (Mid-America Airport) is probably on the St. Clair County simulcast and would broadcast St. Clair county traffic.

I'm not hearing any St. Clair county traffic on 775.34375. What I do hear is lots of ISP, both District 11 (Collinsville) and District 13 (DuQuoin). I also occasional hear the Madison county sheriff (talkgroup 7315) so I assume I pick them up only when they are near this tower. I don't believe I would hear either DuQuoin or the Madison county sheriff if the tower were in Mascoutah. My guess is that this control channel is broadcasting from a tower in either Trenton or Albers, although I would lean towards Albers since they have a large AmerenIP tower there. Albers is also within 10 miles of both Madison county and Washington county (which is part of District 13). I guess I can try to determine it this is true by removing the antenna from my scanner and driving to both Albers and Trenton and see if I can still receive this CC.

I also monitored this control channel a little more and found voice channels on 775.806250 and 775.556250. Neither of these voice channels are assigned to Mascoutah. I did find both voice channels listed as belonging to the Waterloo site, but Waterloo is over 50 miles from

my house and there's no way I'm monitoring that site.

I just saw Mike's message.
I am finding T147 using 851.5500 as a control ch.(T126 is
conferming this also)
Other ch. in use. 851.2000 ivd, 851.8000 avd, 852.6000 avd.
all other info Mike posted is the same.Signal is great here in Elburn.

Kris
